Modern Optimization Techniques with Applications in Electric Power Systems Soliman Abdel-Hady Soliman, Abdel-Aal Hassan Mantawy, 2011-12-14 This book presents the application of some AI related optimization techniques in the operation and control of electric power systems With practical applications and examples the use of functional analysis simulated annealing Tabu search Genetic algorithms and fuzzy systems for the

optimization of power systems is discussed in detail Preliminary mathematical concepts are presented before moving to more advanced material Researchers and graduate students will benefit from this book Engineers working in utility companies operations and control and resource management will also find this book useful Mechatronics '98 J. Adolfsson, J. Karlsén, 1998-08-28 Mechatronics a synergistic combination of mechanical electronic and computing engineering technologies is a truly multidisciplinary approach to engineering New products based on mechatronic principles are demonstrating reduced mechanical complexity increased performance and often previously impossible capabilities This book contains the papers presented at the UK Mechatronics Forum s 6th International Conference held in Skövde Sweden in September 1998 Many of these high quality papers illustrate the tremendous influence of mechatronics on such areas as manufacturing machinery automotive engineering textiles manufacture robotics and real time control and vision systems There are also papers describing developments in sensors actuators control and data processing techniques such as fuzzy logic and neural networks all of which have practical application to mechatronic systems *Fuzzy Rule-Based Inference* Fangyi Li, Qiang Shen, 2024-04-08 This book covers a comprehensive approach to the development and application of a suite of novel algorithms for practical approximate knowledge based inference It includes an introduction to the fundamental concepts of fuzzy sets fuzzy logic and fuzzy inference Collectively this book provides a systematic tutorial and self contained reference to recent advances in the field of fuzzy rule based inference Approximate reasoning systems facilitate inference by utilizing fuzzy if then production rules for decision making under circumstances where knowledge is imprecisely characterized Compositional rule of inference CRI and fuzzy rule interpolation FRI are two typical techniques used to implement such systems The question of when to apply these potentially powerful reasoning techniques via automated computation procedures is often addressed by checking whether certain rules can match given observations Both techniques have been widely investigated to enhance the performance of approximate reasoning Increasingly more attention has been paid to the development of systems where rule antecedent attributes are associated with measures of their relative significance or weights However they are mostly implemented in isolation within their respective areas making it difficult to achieve accurate reasoning when both techniques are required simultaneously This book first addresses the issue of assigning equal significance to all antecedent attributes in the rules when deriving the consequents It presents a suite of weighted algorithms for both CRI and FRI fuzzy inference mechanisms This includes an innovative reverse engineering process that can derive attribute weightings from given rules increasing the automation level of the resulting systems An integrated fuzzy reasoning approach is then developed from these two sets of weighted improvements showcasing more effective and efficient techniques for approximate reasoning Additionally the book provides an overarching application to interpretable medical risk analysis thanks to the semantics rich fuzzy rules with attribute values represented in linguistic terms Moreover it illustrates successful solutions to benchmark problems in the relevant literature demonstrating the

practicality of the systematic approach to weighted approximate reasoning An Intelligent Inspection Planning System for Prismatic Parts on CMMs Slavenko M. Stojadinović, Vidosav D. Majstorović, 2019-02-09 This book examines an intelligent system for the inspection planning of prismatic parts on coordinate measuring machines CMMs The content focuses on four main elements the engineering ontology the model of inspection planning for prismatic parts on CMMs the optimisation model of the measuring path based on an ant colony approach and the model of probe configuration and setup planning based on a genetic algorithm The model of inspection planning for CMMs developed here addresses inspection feature construction the sampling strategy probe accessibility analysis automated collision free operation and probe path planning The proposed model offers a novel approach to intelligent inspection while also minimizing human involvement and thus the risk of human error through intelligent planning of the probe configuration and part setup The advantages of this approach include reduced preparation times due to the automatic generation of a measuring protocol potential optimisation of the measuring probe path i e less time needed for the actual measurement and increased planning process autonomy through minimal human involvement in the setup analysis and probe configuration Recent Advances in Decision Making Elisabeth Rakus-Andersson, Ronald R.
