With Hints and Solutions

PETER GNÄDIG, GYULA HONYEK & KEN RILEY

What would be the high jump record on the Moon?
How long would it take to defeat an eight-tonne Siberian mammoth?
How deep is an electron lying in a box?
How long does it take to determine the period of a sand-glass egg timer?
Why does a wheel always turn in the direction it does?
How does the time taken for a person stood on its point depend on friction?

200 Puzzling Physics Problems:

200 Puzzling Physics Problems P. Gnädig, G. Honyek, Kenneth Franklin Riley, 2001-08-13 This book will strengthen a student's grasp of the laws of physics by applying them to practical situations and problems that yield more easily to intuitive insight than brute force methods and complex mathematics. These intriguing problems, chosen almost exclusively from classical non quantum physics, are posed in accessible non technical language requiring the student to select the right framework in which to analyse the situation and decide which branches of physics are involved. The level of sophistication needed to tackle most of the two hundred problems is that of the exceptional school student, the good undergraduate or competent graduate student. The book will be valuable to undergraduates preparing for general physics papers. It is hoped that even some physics professors will find the more difficult questions challenging. By contrast, mathematical demands are minimal and do not go beyond elementary calculus. This intriguing book of physics problems should prove instructive, challenging and fun.

The Ultimate Book of Saturday Science Neil A. Downie, 2012-05-13 The best backyard experiments for hands-on science learning. The Ultimate Book of Saturday Science is Neil Downie's biggest and most astounding compendium yet of science experiments you can do in your own kitchen or backyard using common household items. It may be the only book that encourages hands-on science learning through the use of high-velocity air-driven carrots. Downie, the undisputed maestro of Saturday science, here reveals important principles in physics, engineering, and chemistry through such marvels as the Helevator, a contraption that's half-helicopter, half-elevator, and the Rocket Railroad, which pumps propellant up from its own track. The Riddle of the Sands demonstrates why some granular materials form steep cones when poured, while others collapse in an avalanche. The Sunbeam Exploder creates a combustible delivery system out of sunlight, while the Red Hot Memory experiment shows you how to store data as heat. Want to learn to tell time using a knife and some butter? There's a whole section devoted to exotic clocks and oscillators that teaches you how. The Ultimate Book of Saturday Science features more than seventy fun and astonishing experiments that range in difficulty from simple to more challenging. All of them are original, and all are guaranteed to work. Downie provides instructions for each one and explains the underlying science, and also presents experimental variations that readers will want to try. **Student Solution Manual for Essential Mathematical Methods for the Physical Sciences** K.
