The Realities of Reality - Part II: Making Sense of Why Modern Science Advances (Volume 1) Fritz Dufour, MBA, DESS, 2018-09-19 This Volume 1 of Part II considers the factors that make science progress. It lays out the differences between normal science and pseudoscience by showing the importance of the scientific method in the advancement of science. It introduces the concept of Truth in science by raising the point that even though truth is based on the scientific method, can science be true? Can it depict reality? The author focuses on modern science which he thinks was born thanks to the Scientific Revolution which started with Galileo Galilei and led to the Industrial Revolution. The impacts of the latter are analyzed in light of modernism, modernization, and modernity, all three linked to scientific progress. The book also talks about the Newtonian scientific leap by analyzing particularly the then social and political fabrics of England and Albert Einstein by showing how he changed history. According to the author, our very physical world can help us understand scientific progress. So he explains among other things the structure of atoms and molecules, the role of physics in the understanding of our universe, Quantum Mechanics, and the importance of Higgs Boson. On the other hand, the book is a stunning revelation of how important information is to scientific progress. To make his point, the author first talks about John Vincent Atanasoff as the Father of computer thanks to the invention of his ABC computer, and then Alan Turing as the Father of modern computer thanks to his Turing Test and his views on Artificial Intelligence. Both men played a momentous role in the Digital Revolution and in the Information Age according to the book. Finally, the author talks about nanotechnology which explores the world of small meaning at the atomic and the molecular levels and is an inescapable tool in the molecular biology revolution which itself is an important factor in scientific progress and in transhumanism or human enhancement defined as the ideology according to which man can surpass his present state by improving his genetic material.

The Realities of 'Reality' - Part II: Making Sense of Why Modern Science Advances (Volume 2 of 2) Fritz Dufour, MBA, DESS, 2019-03-23 The difference between Part I and Part II Volumes 1 & 2 of this series is that in Part I the author showed how what we call reality starts with the inner self, whereas Part II describes what in fact impacts and modifies the environment or reality and what are the factors behind that dynamics. What impacts and modifies the environment is science. This Volume 2 starts by showing how technology plays an important role in scientific progress. Although the relationship between the two is symbiotic, science can exist without technology, but technology desperately needs science. Military technology is an example of how technology can help science advance. Some military inventions end up having civilian use. Science being at the center of society, the book makes the case for the direct impact of such social sciences as politics and economics on the advancement of science. Politics, says the author, influences science because of uncertainty in science, and economics does it thanks to the availability of money to scholars and scientists for their research. On the other hand, government also influences scientific progress through regulations. The book gives cyberspace regulation as an example. Furthermore, by showing how art influences science, the

author really argues for the polyfactorial aspect of scientific progress In that line of thought he goes on to also prove that factors such as skepticism curiosity and the quest for knowledge greatly influence the advancement of science That says the author is a ninety degree turn By ending Part two that way I wanted to somehow link it to Part I which argues that reality starts from within

Epistemology or the Theory of Knowledge, 2 Volumes P. Coffey,2009-01-01 P Coffey was Professor of Logic and Metaphysics at Maynooth College Ireland His works include Ontology or the Theory of Being **What Is Reality?** Ross Inman,2024-10-08 In this introduction to metaphysics Ross Inman introduces us to the tradition of metaphysics in Western philosophy what it means to do metaphysics as a Christian and considers timeless and universal inquiries into central topics of metaphysics identity necessity and possibility properties universals substances and parts and wholes **Thinking in Opposites** Paul Roubiczek,2024-03-08 First published in 1952 Thinking in Opposites insists on the need for a carefully thought out rather than a merely authoritarian basis for faith but also insists that an indispensable preliminary is to know the laws which govern and limit the scope of human thinking in relation to three areas the external world as it is the internal world of feeling and the interrelation of each of these with the other This book is not a technical work in philosophy and the theory of knowledge but it deals with problems in those fields which have usually been handled only in technical language Therefore this is a book both for the expert and for the intelligent and thoughtful layman for the man who has a sense of responsibility for what he believes and who is able to justify his faith amid the chaos of our times **Stepping into Virtual Reality** Mario Gutierrez,F. Vexo,Daniel Thalmann,2008-03-29 Virtual reality techniques are increasingly becoming indispensable in many areas This book looks at how to generate advanced virtual reality worlds It covers principles

Glick,George Darby,Anna Marmodoro,2020 Are space and time fundamental features of our world or might they emerge from something else The Foundation of Reality brings together metaphysicians and philosophers of physics working on space time and fundamentality to address this timely question Recent developments in the interpretation of quantum mechanics and the understanding of certain approaches to quantum gravity have led philosophers of physics to propose that space and time might be emergent rather than fundamental But such discussions are often conducted without engagement with those working on fundamentality and related issues in contemporary metaphysics This book aims to correct this oversight The diverse contributions to this volume address topics including the nature of fundamentality the relation of space and time to quantum entanglement and space and time in theories of quantum gravity Only through consideration of a range of different approaches to the topic can we hope to get clear on the status of space and time in our contemporary understanding of physical reality A Theory of Reality George Trumbull Ladd,1899

Cognitive Aspects of Virtual Reality Ildikó Horváth,Borbála Berki,Anna Sudár,Ádám Csapó,Péter Baranyi,2024-11-16 This book outlines a range of user experiments providing comprehensive evaluations that underline the rationale behind implementing collaborative 3D virtual offices in corporate settings and 3D classrooms in educational institutions In this book radically new scientific approaches are taken for studying user effectiveness in the realm of 3D graphical interfaces The emergence of VR is seen in the book as a pivotal moment in the evolution of information technology marking a shift from the era of DOS and Windows to immersive digital spaces Through extensive research and experimentation it is convincingly demonstrated that integrating 2D user interfaces such as windows images and 2D widgets into 3D digital environments significantly enhances user effectiveness in terms of online collaboration memory recall and comprehension of complex workflows Moreover valuable advice and design principles are offered to guide the creation of such working 3D digital environments The Ontological Criteria of Reality Timo Airaksinen,1975
