D-modules And Microlocal Geometry:

D-modules and Microlocal Calculus Masaki Kashiwara, 2003 The original title of this work translated as Foundation of Algebraic Analysis Kashiwara Kyoto U Japan changed the title to more precisely reflect the nature of the text's contents and to signal his belief that the microlocal point of view helps concrete calculations as powerfully as the Cauchy integral formula provides the values of many definite integrals Chapters cover basic properties of D modules characteristic varieties construction of D modules their functorial properties regular holonomic systems b functions ring of formal microdifferential operators microlocal analysis of holonomic systems and microlocal calculus of b functions Translated from the Japanese work Daisu Kaiseki Gairon 2000 Annotation copyrighted by Book News Inc Portland OR **D-Modules and Microlocal**

Geometry Masaki Kashiwara, Teresa Monteiro Fernandes, Pierre Schapira, 2011-06-15 The series is aimed specifically at publishing peer reviewed reviews and contributions presented at workshops and conferences Each volume is associated with a particular conference symposium or workshop These events cover various topics within pure and applied mathematics and provide up to date coverage of new developments methods and applications **D-Modules, Perverse Sheaves, and**

Representation Theory Kiyoshi Takeuchi, Ryoshi Hotta, Toshiyuki Tanisaki, 2007-10-12 D modules continues to be an active area of stimulating research in such mathematical areas as algebraic analysis differential equations and representation theory Key to D modules Perverse Sheaves and Representation Theory is the authors essential algebraic analytic approach to the theory which connects D modules to representation theory and other areas of mathematics To further aid the reader and to make the work as self contained as possible appendices are provided as background for the theory of derived categories and algebraic varieties The book is intended to serve graduate students in a classroom setting and as self study for researchers in algebraic geometry representation theory **Geometric Aspects of Dwork Theory** Alan

Adolphson, Francesco Baldassarri, Pierre Berthelot, Nicholas Katz, Francois Loeser, 2008-08-22 This two volume book collects the lectures given during the three months cycle of lectures held in Northern Italy between May and July of 2001 to commemorate Professor Bernard Dwork 1923 1998 It presents a wide ranging overview of some of the most active areas of contemporary research in arithmetic algebraic geometry with special emphasis on the geometric applications of the p adic analytic techniques originating in Dwork's work their connection to various recent cohomology theories and to modular forms The two volumes contain both important new research and illuminating survey articles written by leading experts in the field The book will provide an indispensable resource for all those wishing to approach the frontiers of research in arithmetic algebraic geometry *Differential Equations on Complex Manifolds* Boris Sternin, Victor Shatalov, 2013-03-09 The

present monograph is devoted to the complex theory of differential equations Not yet a handbook neither a simple collection of articles the book is a first attempt to present a more or less detailed exposition of a young but promising branch of mathematics that is the complex theory of partial differential equations Let us try to describe the framework of this theory

First simple examples show that solutions of differential equations are as a rule ramifying analytic functions and hence are not regular near points of their ramification. Second bearing in mind these important properties of solutions we shall try to describe the method solving our problem. Surely one has first to consider differential equations with constant coefficients. The apparatus solving such problems is well known in the real theory of differential equations: this is the Fourier transformation. Unfortunately such a transformation had not yet been constructed for complex analytic functions and the authors had to construct by themselves. This transformation is of course the key notion of the whole theory.

Analysis, Geometry, Number Theory: The Mathematics of Leon Ehrenpreis Eric Grinberg, 2000. This book presents the proceedings from the conference honoring the work of Leon Ehrenpreis. Professor Ehrenpreis worked in many different areas of mathematics and found connections among all of them. For example, one can find his analytic ideas in the context of number theory, geometric thinking within analysis, transcendental number theory applied to partial differential equations, and more. The conference brought together the communities of mathematicians working in the areas of interest to Professor Ehrenpreis and allowed them to share the research inspired by his work. The collection of articles here presents current research on PDEs, several complex variables, analytic number theory, integral geometry, and tomography. The work of Professor Ehrenpreis has contributed to basic definitions in these areas and has motivated a wealth of research results. This volume offers a survey of the fundamental principles that unified the conference and influenced the mathematics of Leon Ehrenpreis.

Analysis of Dirac Systems and Computational Algebra Fabrizio Colombo, Irene Sabadini, Franciscus Sommen, Daniele C. Struppa, 2012-12-06. The main treatment is devoted to the analysis of systems of linear partial differential equations (PDEs) with constant coefficients, focusing attention on null solutions of Dirac systems. All the necessary classical material is initially presented. Geared toward graduate students and researchers in hypercomplex analysis, Clifford analysis, systems of PDEs with constant coefficients, and mathematical physics.

New Trends in Microlocal Analysis J.-M. Bony, M. Morimoto, 2012-12-06. Microlocal analysis began around 1970 when Mikio Sato, along with coauthors Masaki Kashiwara and Takahiro Kawai, wrote a decisive article on the structure of pseudodifferential equations, thus laying the foundation of D -modules and the singular spectrums of hyperfunctions. The key idea is the analysis of problems on the phase space, i.e., the cotangent bundle of the base space. Microlocal analysis is an active area of mathematical research that has been applied to many fields such as real and complex analysis, representation theory, topology, number theory, and mathematical physics. This volume contains the presentations given at a seminar jointly organized by the Japan Society for the Promotion of Science and

Centre National des Recherches Scientifiques entitled New Trends in Microlocal Analysis The book is divided into three parts partial differential equations and mathematical analysis mathematical physics and algebraic analysis D modules and sheave theory The large variety of new research that is covered will prove invaluable to students and researchers alike The Langlands Classification and Irreducible Characters for Real Reductive Groups J. Adams,D. Barbasch,D.A. Vogan,2012-12-06 This monograph explores the geometry of the local Langlands conjecture The conjecture predicts a parametrizations of the irreducible representations of a reductive algebraic group over a local field in terms of the complex dual group and the Weil Deligne group For p adic fields this conjecture has not been proved but it has been refined to a detailed collection of conjectural relationships between p adic representation theory and geometry on the space of p adic representation theory and geometry on the space of p adic Langlands parameters This book provides an introduction to some modern geometric methods in representation theory It is addressed to graduate students and research workers in representation theory and in automorphic forms **Geometric Methods in Algebra and Number Theory** Fedor Bogomolov,Yuri Tschinkel,2006-06-22 Contains a selection of articles exploring geometric approaches to problems in algebra algebraic geometry and number theory The collection gives a representative sample of problems and most recent results in algebraic and arithmetic geometry Text can serve as an intense introduction for graduate students and those wishing to pursue research in algebraic and arithmetic geometry **Analytic D-Modules and Applications** Jan-Erik Björk,2013-06-29 This is the first monograph to be published on analytic D modules and it offers a complete and systematic treatment of the foundations together with a thorough discussion of such modern topics as the Riemann Hilbert correspondence Bernstein Sata polynomials and a large variety of results concerning microdifferential analysis Analytic D module theory studies holomorphic differential systems on complex manifolds It brings new insight and methods into many areas such as infinite dimensional representations of Lie groups asymptotic expansions of hypergeometric functions intersection cohomology on Kahler manifolds and the calculus of residues in several complex variables The book contains seven chapters and has an extensive appendix which is devoted to the most important tools which are used in D module theory This includes an account of sheaf theory in the context of derived categories a detailed study of filtered non commutative rings and homological algebra and the basic material in symplectic geometry and stratifications on complex analytic sets For graduate students and researchers **The Mathematics of Superscillations** Yakir Aharonov,Fabrizio Colombo,Irene Sabadini,Daniele C. Struppa,Jeff Tollaksen,2017-04-25 In the past 50 years quantum physicists have discovered and experimentally demonstrated a phenomenon which they termed superscillations Aharonov and his collaborators showed that superscillations naturally arise when dealing with weak values a notion that provides a fundamentally different way to regard measurements in quantum physics From a mathematical point of view superscillating functions are a superposition of small Fourier components with a bounded Fourier spectrum which result when appropriately summed in a shift that can be arbitrarily

large and well outside the spectrum The purpose of this work is twofold on one hand the authors provide a self contained survey of the existing literature in order to offer a systematic mathematical approach to superoscillations on the other hand they obtain some new and unexpected results by showing that superoscillating sequences can be seen of as solutions to a large class of convolution equations and can therefore be treated within the theory of analytically uniform spaces In particular the authors will also discuss the persistence of the superoscillatory behavior when superoscillating sequences are taken as initial values of the Schrödinger equation and other equations

Commutative Algebra and its Interactions to Algebraic Geometry Nguyen Tu CUONG, Le Tuan HOA, Ngo Viet TRUNG, 2018-08-02 This book presents four lectures on recent research in commutative algebra and its applications to algebraic geometry Aimed at researchers and graduate students with an advanced background in algebra these lectures were given during the Commutative Algebra program held at the Vietnam Institute of Advanced Study in Mathematics in the winter semester 2013/2014 The first lecture is on Weyl algebras certain rings of differential operators and their D modules relating non commutative and commutative algebra to algebraic geometry and analysis in a very appealing way The second lecture concerns local systems their homological origin and applications to the classification of Artinian Gorenstein rings and the computation of their invariants The third lecture is on the representation type of projective varieties and the classification of arithmetically Cohen Macaulay bundles and Ulrich bundles Related topics such as moduli spaces of sheaves liaison theory minimal resolutions and Hilbert schemes of points are also covered The last lecture addresses a classical problem how many equations are needed to define an algebraic variety set theoretically It systematically covers and improves recent results for the case of toric varieties

Discriminants, Resultants, and Multidimensional Determinants Israel M. Gelfand, Mikhail Kapranov, Andrei Zelevinsky, 2009-05-21 This book revives and vastly expands the classical theory of resultants and discriminants Most of the main new results of the book have been published earlier in more than a dozen joint papers of the authors The book nicely complements these original papers with many examples illustrating both old and new results of the theory Mathematical Reviews

Integral Geometry Methods in the Geometrical Langlands Program Prof. Dr. Francisco Bulnes, 2016-06-08 The book is divided on the studied aspects in integral geometry and that are of interest in field theory at least to the solution or obtaining of integrals to the field equations corresponding to the moduli stacks planted In the chapters 1 2 3 4 are exposed the generalizations of the Penrose transforms with a good D modules theory in the derived categories context and their deformations In the chapters 5 and 6 are exposed and discussed the different classification problems and their implications in the differential operators to the field equations Finally in the chapters 7 and 8 are exposed the aspects of the geometrical ramification of field ramification going behind the holomorphicity In the end of the book are included several research exercises that can be discussed and exposed inside postgraduate courses in derived geometry or related as derived categories or categories on commutative and non commutative rings

Operator Algebras and Geometry , The book is aimed at researchers and

graduate students working in differential topology differential geometry and global analysis who are interested in learning about operator algebras

This book is aimed to provide an introduction to local cohomology which takes cognizance of the breadth of its interactions with other areas of mathematics. It covers topics such as the number of defining equations of algebraic sets, connectedness properties of algebraic sets, connections to sheaf cohomology and to de Rham cohomology, Gröbner bases in the commutative setting as well as for D -modules, the Frobenius morphism and characteristic p methods, finiteness properties of local cohomology modules, semigroup rings and polyhedral geometry and hypergeometric systems arising from semigroups. The book begins with basic notions in geometry, sheaf theory and homological algebra leading to the definition and basic properties of local cohomology. Then it develops the theory in a number of different directions and draws connections with topology, geometry, combinatorics and algorithmic aspects of the subject.
