Cloning Stephen D. Fairbanks, 2004 The terms recombinant DNA technology DNA cloning molecular cloning or gene cloning all refer to the same process the transfer of a DNA fragment of interest from one organism to a self replicating genetic element such as a bacterial plasmid The DNA of interest can then be propagated in a foreign host cell This technology has been around since the 1970s and it has become a

common practice in molecular biology labs today Reproductive cloning is a technology used to generate an animal that has the same nuclear DNA as another currently or previously existing animal Dolly was created by reproductive cloning technology In a process called somatic cell nuclear transfer SCNT scientists transfer genetic material from the nucleus of a donor adult cell to an egg whose nucleus and thus its genetic material has been removed The reconstructed egg containing the DNA from a donor cell must be treated with chemicals or electric current in order to stimulate cell division Once the cloned embryo reaches a suitable stage it is transferred to the uterus of a female host where it continues to develop until birth Therapeutic cloning also called embryo cloning is the production of human embryos for use in research The goal of this process is not to create cloned human beings but rather to harvest stem cells that can be used to study human development and to treat disease Stem cells are important to biomedical researchers because they can be used to generate virtually any type of specialised cell in the human body This new book presents an up to date Chronology of Cloning along with current and selected abstracts dealing with cloning as well as a guide to books on the topic Access to the abstract and books sections is provided by title subject and author indexes Clinical Surgery: A Practical Guide Qassim Baker,Munther

Factors Dieter Körholz,Wieland Kiess,2008-02-04 The immune system is a complex network in which different cell types and soluble factors interact to efficiently eliminate various kinds of microorganisms as well as aberrant cell clones The roots of immunologic investigations reach far into the past In 430 BC Thucydides reported that survivors of the plague did not present a second time with similar symptoms The first report of a successful immu therapy was made by Edward Jenner in 1798 who found a protective effect of cowpox vaccination against human pox Since then much knowledge has been accumulated today investigations of the molecular mechanisms of immune regulation are of central research interest The novel insights into gene polymorphisms and gene regulation gathered from this work has improved our knowledge of individual immune reactions and risk factors in overcoming infections Strategies to use the immune system for cancer treatment have been propelled by the discovery of divergent immunoregulatory cytokines and the introduction of new gene therapy strategies to modify immune responses Recently the discovery of various dendritic cells has focused attention on these cell types as central elements of the immune response and to the possibility of dendritic cell expansion maturation and consecutive stimulation with immuno active tumor specific peptides Similarly methods for ex vivo expansion of various stem cell derived cell types have led to an improved therapeutic management of various benign and malignant diseases

A Practical Guide to Global Point-of-Care Testing Mark Shephard OAM,2016-11 Point of care testing POCT refers to pathology testing performed in a clinical setting at the time of patient consultation generating a rapid test result that enables informed and timely clinical action to be taken on patient care It offers patients greater convenience and access to health services and helps to improve clinical outcomes POCT also provides innovative solutions for the detection and management of chronic acute and infectious diseases in settings including family practices Indigenous medical services community health facilities rural and remote areas and in developing countries where health care services are often geographically isolated from the nearest pathology laboratory A Practical Guide to Global Point of Care Testing shows health professionals how to set up and manage POCT services under a quality assured sustainable clinically and culturally effective framework as well as understand the wide global scope and clinical applications of POCT The book is divided into three major themes the management of POCT services a global perspective on the clinical use of POCT and POCT for specific clinical settings Chapters within each theme are written by experts and explore wide ranging topics such as selecting and evaluating devices POCT for diabetes coagulation disorders HIV malaria and Ebola and the use of POCT for disaster management and in extreme environments Figures are included throughout to illustrate the concepts principles and practice of POCT Written for a broad range of practicing health professionals from the fields of medical science health science nursing medicine paramedic science Indigenous health public health pharmacy aged care and sports medicine A Practical Guide to Global Point of Care Testing will also benefit university students studying these health related disciplines

Diagnostic Virology Protocols John R. Stephenson,Alan Warnes,1998-08-28 A collection of cutting edge techniques for detecting most of the

major viruses that afflict mankind including influenza hepatitis herpes polio mumps HIV and many more The techniques are well tested easily reproducible and readily employ all the new technologies PCR RIA ELISA and latex agglutination that have revolutionized the field These methods not only make it possible to do the necessary analysis in hours instead of days but can also be automated in a laboratory having only low levels of biological containment Frequently the protocols for viruses causing human diseases can be adapted to similar viruses of veterinary importance Through its state of the art methods a physician can for the first time determine early in a viral infection which antiviral drug should be used and minimize the period of treatment to avoid unnecessary side effects

The Human Immunodeficiency Virus Emilio Emini, 2021-04-13

The past few years have witnessed an explosive increase in our collective knowledge of the biology of the human immunodeficiency virus HIV Researchers have acquired new understanding of the virus's biochemistry molecular biology pathogenesis genetics and immunobiology Resulting therapeutic advances have significantly prolonged the lives of thousands Yet the need to develop better therapies is ever more acute and given the virus's continued spread through the human population the need for an effective vaccine is urgent These goals can be accomplished only through the experienced synthesis of information from the many disciplines participating in HIV research and through the insights of new investigators This volume is designed to lower the barriers imposed on investigators by the sheer volume of available information information that often can be found only in far flung and specialized journals It provides in a single resource an in depth overview of the diverse areas that constitute HIV research The result is a broad introduction for students and researchers new to the field as well as an integrated overview for researchers specialized in particular areas of HIV investigation The volume will also benefit those seeking technical understanding of the virus's biology including physicians treating HIV infected patients Each chapter is a comprehensive presentation of one area of current AIDS research including work on the virus life cycle epidemiology genetics protease and reverse transcriptase inhibitors receptor and co receptor interactions therapeutic targets clinical treatment immunobiology and vaccines written by a leading researcher in that area The contributors are Jon P Anderson Jan Balzarini Elana Cherry Thomas J Coates Chris Collins Jon H Condra Mark B Feinberg Richard B Gaynor Matthias G Galle Daria J Hazuda Spyros Kalams Nathaniel R Landau Gerald H Learn Norman L Letvin James I Mullins Willscott E Naugler David Nickle Matthew Rain Allen G Rodrigo Daniel Shriner Shalom Spira Mario Stevenson Todd Summers Catherine Ulich Joseph P Vacca Mark A Wainberg Bruce D Walker and Yang Wang
