Document Computing Technologies For Managing Electronic Document Collections:

Document Computing Ross Wilkinson, 1998-11-30 Recommends technologies and techniques for document management with an emphasis on the processes that are appropriate when computers are used to create access and publish documents The authors believe effective management of the intellectual capital of an organization requires central repositories control over access to information consistent use of document formats and processes for workflow They describe the nature of documents and their components and structure examine how documents are used and controlled explore the factors affecting design and implementation of a document strategy and conclude with a case study from the Parliament of Tasmania

Integrative Document & Content Management Len

Asprey, Michael Middleton, 2003-01-01 Portals present unique strategic challenges in the academic environment Their conceptualization and design requires the input of campus constituents who seldom interact and whose interests are often opposite The implementation of a portal requires a coordination of applications and databases controlled by different campus units at a level that may never before have been attempted at the institution Building a portal is as much about constructing intra campus bridges as it is about user interfaces and content Designing Portals Opportunities and Challenges discusses the current status of portals in higher education by providing insight into the role portals play in an institution s business and educational strategy by taking the reader through the processes of conceptualization design and implementation of the portals in different stages of development at major universities and by offering insight from three producers of portal software systems in use at institutions of higher learning and elsewhere

Information Technology and Lawyers Arno R. Lodder, Anja Oskamp, 2006-03-06 The area of Information Technology and Lawyers is a fascinating one Both from a practical and an academic perspective the opportunities of applying Information Technology to law are tremendous At the same time however lawyers are amongst the most conservative professionals and traditional late adapters of technology Nowadays the gap between Information Technology and Lawyers is closing more and more in particular due to the Internet and the richness of legal sources that can be found online This book provides material to further bridge the gap by showing people with a legal background what is possible with Information Technology now and in the near future as well as by showing people with an IT background what opportunities exist in the domain of law Any lawyer should read this book about the current practice of IT in the legal domain and what is to be expected in the near future

Information Retrieval David A. Grossman, Ophir Frieder, 2012-11-12 Interested in how an efficient search engine works Want to know what algorithms are used to rank resulting documents in response to user requests The authors answer these and other key information retrieval design and implementation questions This book is not yet another high level text Instead algorithms are thoroughly described making this book ideally suited for both computer science students and practitioners who work on search related applications As stated in the foreword this book provides a current broad and detailed overview of the field and is the only one that does so Examples are used throughout to illustrate the algorithms The authors explain how a query is ranked against a document collection using either

a single or a combination of retrieval strategies and how an assortment of utilities are integrated into the query processing scheme to improve these rankings Methods for building and compressing text indexes querying and retrieving documents in multiple languages and using parallel or distributed processing to expedite the search are likewise described This edition is a major expansion of the one published in 1998 Besides updating the entire book with current techniques it includes new sections on language models cross language information retrieval peer to peer processing XML search mediators and duplicate document detection

Information Extraction: Algorithms and Prospects in a Retrieval Context Marie-Francine Moens, 2006-10-10 Currently there is a considerable interest in integrating the results of information extraction in retrieval systems because of the growing demand for search engines that return precise answers to flexible information queries Advanced retrieval models satisfy that need and they rely on tools that automatically build a probabilistic model of the content of a multi media document The book focuses on content recognition in text It elaborates on the past and current most successful algorithms and their application in a variety of domains e g news filtering mining of biomedical text intelligence gathering competitive intelligence legal information searching and processing of informal text An important part discusses current statistical and machine learning algorithms for information detection and classification and integrates their results in probabilistic retrieval models The book also reveals a number of ideas towards an advanced understanding and synthesis of textual content

Language Modeling for Information Retrieval W. Bruce Croft, John Lafferty, 2013-04-17 A statistical language model or more simply a language model is a probabilistic mechanism for generating text Such a definition is general enough to include an endless variety of schemes However a distinction should be made between generative models which can in principle be used to synthesize artificial text and discriminative techniques to classify text into predefined categories The first statistical language modeler was Claude Shannon In exploring the application of his newly founded theory of information to human language Shannon considered language as a statistical source and measured how well simple n gram models predicted or equivalently compressed natural text To do this he estimated the entropy of English through experiments with human subjects and also estimated the cross entropy of the n gram models on natural text The ability of language models to be quantitatively evaluated in this way is one of their important virtues Of course estimating the true entropy of language is an elusive goal aiming at many moving targets since language is so varied and evolves so quickly Yet fifty years after Shannon's study language models remain by all measures far from the Shannon entropy limit in terms of their predictive power However this has not kept them from being useful for a variety of text processing tasks and moreover can be viewed as encouragement that there is still great room for improvement in statistical language modeling

Advances in Information Retrieval W. Bruce Croft, 2006-04-11 The Center

for Intelligent Information Retrieval CIIR was formed in the Computer Science Department of the University of Massachusetts Amherst in 1992. The core support for the Center came from a National Science Foundation State Industry University Cooperative Research Center S IUCRC grant although there had been a sizeable information retrieval IR research group for over 10 years prior to that grant. The basic goal of these Centers is to combine basic research applied research and technology transfer. The CIIR has been successful in each of these areas in that it has produced over 270 research papers has been involved in many successful government and industry collaborations and has had a significant role in high visibility Internet sites and start ups. As a result of these efforts the CIIR has become known internationally as one of the leading research groups in the area of information retrieval. The CIIR focuses on research that results in more effective and efficient access and discovery in large heterogeneous distributed text and multimedia databases. The scope of the work that is done in the CIIR is broad and goes significantly beyond traditional areas of information retrieval such as retrieval models cross lingual search and automatic query expansion. The research includes both low level systems issues such as the design of protocols and architectures for distributed search as well as more human centered topics such as user interface design visualization and data mining with text and multimedia retrieval.

Charting a New Course: Natural Language Processing and Information Retrieval. John I. Tait, 2005-04-01 Karen Spärck Jones is one of the major figures of 20th century and early 21st Century computing and information processing. Her ideas have had an important influence on the development of Internet Search Engines. Her contribution has been recognized by awards from the natural language processing information retrieval and artificial intelligence communities including being asked to present the prestigious Grace Hopper lecture. She continues to be an active and influential researcher. Her contribution to the scientific evaluation of the effectiveness of such computer systems has been quite outstanding. This book celebrates the life and work of Karen Spärck Jones in her seventieth year. It consists of fifteen new and original chapters written by leading international authorities reviewing the state of the art and her influence in the areas in which Karen Spärck Jones has been active. Although she has a publication record which goes back over forty years it is clear even the very early work reviewed in the book can be read with profit by those working on recent developments in information processing like bioinformatics and the semantic web.

Perspectives on Content-Based Multimedia Systems Jian Kang Wu, Mohan S. Kankanhalli, Joo-Hwee Lim, Dezhong Hong, 2006-04-11 Multimedia data comprising of images audio and video is becoming increasingly common. The decreasing costs of consumer electronic devices such as digital cameras and digital camcorders along with the ease of transportation facilitated by the Internet has led to a phenomenal rise in the amount of multimedia data generated and distributed. Given that this trend of increased use of multimedia data is likely to accelerate there is an urgent need for providing a clear means of capturing storing indexing retrieving analyzing and summarizing such data. Content based access to multimedia data is of primary importance since it is the natural way by which human beings interact with such information. To facilitate the content based

access of multimedia information the first step is to derive feature measures from these data so that a feature space representation of the data content can be formed This can subsequently allow for mapping the feature space to the symbol space semantics either automatically or through human intervention Thus signal to symbol mapping useful for any practical system can be successfully achieved Perspectives on Content Based Multimedia Systems provides a comprehensive set of techniques to tackle these important issues This book offers detailed solutions to a wide range of practical problems in building real systems by providing specifics of three systems built by the authors While providing a systems focus it also equips the reader with a keen understanding of the fundamental issues including a formalism for content based multimedia database systems multimedia feature extraction object based techniques signature based techniques and fuzzy retrieval techniques The performance evaluation issues of practical systems is also explained This book brings together essential elements of building a content based multimedia database system in a way that makes them accessible to practitioners in computer science and electrical engineering It can also serve as a textbook for graduate level courses

The Turn Peter Ingwersen, Kalervo Järvelin, 2005-11-30 T The Turn analyzes the research of information seeking and retrieval IS search and works tasks and situations in context interaction between humans and machines information acquisition relevance and information use research design and methodology based on a structured set of explicit variables all set into the holistic cognitive approach The present monograph invites the reader into a construction project there is much research to do for a contextual understanding of IS R The Turn represents a wide ranging perspective of IS R by providing a novel unique research framework covering both individual and social aspects of information behavior including the generation searching retrieval and use of information Regarding traditional laboratory information retrieval research the monograph proposes the extension of research toward actors search and work tasks IR interaction and utility of information Regarding traditional information seeking research it proposes the extension toward information access technology and work task contexts The Turn is the first synthesis of research in the broad area of IS R ranging from systems oriented laboratory IR research to social science oriented information seeking studies
