Computational Intelligence for Agent-based Systems Raymond S.T. Lee, 2007-07-24 The scope of this volume is to give to the reader a wide scenario of recent works characterized by a synergistic combination of Soft Computing area with recent trends of Distributed Artificial Intelligence and Ambient Intelligence We edited this book for two basic motivations the emergence of computational intelligence as a mature and integrated science and the power of the agent paradigm in realizing complex and distributed environments Computational Intelligence has nowadays a mature formal theory and robust implementation experiences Intelligent agents have shown their inner ability in acquiring data and knowledge from and performing appropriate de sions through a functional relation

that maps percepts to actions Computational Intelligence inside Agents are extremely helpful to support the designer of agent based systems in treating with unknown or ill defined environments so to better handle knowledge representation and reasoning under these assumptions The formulation of cooperative strategies the linguistic aspects of the communication the local decision versus the global knowledge the actions and plans as distributed viewpoints could be characterized by an incomplete knowledge and by a fragmentation of logical interactions faced often by a non monotonic reasoning While building smart environments many challenges arise The system needs to interact with its users in order to obtain feedback in a non intrusive way Explicit implicit feedback is needed to take decisions in near real time ICEMBDA 2023 Jianguo Liu,Haifeng Li,Sikandar Ali Qalati,2024-01-19 The 4th International Conference on Economic Management and Big Data Applications was successfully held in Tianjin China from October 27th to 29th 2023 This conference served as a platform for researchers scholars and industry professionals to exchange knowledge and insights in the field of economic management and the application of big data The conference held great significance in advancing the understanding and application of economic management and big data By bringing together experts from around the globe the conference facilitated the exchange of innovative ideas and research findings contributing to the development of these fields The topics covered during the conference showcased the latest advancements and trends in enterprise economic statistics information evaluation blockchain technology industrial structure optimization information retrieval data regression analysis intelligent Internet of Things platforms and data encryption The discussions and presentations during the conference allowed participants to explore new methodologies strategies and technologies that can enhance economic management practices and leverage the potential of big data The conference provided a platform for scholars and practitioners to share their experiences insights and best practices fostering collaboration and networking opportunities Furthermore the proceedings were published ensuring the dissemination of valuable research findings to a wider audience The collective knowledge and research presented at the conference will contribute to the academic community industry professionals and policymakers enabling them to make informed decisions and develop effective strategies in the fields of economic management and big data applications Overall the 4th International Conference on Economic Management and Big Data Applications played a pivotal role in promoting knowledge exchange fostering innovation and shaping the future of economic management by harnessing the power of big data

Information Retrieval Technology Sung Hyon Myaeng,Ming Zhou,Kam-Fai Wong,Hong-Jiang Zhang,2007-05-25 TheAsiaInformationRetrievalSymposium AIRS was established by the Asian information retrieval community after the successful series of Information retrieval with Asian Languages IRAL workshops held in six different locations in Asia starting from 1996 While the IRAL workshops had their focus on information retrieval problems involving Asian languages AIRS covers a wider scope of applications systems technologies and theory aspects of information retrieval in text audio image video and multimedia data This extension of the scope reflects and fosters increasing research activities in information

retrieval in this region and the growing need for collaborations across subdisciplines We are very pleased to report that we saw a sharp increase in the number of submissions and their quality compared to the IRAL workshops We received 106 papers from nine countries in Asia and North America from which 28 papers 26% were presented in oral sessions and 38 papers in poster sessions 36% It was a great challenge for the Program Committee to select the best among the excellent papers The low acceptance rates witness the success of this year's conference After a long discussion between the AIRS 2004 Steering Committee and Springer the publisher agreed to publish our proceedings in the Lecture Notes in Computer Science LNCS series which is SCI indexed We feel that this strongly attests to the excellent quality of the papers
