Made to Order Margaret E. Derry,2022-03-01 Animal breeding has been complicated by persisting factors across species cultures geography and time In *Made to Order* Margaret E Derry explains these factors and other breeding concerns in relation to both animals and society in North America and Europe over the past three centuries *Made to Order* addresses how breeding methodology evolved what characterized the aims of breeding and the way structures were put in place to regulate the occupation Illustrated by case studies on important farm animals and companion species the book presents a synthetic overview of livestock breeding as a whole It gives considerable emphasis to genetics and animal breeding in the post 1960 period the relationship between environmental and improvement breeding and

regulation of breeding as seen through pedigrees In doing so *Made to Order* shows how studying the ancient human practice of animal breeding can illuminate the ways in which human thinking theorizing and evolving characterize our interactions with all natural processes *New Perspectives on the History of Life Sciences and Agriculture* Denise Phillips, Sharon Kingsland, 2015-02-12 This volume explores problems in the history of science at the intersection of life sciences and agriculture from the mid eighteenth to the mid twentieth century Taking a comparative national perspective the book examines agricultural practices in a broad sense including the practices and disciplines devoted to land management forestry soil science and the improvement and management of crops and livestock The life sciences considered include genetics microbiology ecology entomology forestry and deal with US European Russian Japanese Indonesian Chinese contexts The book shows that the investigation of the border zone of life sciences and agriculture raises many interesting questions about how science develops In particular it challenges one to re examine and take seriously the intimate connection between scientific development and the practical goals of managing and improving perhaps even recreating the living world to serve human ends Without close attention to this zone it is not possible to understand the emergence of new disciplines and transformation of old disciplines to evaluate the role and impact of such major figures of science as Humboldt and Mendel or to appreciate how much of the history of modern biology has been driven by national ambitions and imperialist expansion in competition with rival nations **Genes, Genomes and Society** R  bbe W  nschiers, 2021-11-30 With CRISPR Cas gene editing tools in hand we are currently experiencing a new dimension in genetic engineering But where should the journey lead Should we treat diseases or better repair them genetically Will the new genetic engineering combined with modern reproductive biology lead to designer babies And May we allow a liberalization of these techniques as citizen science New methods can precisely alter the genetic material and they leave no traces This gene and genome surgery thrives on increasing knowledge about the mode of action of genes those trait giving regions in the genome This knowledge is being applied in practice particularly in the breeding of more resistant and higher yielding crops And what about us The author shows that gene variants have long been associated not only with diseases but also with nutritional preferences or intelligence Therapeutic and optimization options are close at hand What effect does the environment have on the expression of genetic material Genes can be shaped during a person s lifetime by the environment nutrition or experiences and thus passed on to their offspring in a modified form So does society have a new form of long term responsibility for epi genetic integrity In this vividly and comprehensibly written book the author explains the state of genetic engineering without assuming too much prior knowledge and invites an open dialogue on this ambivalent topic Get your own idea of the fascinating yet intimidating possibilities of genetic engineering Where do you stand on the issue With the help of this book you have the chance to form a differentiated opinion This book is a translation of the original German 1st edition *Generation Gen* Schere by R  bbe W  nschiers published by Springer Fachmedien Wiesbaden GmbH part of Springer Nature in 2019 The

translation was done with the help of artificial intelligence machine translation by the service DeepL.com. The text was subsequently revised by the author. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.
