*Water Resources Engineering* G. Tayfur,2014-11-02 Engineers have attempted to solve water resources engineering problems with the help of empirical regression based and numerical models Empirical models are not universal nor are regression based models The numerical models are on the other hand physics based but require substantial data measurement and parameter estimation Hence there is a need to employ models that are robust user friendly and practical and that do not have the shortcomings of the existing methods Artificial intelligence methods meet this need Soft Computing in Water Resources Engineering introduces the basics of artificial neural networks ANN fuzzy logic FL and genetic algorithms GA It gives details on the feed forward back propagation algorithm and also introduces neuro fuzzy modelling to readers Artificial intelligence method applications covered in the book include predicting and forecasting floods predicting suspended sediment predicting event based flow hydrographs and sedimentographs locating seepage path in an earth fill dam body and the predicting dispersion coefficient in natural channels The author also provides an analysis comparing the artificial intelligence models and contemporary non artificial intelligence methods empirical numerical regression etc The ANN FL and GA are fairly new methods in water resources engineering The first publications appeared in the early 1990s and quite a few studies followed in the early 2000s Although these methods are currently widely known in journal publications they are still very new for many scientific readers and they are totally new for students especially undergraduates Numerical methods were first taught at the graduate level but are now taught at the undergraduate level There are already a few graduate courses developed on AI methods in engineering and included in the graduate curriculum of some universities It is expected that these courses too will soon be taught at the undergraduate levels Prentice Hall Algebra 1 Jan Fair,1992 *Process Algebra for Parallel and Distributed Processing* Michael Alexander,William
