Mechenov,2005-07-25 In the book there are introduced models and methods of construction of pseudo solutions for the well posed and ill posed linear functional equations circumscribing models passive active and complicated experiments Two types of the functional equations are considered systems of the linear algebraic equations and linear integral equations Methods of construction of pseudos6lutions are developed in the presence of passive right hand side errors for two types of operator errors passive measurements and active representation errors of the operator and all their combinations For the determined and stochastic models of passive experiments the method of the least distances of construction of pseudosolutions is created the maximum likelihood method of construction of pseudosolutions is applied for active experiments and then methods for combinations of models of regression of passive and of active experiments are created We have constructed regularized variants of these methods for systems of the linear algebraic equations with the degenerated matrices and for linear integral equations of the first kind In pure mathematics the solution techniques of the functional equations with exact input data more often are studied In applied mathematics problem consists in construction of pseudosolutions that is solution of the hctional equations with perturbed input data Such problem in many

cases is incomparably more complicated The book is devoted to a problem of construction of a pseudosolution the problem of a parameter estimation in the following fundamental sections of applied mathematics confluent models passive active and the every possible mixed experiments **Representations of Groups** Klaus Lux,Herbert Pahlings,2010-07-01 The representation theory of finite groups has seen rapid growth in recent years with the development of efficient algorithms and computer algebra systems This is the first book to provide an introduction to the ordinary and modular representation theory of finite groups with special emphasis on the computational aspects of the subject Evolving from courses taught at Aachen University this well paced text is ideal for graduate level study The authors provide over 200 exercises both theoretical and computational and include worked examples using the computer algebra system GAP These make the abstract theory tangible and engage students in real hands on work GAP is freely available from www gap system org and readers can download source code and solutions to selected exercises from the book s web page Analytic Number Theory W.
