Algebras for Feature-Oriented Software

Development Andreas Zelend, 2020-04-07 This book systematically presents the underlying mathematical structures and foundations of feature orientation in the fields of software development. New algebras are proposed and thorough investigations and discussions of their algebraic laws as well as insights on their practical applications are provided. Feature oriented programming and feature oriented software development have been established in computer science as a general programming paradigm that provides formalisms, methods, languages and tools for building maintainable, customizable and extensible software. Feature orientation has widespread applications ranging from network protocols and data structures to software product lines.

Information Algebras Juerg Kohlas, 2012-12-06 Information usually comes in pieces from different sources. It refers to different but related questions. Therefore, information needs to be aggregated and focused onto the relevant questions. Considering combination and focusing of information as the relevant operations leads to a generic algebraic structure for information. This book introduces and studies information from this algebraic point of view. Algebras of information provide the necessary abstract framework for generic inference procedures. They allow the application of these procedures to a large variety of different formalisms for representing information. At the same time, they permit a generic study of conditional independence, a property considered as fundamental for knowledge presentation. Information algebras provide a natural framework to define and study uncertain information. Uncertain information is represented by random variables that naturally form information algebras. This theory also relates to probabilistic assumption based reasoning in information systems and is the basis for the belief functions in the Dempster-Shafer theory of evidence.

Key Maths GCSE, 2003-04 Written to support and enhance assessment alongside the pupil texts, these resources offer a range of material for the AQA specification. They provide test questions for each chapter together with detailed mark schemes to make assessment easy. Two versions of each question are provided: one allows pupils to write their answers in the spaces provided and the other requires pupils to have separate writing paper. Questions can be grouped according to needs. Master grids are provided to cut and paste tests together in a consistent format to use the resource in any order. Chapter tests can be grouped to form a module test after chapters. End of chapter examinations can also be produced in this way.
