Algebraic Geometry Santa Cruz 1995 János Kollár, David R. Morrison, 1997 *Algebraic Geometry Santa Cruz 1995* János Kollár, David R. Morrison, 1997 Algebraic Geometry, Santa Cruz 1995 János Kollár, 1997 **Algebraic Geometry, Santa Cruz 1995** János Kollár, Robert Lazarsfeld, David R. Morrison, 1997 Fifty lectures from the July 1995 conference are collected in two volumes In discussing developments during the past decade and likely future trends the contributors focus on expository surveys of important areas rather than technical presentations of new results The first volume ISBN 0 8218 0894 X covers the geometry and topology of algebraic surfaces higher dimensional and real algebraic varieties and connections with arithmetic Part 2 0895 8 covers quantum cohomology complex and toric geometry and non Abelian Hodge theory No index Annotation copyrighted by Book News Inc Portland OR *Algebraic Geometry Santa Cruz 1995* Janos Kollar, Robert Lazarsfeld, David Morrison, 1997 Algebraic Geometry Santa Cruz 1995 János Kollár Robert Lazarsfeld David R. Morrison, Algebraic Geometry Santa Cruz 1995. Part 2 Janos Kollar, 1997 *Algebraic Geometry, Santa Cruz 1995* János Kollár, Robert Lazarsfeld, David R. Morrison, 1997 **Algebraic K-Theory** Wayne Raskind, Charles A. Weibel, 1999 This volume presents the proceedings of the Joint Summer Research Conference on Algebraic K theory held at the University of Washington in Seattle High quality surveys are written by leading experts in the field Included is an up to date account of Voevodsky's proof of the Milnor conjecture relating the Milnor K theory of fields to Galois cohomology The book is intended for graduate students and research mathematicians interested in K theory algebraic geometry and number theory **Hodge Ideals** Mircea Mustață, Mihnea Popa, 2020-02-13 The authors use methods from birational geometry to study the Hodge filtration on the localization along a hypersurface This filtration leads to a sequence of ideal sheaves called Hodge ideals the first of which is a multiplier ideal They analyze their local and global properties and use them for applications related to the singularities and Hodge theory of hypersurfaces and their complements **Moduli Spaces** Leticia Brambila, Oscar García-Prada, Peter Newstead, Richard P. Thomas, 2014-03-13 A graduate level introduction to some of the important contemporary ideas and problems in the theory of moduli spaces The Wild World of 4-Manifolds Alexandru Scorpan, 2005-05-10 What a wonderful book I strongly recommend this book to anyone especially graduate students interested in getting a sense of 4 manifolds MAA Reviews The book gives an excellent overview of 4 manifolds with many figures and historical notes Graduate students nonexperts and experts alike will enjoy browsing through it Robion C Kirby University of California Berkeley This book offers a panorama of the topology of simply connected smooth manifolds of dimension four Dimension four is unlike any other dimension it is large enough to have room for wild things to happen but small enough so that there is no room to undo the wildness For example only manifolds of dimension four can exhibit infinitely many distinct smooth structures Indeed their topology remains the least understood today To put things in context the book starts with a survey of higher dimensions and of topological 4 manifolds In the second part the main invariant of a 4

manifold the intersection form and its interaction with the topology of the manifold are investigated In the third part as an important source of examples complex surfaces are reviewed In the final fourth part of the book gauge theory is presented this differential geometric method has brought to light how unwieldy smooth 4 manifolds truly are and while bringing new insights has raised more questions than answers The structure of the book is modular organized into a main track of about two hundred pages augmented by extensive notes at the end of each chapter where many extra details proofs and developments are presented To help the reader the text is peppered with over 250 illustrations and has an extensive index

Singularity Theory Denis Cheniot, Jean-Paul Brasselet, 2007 The Singularity School and Conference took place in Luminy Marseille from January 24th to February 25th 2005 More than 180 mathematicians from over 30 countries converged to discuss recent developments in singularity theory The volume contains the elementary and advanced courses conducted by singularity specialists during the conference general lectures on singularity theory and lectures on applications of the theory to various domains The subjects range from geometry and topology of singularities through real and complex singularities to applications of singularities

A Gentle Introduction to Homological Mirror Symmetry Raf Bocklandt, 2021-08-19 Introduction to homological mirror symmetry from the point of view of representation theory suitable for graduate students

Hyperbolicity of Projective Hypersurfaces Simone Diverio, Erwan Rousseau, 2016-07-12 This book presents recent advances on Kobayashi hyperbolicity in complex geometry especially in connection with projective hypersurfaces This is a very active field not least because of the fascinating relations with complex algebraic and arithmetic geometry Foundational works of Serge Lang and Paul A Vojta among others resulted in precise conjectures regarding the interplay of these research fields e g existence of Zariski dense entire curves should correspond to the potential density of rational points Perhaps one of the conjectures which generated most activity in Kobayashi hyperbolicity theory is the one formed by Kobayashi himself in 1970 which predicts that a very general projective hypersurface of degree large enough does not contain any non constant entire curves Since the seminal work of Green and Griffiths in 1979 later refined by J P Demailly J Noguchi Y T Siu and others it became clear that a possible general strategy to attack this problem was to look at particular algebraic differential equations jet differentials that every entire curve must satisfy This has led to some several spectacular results Describing the state of the art around this conjecture is the main goal of this work

Geometric And Combinatorial Aspects Of Commutative Algebra Jurgen Herzog, Gaetana Restuccia, 2001-03-06 This work is based on the lectures presented at the International Conference of Commutative Algebra and Algebraic Geometry held in Messina Italy It discusses developments and advances in commutative algebra algebraic geometry and combinatorics highlighting the theory of projective schemes the geometry of curves determinantal and stable idea

The Legacy of Niels Henrik Abel Olav Arnfinn Laudal, Ragni Piene, 2011-06-28 This book contains a series of research papers on subjects related to the work of Niels Henrik Abel written by some of the foremost specialists in their fields Some of the authors have been specifically

invited to present papers discussing the influence of Abel in a mathematical historical context Others have submitted papers presented at the Abel Bicentennial Conference Oslo June 3 8 2002 The idea behind the book has been to produce a text covering a substantial part of the legacy of Abel as perceived at the beginning of the 21st century It is accompanied by a CD ROM with a large amount of information related to Niels Henrik Abel such as on the Abel Centennial in 1902 and the Abel Bicentennial Conference in 2002 the launching of the Abel Prize Abel monuments and stamps banknotes coins etc issued in honour of Niels Henrik Abel

Real and Complex Singularities Terence Gaffney, Maria Aparecida Soares Ruas, 2004 The Workshop on Real and Complex Singularities is held every other year at the Instituto de Ciencias Matematicas e de Computacao Sao Carlos Brazil and brings together specialists in the vanguard of singularities and its applications This volume contains articles contributed by participants of the seventh workshop

Vector Bundles and Representation Theory Steven Dale Cutkosky, 2003 This volume contains 13 papers from the conference on Hilbert Schemes Vector Bundles and Their Interplay with Representation Theory The papers are written by leading mathematicians in algebraic geometry and representation theory and present the latest developments in the field Among other contributions the volume includes several very impressive and elegant theorems in representation theory by R Friedman and J W Morgan convolution on homology groups of moduli spaces of sheaves on K3 surfaces by H Nakajima and computation of the S^1 fixed points in Quot schemes and mirror principle computations for Grassmannians by S T Yau et al The book is of interest to graduate students and researchers in algebraic geometry representation theory topology and their applications to high energy physics

Homological Mirror Symmetry Anton Kapustin, Maximilian Kreuzer, 2009 An ideal reference on the mathematical aspects of quantum field theory this volume provides a set of lectures and reviews that both introduce and representatively review the state of the art in the field from different perspectives
