Algebraic Methods for Toeplitz-like Matrices and Operators G. Heinig, Rost, 2013-11-21 *Numerical Methods for Structured Matrices and Applications* Dario Andrea Bini, Volker Mehrmann, Vadim Olshevsky, Eugene Tyrtyshnikov, Marc van Barel, 2011-02-09 This cross disciplinary volume brings together theoretical mathematicians engineers and numerical analysts and publishes surveys and research articles related to topics such as fast algorithms in which the late Georg Heinig made outstanding achievements Structured Matrix Based Methods for Approximate Polynomial GCD Paola Boito, 2012-03-13 Defining and computing a greatest common divisor of two polynomials with inexact coefficients is a classical problem in symbolic numeric computation The first part of this book reviews the main results that have been proposed so far in the literature As usual with polynomial computations the polynomial GCD problem can be expressed in matrix form the second part of the book focuses on this point of view and analyses the structure of the relevant matrices such as Toeplitz Toeplitz block and displacement structures New algorithms for the computation of approximate polynomial GCD are presented along with extensive numerical tests The use of matrix structure allows in particular to lower the asymptotic computational cost from cubic to quadratic order with respect to polynomial degree

algebra computations **Fast Reliable Algorithms for Matrices with Structure** T. Kailath, A. H. Sayed, 1999-01-01 This book is the first to pay special attention to the combined issues of speed and numerical reliability in algorithm development. These two requirements have often been regarded as competitive so much so that the design of fast and numerically reliable algorithms for large scale structured systems of linear equations in many cases remains a significant open issue. *Fast Reliable Algorithms for Matrices with Structure* helps bridge this gap by providing the reader with recent contributions written by leading experts in the field. The authors deal with both the theory and the practice of fast numerical algorithms for large scale structured linear systems. Each chapter covers in detail different aspects of the most recent trends in the theory of fast algorithms with emphasis on implementation and application issues. Both direct and iterative methods are covered. This book is not merely a collection of articles. The editors have gone to considerable lengths to blend the individual papers into a consistent presentation. Each chapter exposes the reader to some of the most recent research while providing enough background material to put the work into proper context.

Fast Algorithms for Structured Matrices Vadim Olshevsky, 2003 One of the best known fast computational algorithms is the fast Fourier transform method. Its efficiency is based mainly on the special structure of the discrete Fourier transform matrix. Recently many other algorithms of this type were discovered and the theory of structured matrices emerged. This volume contains 22 survey and research papers devoted to a variety of theoretical and practical aspects of the design of fast algorithms for structured matrices and related issues. Included are several papers containing various affirmative and negative results in this direction. The theory of rational interpolation is one of the excellent sources providing intuition and methods to design fast algorithms. The volume contains several computational and theoretical papers on the topic. There are several papers on new applications of structured matrices e.g. to the design of fast decoding algorithms, computing state space realizations, relations to Lie algebras, unconstrained optimization, solving matrix equations etc. The book is suitable for mathematicians, engineers, and numerical analysts who design, study, and use fast computational algorithms based on the theory of structured matrices.

Large Truncated Toeplitz Matrices, Toeplitz Operators, and Related Topics Dario A. Bini, Torsten Ehrhardt, Alexei Yu. Karlovich, Ilya Spitkovsky, 2017-03-21 This book presents a collection of expository and research papers on various topics in matrix and operator theory contributed by several experts on the occasion of Albrecht Böttcher's 60th birthday. Albrecht Böttcher himself has made substantial contributions to the subject in the past. The book also includes a biographical essay, a complete bibliography of Albrecht Böttcher's work, and brief informal notes on personal encounters with him. The book is of interest to graduate and advanced undergraduate students majoring in mathematics, researchers in matrix and operator theory, as well as engineers and applied mathematicians.

Current Trends in Operator Theory and its Applications Joseph A. Ball, J. William Helton, Martin Klaus, Leiba Rodman, 2012-12-06 Many developments on the cutting edge of research in operator theory and its applications are reflected in this collection of original and review articles. Particular emphasis lies on

highlighting the interplay between operator theory and applications from other areas such as multi dimensional systems and function theory of several complex variables distributed parameter systems and control theory mathematical physics wavelets and numerical analysis

Well-Posedness of Parabolic Difference Equations A. Ashyralyev, P.E. Sobolevskii, 2012-12-06 A well known and widely applied method of approximating the solutions of problems in mathematical physics is the method of difference schemes Modern computers allow the implementation of highly accurate ones hence their construction and investigation for various boundary value problems in mathematical physics is generating much current interest The present monograph is devoted to the construction of highly accurate difference schemes for parabolic boundary value problems based on Padé approximations The investigation is based on a new notion of positivity of difference operators in Banach spaces which allows one to deal with difference schemes of arbitrary order of accuracy Establishing coercivity inequalities allows one to obtain sharp two sided estimates of convergence rates The proofs are based on results in interpolation theory of linear operators This monograph will be of value to professional mathematicians as well as advanced students interested in the fields of functional analysis and partial differential equations

Kaashoek, 2008-09-25 Mathematicians do not work in isolation They stand in a long and time honored tradition They write papers and sometimes books they read the publications of fellow workers in the field and they meet other mathematicians at conferences all over the world In this way in contact with colleagues far away and nearby from the past via their writings and from the present scientific results are obtained which are recognized as valid And that remarkably enough regardless of ethnic background political inclination or religion In this process some distinguished individuals play a special and striking role They assume a position of leadership They guide the people working with them through uncharted territory thereby making a lasting imprint on the field So things which can only be accomplished through a combination of rare talents usually broad knowledge unfailing intuition and a certain kind of charisma that binds people together All of this is present in Israel Gohberg the man to whom this book is dedicated on the occasion of his 80th birthday This comes to the foreground unmistakably from the contributions from those who worked with him or whose life was affected by him Gohberg's exceptional qualities are also apparent from the articles written by himself sometimes jointly with others that are reproduced in this book Among these are stories of his life some dealing with mathematical aspects others of a more general nature Also included are reminiscences paying tribute to a close colleague who is not among us anymore speeches or reviews highlighting the work and personality of a friend or esteemed colleague and responses to the laudations connected with the several honorary degrees that were bestowed upon him

The Gohberg Anniversary Collection Seymour Goldberg, Marinus A. Kaashoek, Peter Lancaster, 1989-07-01 R S PHILLIPS I am very gratified to have been asked to give this introductory talk for our honoured guest Israel Gohberg I should like to begin by spending a few minutes talking shop One of the great tragedies of being a mathematician is that your papers are read so seldom On the average ten people will read the introduction to a paper and perhaps two of these will actually study the paper It's difficult to know how to deal with this problem One strategy which will at least get you one more reader is to collaborate with someone I think Israel early on caught on to this and I imagine that by this time most of the analysts in the world have collaborated with him He continues relentlessly in this pursuit he visits his neighbour Harry Dym at the Weizmann Institute regularly he spends several months a year in Amsterdam working with Rien Kaashoek several weeks in Maryland with Seymour Goldberg a couple of weeks here in Calgary with Peter Lancaster and on the rare occasions when he is in Tel Aviv he takes care of his many students **The Theory of Matrices** Peter Lancaster, Miron

Floquet Theory for Partial Differential Equations P.A. Kuchment, 1993-07-01 Linear differential equations with periodic coefficients constitute a well developed part of the theory of ordinary differential equations 17 94 156 177 178 272 389 They arise in many physical and technical applications 177 178 272 A new wave of interest in this subject has been stimulated during the last two decades by the development of the inverse scattering method for integration of nonlinear differential equations This has led to significant progress in this traditional area 27 71 72 111 119 250 276 277 284 286 287 312 313 337 349 354 392 393 403 404 At the same time many theoretical and applied problems lead to periodic partial differential equations We can mention for instance quantum mechanics 14 18 40 54 60 91 92 107 123 157 160 192 193 204 315 367 412 414 415 417 hydrodynamics 179 180 elasticity theory 395 the theory of guided waves 87 89 208 300 homogenization theory 29 41 348 direct and inverse scattering 175 206 216 314 388 406 408 parametric resonance theory 122 178 and spectral theory and spectral geometry 103 105 381 382 389 There is a significant distinction between the cases of ordinary and partial differential periodic equations The main tool of the theory of periodic ordinary differential equations is the so called Floquet theory 17 94 120 156 177 267 272 389 Its central result is the following theorem sometimes called Floquet Lyapunov theorem 120 267
