engineering and information technology *Artificial Intelligence in Animal Behaviour, Veterinary Behaviour and Neurology*
 Holger Andreas Volk, Jasmin Nicole Nessler, Anna Zamansky, Sebastian Meller, Annika Bremhorst, 2025-08-18 The new leap
 innovation Artificial Intelligence AI will significantly accelerate the speed of science and translate into clinical practice faster
 than clinicians ever have been used to Machine and deep learning techniques are now readily available to analyze large and
 complex data sets providing veterinary scientists with a tool to not only better understand complex behaviour traits and
 neurological conditions but also to delve into the nuances of animal behaviour itself AI can now write plausible sounding text
 recognize written or spoken human words recognize objects in images or analyze large amounts of data Different fields of
 applications are known so far such as improving and speeding up interpretation of radiologic findings interpretation of
 electroencephalography diagnosis of autism in children objectifying ataxia in dogs detecting pain in cats and assessing and
 characterizing animal behaviours across species At the time of writing more than 500 AI based algorithms have been
 approved by the FDA for human medicine most of which are used in radiology and neurology In veterinary neurology and
 animal behavioural science only a limited amount of research on AI has been done so far Most algorithms presented are
 merely fragments of usable programs and are not suitable for clinical application Therefore ready to use applications are rare
 yet essential for implementing AI into everyday routine diagnostic work ups scientific research and animal behavioural
 assessments The research topic will help to unite current efforts and provide a collection of articles to address some of the
 current scientific and behavioural gaps In the future a clinician might have a clinical decision support tool that generates
 accurate estimations of likely outcomes of neurological disease and animal behaviour combining anamnestic behavioural
 clinical pathology and imaging information We are interested in original research systematic reviews and opinion
 papers not only about the scope and potential of AI for Veterinary Behavior and Neurology but also about the intersection of
 AI with the study of animal behaviour ethical considerations and pitfalls that the development of AI generated tools could
 present Potential themes therefore include but are not limited to AI to recognize monitor diagnose or characterise behaviour
 neurological deficits or conditions including a detailed analysis of animal behaviour across a variety of contexts and species
 AI to assess behavioural states in both clinical and natural environments AI to interpret scientific clinical data sets such as
 clinical pathology omics imaging EEG data and behaviour metrics Ethical and legal considerations when applying or using AI
 tools in the study of animal behaviour and veterinary medicine Potential of AI to enhance clinical practice in veterinary
 behavioural medicine veterinary neurology and animal behaviour research Potential of AI enhanced diagnostic and
 behavioural assessment tools with animals *Environmental Health Perspectives* ,2003-07 *Scalable Pattern Recognition*

Features integrates different soft computing and machine learning methodologies with pattern recognition tasks discusses in detail the integration of different techniques for handling uncertainties in decision making and efficiently mining large biological datasets presents a particular emphasis on real life applications such as microarray expression datasets and magnetic resonance images includes numerous examples and experimental results to support the theoretical concepts described concludes each chapter with directions for future research and a comprehensive bibliography

Health Informatics Data Analysis Dong Xu, May D. Wang, Fengfeng Zhou, Yunpeng Cai, 2017-09-08 This book provides a comprehensive overview of different biomedical data types including both clinical and genomic data. Thorough explanations enable readers to explore key topics ranging from electrocardiograms to Big Data health mining and EEG analysis techniques. Each chapter offers a summary of the field and a sample analysis. Also covered are telehealth infrastructure, healthcare information association rules, methods for mass spectrometry imaging, environmental biodiversity, and the global nonlinear fitness function for protein structures. Diseases are addressed in chapters on functional annotation of lncRNAs in human disease, metabolomics, characterization of human diseases, disease risk factors using SNP data and Bayesian methods, and imaging informatics for diagnostic imaging marker selection. With the exploding accumulation of Electronic Health Records (EHRs), there is an urgent need for computer aided analysis of heterogeneous biomedical datasets. Biomedical data is notorious for its diversified scales, dimensions, and volumes and requires interdisciplinary technologies for visual illustration and digital characterization. Various computer programs and servers have been developed for these purposes by both theoreticians and engineers. This book is an essential reference for investigating the tools available for analyzing heterogeneous biomedical data. It is designed for professionals, researchers, and practitioners in biomedical engineering, diagnostics, medical electronics, and related industries.
