**Molecular Breeding for Sustainable Crop Improvement** Vijay Rani Rajpal, S. Rama Rao, S.N. Raina, 2016-02-02 The world population is estimated to reach to more than 10 billion by the year 2050 These projections pose a challenging situation for the agricultural scientists to increase crops productivity to meet the growing food demands The unavailability and or inaccessibility to appropriate gene pools with desired traits required to carry out genetic improvement of various crop species make this task formidable for the plant breeders Incidentally most of the desired genes reside in the wild genetic relatives of the crop species Therefore exploration and characterization of wild genetic resources of important crop species is vital for the efficient utilization of these gene pools for sustainable genetic improvements to assure food security Further understanding the myriad

complexities of genic and genomic interactions among species more particularly of wild relatives of crop species and or phylogenetically distant germplasm can provide the necessary inputs to increase the effectiveness of genetic improvement through traditional and or genetic engineering methods This book provides comprehensive and latest insights on the evolutionary genesis of diversity access and its utilization in the evolution of various crop species A comprehensive account of various crops origin exploitation of the primary secondary and tertiary gene pools through breeding biosystematical cytogenetical and molecular phylogenetical relationships and genetic enhancement through biotechnological interventions among others have been provided as the necessary underpinnings to consolidate information on the effective and sustainable utilization of the related genetic resources The book stresses upon the importance of wild germplasm exploration characterization and exploitation in the assimilation of important crop species The book is especially intended for students and scientists working on the genetic improvement of crop species Plant Breeders Geneticists Taxonomists Molecular Biologists and Plant Biotechnologists working on crop species are going to find this book very useful *Lighthouse* Daniel Stallings,2011-03-01 Every yin needs its yang Opposites attract This volume provides the perfect bright counterpoint for Daniel Stallings debut collection THAT MONSTER Focused on the lighter side of human nature and the positives of life this collection offers brief vivid glimpses into the special moments of life like a boy waiting for his father to arrive or watching a beloved family cat sit patiently on the doorstep But this is not just any collection of memories It is a work of sincere human love Through verse dialogue and essays Stallings exhibits his flair for expression and imagery while establishing himself as a keen observer of the human condition Donna McCrohan Rosenthal of Ridge Writers on Books *The Ultimate Drink Directory* Dennis Wildberger,2019-04-15 NEW REDESIGNED FOR 2019 This is the only drink book that you will ever need Inside it s pages are 10 000 NEW and CLASSIC Recipes for Cocktails Shooters Martinis Frozen Drinks Mixers Hi Balls and Hot Drinks Every recipe includes specific ingredients measurements and instructions in Easy To Read Form Written and compiled by Dennis A Wildberger a master bartender with more than 25 years in the restaurant and nightclub business In addition to this remarkable collection of recipes sections include maintaining bar equipment proper glassware basic bar ingredients Building the Perfect Cocktail and so much more The Ultimate Drink Directory will replace every other bartender guide currently on your bookshelf **Here Be Dragons** David W. Koerner,Simon LeVay,2001-11-15 The discovery of life on other planets would be perhaps the most momentous revelation in human history more disorienting and more profound than either the Copernican or Darwinian revolutions which knocked the earth from the center of the universe and humankind from its position of lofty self regard In *Here Be Dragons* astronomer David Koerner and neurobiologist Simon LeVay offer a scientifically compelling and colorful account of the search for life beyond Earth The authors survey the work of biologists cosmologists computer theorists NASA engineers SETI researchers roboticists and UFO enthusiasts and debunkers as they attempt to answer the greatest remaining question facing humankind Are we alone From their safe haven of skepticism the

authors venture into the rough seas of speculation where theory and evidence run the gamut from hard science to hocus pocus Arguing that the universe is spectacularly suited for the evolution of living creatures Koerner and LeVay give us ringside seats at the great debates of Big Science The contentious arguments about what really happens in evolution the acrimonious UFO controversy and the debate over intelligence versus artificial intelligence shed new light on the wildly divergent claims about the universe and life's place in it The authors argue that while no direct evidence of extraterrestrial life yet exists habitats and chemical building blocks for life abound in the universe A wealth of new astronomical techniques and space missions may provide this evidence early in the next century Lucidly written and scientifically rigorous Here Be Dragons presents everything we know thus far about the emergence of intelligent life here on earth and perhaps beyond

Bedo, L. Láng, 2013-06-29 Wheat breeders have achieved significant results over the last fifty years in research on mankind s one of the most important crops Classical genetic and breeding methods far broader international cooperation than was experienced in earlier periods and improvements in agronomic techniques have led to previously unimaginable development in the utilisation of wheat for human consumption The contribution of wheat researchers is particularly noteworthy since these results have been achieved at a time when the world population has grown extremely dynamically Despite this demographic explosion of a proportion never previously experienced thousands of millions of people have been saved from starvation thus avoiding unpredictable social consequences and situations irreconcilable with human dignity Despite these developments in many regions of the world food supplies are still uncertain and the increase in the world s wheat production has not kept pace with the population increase during the last decade Due to the evils of civilisation and the pollution of the environment there is a constant decline in the per capita area of land suitable for agricultural production Based on population estimates for 2030 the present wheat yield of around 600 million tonnes will have to be increased to almost 1000 million tonnes if food supplies are to be maintained at the present level **Cumulated Index Medicus** , 1972
