Transport Processes in Eukaryotic and Prokaryotic Organisms W.N. Konings, H.R. Kaback, J.S. Lolkema, 1996-09-11 In recent years it has become evident that transport processes across membranes play a crucial role in many metabolic systems The activities of these transport processes often determine the physiology of the organisms This book presents a state of the art review on the analysis of a wide variety of transport systems from bacteria and eukaryotic cells A selection has been made of those systems that have been studied at the molecular level with special emphasis paid to the energetic and other biophysical properties The different classes of transport systems are presented in the following primary transport secondary transport phosphotransferase systems channels and porins and macromolecular transport Within each class of transporters several systems are presented by the leading experts in the field which has resulted in a very broad overview of transport processes in biological cells In this way the differences in the mechanisms used for translocation become evident while on the other hand features common to the different transport systems are revealed

therefore appropriate to devote a meeting to the topic The first such meeting was organized by the late Ron Duckworth and held in 1974 at the University of Strathclyde in Scotland As a result of this first meeting the organization known as International Symposium on the Properties of Water ISOPOW was born and since that first ISOPOW meeting there have been five international meetings At each meeting participants from academia and from industry have shared state of the science information pertinent to the role of water in foods Each meeting has served as a review of the current state of knowledge ISOPOW 6 is the first of these meetings where Ron Duckworth's presence has not been felt though he clearly attended the meeting in spirit A lively group of academics and industrial scientists assembled in Santa Rosa California to discuss the current state of the science As meeting chairperson I must acknowledge the tremendous contributions made by the organizing committee by the session chairpersons and by the central committee Without all their help nothing could have been achieved Most important to the success of the meeting however was the very active participation of all attendees In all seven sessions the papers were excellent and their discussion was very spirited

**Food Preservatives** Nicholas J. Russell, Graeme W. Gould, 2012-12-06 For centuries man has treated food to prolong its edible life and nowadays both traditional and modern preservatives are used widely to ensure the satisfactory maintenance of quality and safety of foods There continues to be increased public concern about the use of food additives including preservatives resulting from a perception that some of them may have deleterious effects on health However as eating habits have changed with an emphasis on what has been popularly termed a healthy diet there is at the same time a concern that reduction in preservative usage could lead to loss of safety and protection from food poisoning While some preservatives are coming under increasing regulatory pressure others particularly more natural ones are receiving increased attention and gaining in importance and acceptability This book supports the continued safe and

effective use of preservatives within these current constraints It therefore gives detailed information on the practical use of the major antimicrobial preservatives Uniquely it couples this with current understanding of their modes of action at the levels of cellular physiology and biochemistry in such a way as to provide a sound scientific basis for their efficacy Such an approach also encourages the future logical development and use of preservatives

### **The Rumen Microbial Ecosystem**

P.N. Hobson,C.S. Stewart,2012-12-06 The Preface to the first edition of this book explained the reasons for the publication of a comprehensive text on the rumen and rumen microbes in 1988 The microbes of the ruminant s forestomach and those in related organs in other animals and birds provide the means by which herbivorous animals can digest and obtain nutriment from vegetation In turn humans have relied and still do rely on herbivores for much of their food clothing and motive power Herbivores also form the food of carnivorous animals and birds in the wild The importance of the rumen microorganisms is thus apparent But while a knowledge of rumen organisms is not strictly necessary for the normal practical feeding of farm animals in recent years there has been much more emphasis on increasing the productivity of domesticated animals and in rearing farm animals on unusual feedstuffs Here a knowledge of the reactions of the rumen flora and the limits to these reactions can be invaluable In addition anaerobic rumen type microorganisms are found in the intestines of omnivores including humans and can be implicated in diseases of humans and animals They are also found in soils and natural waters where they play a part in causing pollution and also in reducing it while the same organisms confined in artificial systems are essential for the purification of sewage and other polluting and toxic wastes

*Bacterial Responses to pH* Derek J. Chadwick, Gail Cardew, 2008-04-30 Microbial responses to acidic and alkaline pH are important in many areas of bacteriology For example the mechanisms of resistance to acidic pH are important in the understanding of the passage of human pathogens through the acid of the stomach and an understanding of microbial degradation of alkaline industrial waste is important for the environment Bringing together contributions from an international and interdisciplinary group of experts working on the many aspects of bacterial cellular responses to pH this stimulating volume draws together new and innovative work in this area It delineates both similarities and differences between mechanisms of tolerance and response providing readers with an invaluable resource on the subject

**Molecular Mechanisms of Transport** Ernesto Quagliariello, Ferdinando Palmieri, 1992 The Proceedings of the 22nd Symposium of the Bari Meetings provides a comprehensive and timely record of the biochemical aspects of biomembrane transport The vast field of biomembrane transport has made great strides towards the understanding of its mechanisms by the molecular approach This book collects papers by young members of the biochemical community concentrating on this specific aspect of biomembrane transport and comprising the most recent results in the area More transport systems are being defined in terms of their catalysts pumping systems and carriers Further the description of transport has advanced to describe its regulation control and mechanisms by which energy drives transport Transport systems in a variety of membranes such as cell membranes mitochondria and bacteria are discussed Thus this volume describes major achievements and new openings of interest to scientists from a variety of fields involving biological transport
