Large-Scale Studies in Mathematics Education James A. Middleton, Jinfa Cai, Stephen Hwang, 2015-05-05 In recent years funding agencies like the Institute of Educational Sciences and the National Science Foundation have increasingly emphasized large scale studies with experimental and quasi experimental designs looking for objective truths Educational researchers have recently begun to use large scale studies to understand what really works from developing interventions to validation studies of the intervention and then to efficacy studies and the final scale up for large implementation of an intervention Moreover modeling student learning developmentally taking into account cohort factors issues of socioeconomics local political context and the presence or absence of interventions requires the use of large data sets wherein these variables can be sampled adequately and inferences made Inroads in quantitative methods have been made in the psychometric and sociometric literatures but these methods are not yet common knowledge in the mathematics education community In fact currently there is no volume devoted to discussion of issues related to large scale studies and to report findings from them This volume is unique as it directly discusses methodological issue in large scale studies and reports empirical data from large scale studies

Identity and Symbolic Interaction Richard T. Serpe, Robin Stryker, Brian Powell, 2020-04-22 This book examines identity theory s centrality within social psychology and its foundations within structural symbolic interaction highlighting its links not only to other prominent sociological subfields but also to other theoretical perspectives within and beyond sociology The book provides a synthetic overview outlining the intellectual lineage of identity theory within structural symbolic interactionism and how the Indiana School of identity theory and research associated especially with Sheldon Stryker relates to other symbolic interactionist traditions within sociology It also analyses the latest developments in response to the push to integrate identity theory which initially focused on role identities with the study of personal group and social identities Further it discusses the relationship between identity theory and affect control theory providing a sense of the many substantive topics within sociology beyond social psychology for which the study of identity has important sometimes underappreciated implications The book concludes with a chapter summarizing the interrelated lessons learned while also reflecting on remaining key questions and challenges for the future development of identity theory

The Fundamental Interaction J. Debrus, 2012-12-06 A meeting was held at the Physics Centre in Bad Honnef from Feb 16 20 1987 on the subject The Fundamental Interaction Geometrical Trends This meeting was in the series of Physics Schools organized by the German Physical Society The participants were mainly younger scientists and graduate students physicists mathematicians and astronomers from the Federal Republic of Germany there were also participants from Austria the Netherlands and Switzerland The purpose of the meeting was to introduce the participants to modern methods of mathematics and field theory which are increasingly being used in current elementary particle research An outstanding feature of the school was

the fact that each lecturer really made an effort to present his material at an introductory level which could be followed by people with the usual degree level qualifications and which nevertheless then led up to the level of contemporary specialized literature We hope that the published volume will make these lectures which taken together give a unified overview of the recent developments leading up to the current world view in modern theoretical physics available to a wider audience We wish to thank the lecturers who besides the formal lectures devoted their time to discussions with the participants throughout the duration of the School We are also grateful to the staff of the Physics Centre for their organizational assistance and to the participants whose active interest made the meeting a success The entire manuscript was efficiently typed by Manfred Krafczyk at the University of Dortmund

Early Warning Systems and Targeted Interventions for Student Success in

Online Courses Glick, Danny, Cohen, Anat, Chang, Chi, 2020-06-26 Online learning has increasingly been viewed as a possible way to remove barriers associated with traditional face to face teaching such as overcrowded classrooms and shortage of certified teachers While online learning has been recognized as a possible approach to deliver more desirable learning outcomes close to half of online students drop out as a result of student related course related and out of school related factors e g poor self regulation ineffective teacher student student student and platform student interactions low household income Many educators have expressed concern over students who unexpectedly begin to struggle and appear to fall off track without apparent reason A well implemented early warning system therefore can help educators identify students at risk of dropping out and assign and monitor interventions to keep them on track for graduation Despite the popularity of early warning systems research on their design and implementation is sparse Early Warning Systems and Targeted Interventions for Student Success in Online Courses is a cutting edge research publication that examines current theoretical frameworks research projects and empirical studies related to the design implementation and evaluation of early warning systems and targeted interventions and discusses their implications for policy and practice Moreover this book will review common challenges of early warning systems and dashboard design and will explore design principles and data visualization tools to make data more understandable and therefore more actionable Highlighting a range of topics such as curriculum design game based learning and learning support it is ideal for academicians policymakers administrators researchers education professionals instructional designers data analysts and students

Geometry Of Time-spaces: Non-commutative Algebraic Geometry, Applied To Quantum Theory Olav Arnfinn Laudal, 2011-03-21 This is a monograph about non commutative algebraic geometry and its application to physics The main mathematical inputs are the non commutative deformation theory moduli theory of representations of associative algebras a new non commutative theory of phase spaces and its canonical Dirac derivation The book starts with a new definition of time relative to which the set of mathematical velocities form a compact set implying special and general relativity With this model in mind a general Quantum Theory is developed and shown to fit with the classical theory In particular the toy model used as example contains as part of the structure the classical gauge groups $u(1)$, $su(2)$ and $su(3)$ and therefore also the theory of spin and quarks etc

Topology and Quantum Theory in Interaction David Ayala, Daniel S. Freed, Ryan E. Grady, 2018-10-25 This volume contains the proceedings of the NSF CBMS Regional Conference on Topological and Geometric Methods in QFT held from July 31 August 4 2017 at Montana State University in Bozeman Montana In recent decades there has been a movement to axiomatize quantum field theory into a mathematical structure In a different direction one can ask to test these axiom systems against physics Can they be used to rederive known facts about quantum theories or better yet be the framework in which to solve open problems Recently Freed and Hopkins have provided a solution to a classification problem in condensed matter theory which is ultimately based on the field theory axioms of Graeme Segal Papers contained in this volume amplify various aspects of the Freed Hopkins program develop some category theory which lies behind the cobordism hypothesis the major structure theorem for topological field theories and relate to Costello's approach to perturbative quantum field theory Two papers on the latter use this framework to recover fundamental results about some physical theories two dimensional sigma models and the bosonic string Perhaps it is surprising that such sparse axiom systems encode enough structure to prove important results in physics These successes can be taken as encouragement that the axiom systems are at least on the right track toward articulating what a quantum field theory is
