Bloch,Charles Herbert Clemens,American Mathematical Society,1987-12-31 Each volume in this series includes papers many of a survey expository nature on a specific active area of mathematics These papers were presented at symposia summer research institutes and summer research conferences sponsored by the American Mathematical Society and other organizations   *Algebraic Geometry Santa Cruz 1995* János Kollár,David R. Morrison,1997   **Affine Algebraic Geometry - Proceedings Of The Conference** Kayo Masuda,Hideo Kojima,Takashi Kishimoto,2013-05-20 The present volume grew out of an international conference on affine algebraic geometry held in Osaka Japan during 3 6 March 2011 and is dedicated to Professor Masayoshi Miyanishi on the occasion of his 70th birthday It contains 16 refereed articles in the areas of affine algebraic geometry commutative algebra and related fields which have been the working fields of Professor Miyanishi for almost 50 years Readers will be able to find recent trends in these areas too The topics contain both algebraic and analytic as well as both affine and projective problems All the results treated in this volume are new and original which subsequently will provide fresh research problems to explore This volume is suitable for graduate students and researchers in these areas   **Contemporary Trends in Algebraic Geometry and Algebraic Topology** Shiing-Shen Chern,2002 The Wei Liang Chow and Kuo Tsai Chen Memorial Conference was proposed and held by Prof S S Chern in Nankai Institute of Mathematics It was devoted to memorializing those two outstanding and original Chinese mathematicians who had made significant contributions to algebraic geometry and algebraic topology respectively It also provided a forum for leading mathematicians to expound and discuss their views on new ideas in these fields as well as trends in 21st Century mathematics About 100 mathematicians participated in the conference including Sir Michael Atiyah Jacob Palis Phillip Griffiths David Eisenbud Philippe Tondeur Yujiro Kawamata Tian Gang etc This invaluable volume contains the selected papers presented at the conference The topics include canonical maps of Gorenstein 3 folds fundamental groups of algebraic curves Chen s interated integrals algebraic fiber spaces and others   **Hilbert Schemes of Points and Infinite Dimensional Lie Algebras** Zhenbo Qin,2018-02-26 Hilbert schemes which parametrize subschemes in algebraic varieties have been extensively studied in algebraic geometry for the last 50 years The most interesting class of Hilbert schemes are schemes of collections of points zero dimensional subschemes in a smooth algebraic surface Schemes turn out to be closely related to many areas of mathematics such as algebraic combinatorics integrable systems representation theory and

mathematical physics among others This book surveys recent developments of the theory of Hilbert schemes of points on complex surfaces and its interplay with infinite dimensional Lie algebras It starts with the basics of Hilbert schemes of points and presents in detail an example of Hilbert schemes of points on the projective plane Then the author turns to the study of cohomology of including the construction of the action of infinite dimensional Lie algebras on this cohomology the ring structure of cohomology equivariant cohomology of and the Gromov Witten correspondence The last part of the book presents results about quantum cohomology of and related questions The book is of interest to graduate students and researchers in algebraic geometry representation theory combinatorics topology number theory and theoretical physics

Determinantal Ideals of Square Linear Matrices Zaqueu Ramos,Aron Simis,2024-06-03 This book explores determinantal ideals of square matrices from the perspective of commutative algebra with a particular emphasis on linear matrices Its content has been extensively tested in several lectures given on various occasions typically to audiences composed of commutative algebraists algebraic geometers and singularity theorists Traditionally texts on this topic showcase determinantal rings as the main actors emphasizing their properties as algebras This book follows a different path exploring the role of the ideal theory of minors in various situations highlighting the use of Fitting ideals for example Topics include an introduction to the subject explaining matrices and their ideals of minors as well as classical and recent bounds for codimension This is followed by examples of algebraic varieties defined by such ideals The book also explores properties of matrices that impact their ideals of minors such as the 1 generic property explicitly presenting a criterion by Eisenbud Additionally the authors address the problem of the degeneration of generic matrices and their ideals of minors along with applications to the dual varieties of some of the ideals Primarily intended for graduate students and scholars in the areas of commutative algebra algebraic geometry and singularity theory the book can also be used in advanced seminars and as a source of aid It is suitable for beginner graduate students who have completed a first course in commutative algebra

Topological Methods in Algebraic Transformation Groups Kraft,2012-12-06 In recent years there has been increasing interest and activity in the area of group actions on affine and projective algebraic varieties Tech niques from various branches of mathematics have been important for this study especially those coming from the well developed theory of smooth compact transformation groups It was timely to have an interdisciplinary meeting on these topics We organized the conference Topological Methods in Alg braic Transformation Groups which was held at Rutgers University 4 8 April 1988 Our aim was to facilitate an exchange of ideas and techniques among mathematicians studying compact smooth transformation groups alge braic transformation groups and related issues in algebraic and analytic geometry The meeting was well attended and these Proceedings offer a larger audience the opportunity to benefit from the excellent survey and specialized talks presented The main topics concerned various as pects of group actions algebraic quotients homogeneous spaces and their compactifications The meeting was made possible by support from Rutgers University and the National Science
