Number Theoretic And Algebraic Methods In Computer Science - Proceedings Of The International Conference Horst G Zimmer, 1995-08-31 NTAMCS 93 brought to Moscow researchers from areas of computer science and mathematics that traditionally have been apart but which use similar number theoretic and algebraic methods An incomplete list of such areas includes cryptography coding theory computational algebra and number theory and numerical analysis The papers in this volume emphasise the common principles and the essential unity of the computational and mathematical sciences

Local Search in Combinatorial Optimization Emile Aarts, Jan Karel Lenstra, 2018-06-05 In the past three decades local search has grown from a simple heuristic idea into a mature field of research in combinatorial optimization that is attracting ever increasing attention Local search is still the method of choice for NP hard problems as it provides a robust approach for obtaining high quality solutions to problems of a realistic size in reasonable time Local Search in Combinatorial Optimization covers local search and its variants from both a theoretical and practical point of view each topic discussed by a leading authority This book is an important reference and invaluable source of inspiration for students and researchers in discrete mathematics computer science operations research industrial engineering and management science In addition to the editors the contributors are Mihalis Yannakakis Craig A Tovey Jan H M Korst Peter J M van Laarhoven Alain Hertz Eric Taillard Dominique de Werra Heinz M Hlenbein Carsten Peterson Bo S derberg David S Johnson Lyle A McGeoch Michel Gendreau Gilbert Laporte Jean Yves Potvin Gerard A P Kindervater Martin W P Savelsbergh Edward J Anderson Celia A Glass Chris N Potts C L Liu Peichen Pan Iiro Honkala and Patric R J sterg rd

Error-Correction Coding and Decoding Martin Tomlinson,Cen Jung Tjhai,Marcel A. Ambroze,Mohammed Ahmed,Mubarak Jibril,2017-02-21 This book discusses both the theory and practical applications of self correcting data commonly known as error correcting codes The applications included demonstrate the importance of these codes in a wide range of everyday technologies from smartphones to secure communications and transactions Written in a readily understandable style the book presents the authors twenty five years of research organized into five parts Part I is concerned with the theoretical performance attainable by using error correcting codes to achieve communications efficiency in digital communications systems Part II explores the construction of error correcting codes and explains the different families of codes and how they are designed Techniques are described for producing the very best codes Part III addresses the analysis of low density parity check LDPC codes primarily to calculate their stopping sets and low weight codeword spectrum which determines the performance of th ese codes Part IV deals with decoders designed to realize optimum performance Part V describes applications which include combined error correction and detection public key cryptography using Goppa codes correcting errors in passwords and watermarking This book is a valuable resource for anyone interested in error correcting codes and their applications ranging from non experts to professionals at the forefront of research in their field This book is open access under a CC BY 4 0 license

Algebraic and Logic Programming Helene Kirchner,Giorgio Levi,1992-08-19 This volume contains the proceedings of the Third International Conference on Algebraic and Logic Programming held in Pisa Italy September 2 4 1992 Like the two previous conferences in Germany in 1988 and France in 1990 the third conference aims at strengthening the connections betweenalgebraic techniques and logic programming On the one hand logic programming has been very successful during the last decades and more and more systems compete in enhancing its expressive power On the other hand concepts like functions equality theory and modularity are particularly well handled in an algebraic framework Common foundations of both approaches have recently been developed and this conference is a forum for people from both areas to exchange ideas results and experiences The book covers the following topics semantics ofalgebraic and logic programming integration of functional and logic programming term rewriting narrowing and resolution constraintlogic programming and theorem proving concurrent features in algebraic and logic programming languages and implementation issues

Combinatorial and Additive Number Theory II Melvyn B.
