Algebraic Extremal And Metric Combinatorics 1986:

Algebraic, Extremal and Metric Combinatorics 1986 M. Deza, Peter Frankl, I. G. Rosenberg, 1988-08-25 This book represents a comprehensive overview of the present state of progress in three related areas of combinatorics It comprises selected papers from a conference held at the University of Montreal Topics covered in the articles include association schemes extremal problems combinatorial geometrics and matroids and designs All the papers contain new results and many are extensive surveys of particular areas of research Particularly valuable will be Ivanov's paper on recent Soviet research in these areas Consequently this volume will be of great attraction to all researchers in combinatorics and to research students requiring a rapid introduction to some of the open problems in the subject

Combinatorial Algebraic Topology Dmitry Kozlov, 2008-01-08 This volume is the first comprehensive treatment of combinatorial algebraic topology in book form The first part of the book constitutes a swift walk through the main tools of algebraic topology Readers graduate students and working mathematicians alike will probably find particularly useful the second part which contains an in depth discussion of the major research techniques of combinatorial algebraic topology Although applications are sprinkled throughout the second part they are principal focus of the third part which is entirely devoted to developing the topological structure theory for graph homomorphisms

Extremal Combinatorics Stasys Jukna, 2001-06-12 This is a concise up to date introduction to extremal combinatorics for non specialists Strong emphasis is made on theorems with particularly elegant and informative proofs which may be called the gems of the theory A wide spectrum of the most powerful combinatorial tools is presented including methods of extremal set theory the linear algebra method the probabilistic method and fragments of Ramsey theory A thorough discussion of recent applications to computer science illustrates the inherent usefulness of these methods

Investigations in Algebraic Theory of Combinatorial Objects I.A. Faradzev, A.A. Ivanov, M. Klin, A.J. Woldar, 1993-11-30 X K chendorffer L A Kalu lnin and their students in the 50s and 60s Nowadays the most deeply developed is the theory of binary invariant relations and their combinatorial approximations These combinatorial approximations arose repeatedly during this century under various names Hecke algebras centralizer rings association schemes coherent configurations cellular rings etc see the first paper of the collection for details and in various branches of mathematics both pure and applied One of these approximations the theory of cellular rings cellular algebras was developed at the end of the 60s by B Yu Weisfeiler and A A Leman in the course of the first serious attempt to study the complexity of the graph isomorphism problem one of the central problems in the modern theory of combinatorial algorithms At roughly the same time G M Adelson Velskir V L Arlazarov I A Faradteev and their colleagues had developed a rather efficient tool for the constructive enumeration of combinatorial objects based on the

branch and bound method By means of this tool a number of sports like results were obtained Some of these results are still unsurpassed

Handbook of Algebra, 1995-12-18 Handbook of Algebra defines algebra as consisting of many different ideas concepts and results Even the nonspecialist is likely to encounter most of these either somewhere in the literature disguised as a definition or a theorem or to hear about them and feel the need for more information Each chapter of the book combines some of the features of both a graduate level textbook and a research level survey This book is divided into eight sections Section 1A focuses on linear algebra and discusses such concepts as matrix functions and equations and random matrices Section 1B cover linear dependence and discusses matroids Section 1D focuses on fields Galois Theory and algebraic number theory Section 1F tackles generalizations of fields and related objects Section 2A focuses on category theory including the topos theory and categorical structures Section 2B discusses homological algebra cohomology and cohomological methods in algebra Section 3A focuses on commutative rings and algebras Finally Section 3B focuses on associative rings and algebras This book will be of interest to mathematicians logicians and computer scientists

Surveys in Combinatorics, 1989 J. Siemons, 1989-08-03 Many areas of current research activity in combinatorics and its applications including graph theory designs and probabilistic graphs are surveyed in lectures presented at the 12th British Combinatorial Conference

Geometric Combinatorics Ezra Miller, Victor Reiner, Bernd Sturmfels, Geometric combinatorics describes a wide area of mathematics that is primarily the study of geometric objects and their combinatorial structure This text is a compilation of expository articles at the interface between combinatorics and geometry

Matroid Theory J. G. Oxley, 2006 The study of matroids is a branch of discrete mathematics with basic links to graphs lattices codes transversals and projective geometries Matroids are of fundamental importance in combinatorial optimization and their applications extend into electrical engineering and statics This incisive survey of matroid theory falls into two parts the first part provides a comprehensive introduction to the basics of matroid theory while the second treats more advanced topics The book contains over five hundred exercises and includes for the first time in one place short proofs for most of the subjects major theorems The final chapter lists sixty unsolved problems and details progress towards their solutions

Nonassociative Mathematics and its Applications Petr Vojtěchovský, Murray R. Bremner, J. Scott Carter, Anthony B. Evans, John Huerta, Michael K. Kinyon, G. Eric Moorhouse, Jonathan D. H. Smith, 2019-01-14 Nonassociative mathematics is a broad research area that studies mathematical structures violating the associative law $x(yz) \neq (xy)z$ The topics covered by nonassociative mathematics include quasigroups loops Latin squares Lie algebras Jordan algebras octonions racks quandles and their applications This volume contains the proceedings of the Fourth Mile High Conference on Nonassociative Mathematics held from July 29 August 5 2017 at the University of Denver Denver Colorado Included are research papers covering active areas of investigation survey papers covering Leibniz algebras self distributive structures and rack homology and a sampling of applications ranging from Yang Mills theory to the Yang Baxter equation and Laver tables An important aspect of

nonassociative mathematics is the wide range of methods employed from purely algebraic to geometric topological and computational including automated deduction all of which play an important role in this book **Semimodular Lattices** Manfred Stern,1999-05-13 In Semimodular Lattices Manfred Stern uses successive generalizations of distributive and modular lattices to outline the development of semimodular lattices from Boolean algebras He focuses on the important theory of semimodularity its many ramifications and its applications in discrete mathematics combinatorics and algebra The book surveys and analyzes Garrett Birkhoff's concept of semimodularity and the various related concepts in lattice theory and it presents theoretical results as well as applications in discrete mathematics group theory and universal algebra Researchers in lattice theory discrete mathematics combinatorics and algebra will find this book valuable **Handbook of Combinatorics** R.L. Graham,1995-12-11 Handbook of Combinatorics **Classifying Spaces of Sporadic Groups** David J. Benson,Stephen D. Smith,2008 For each of the 26 sporadic finite simple groups the authors construct a 2 completed classifying space using a homotopy decomposition in terms of classifying spaces of suitable 2 local subgroups This construction leads to an additive decomposition of the mod 2 group cohomology **Canadian Journal of Mathematics** ,1989-12 *Handbook of Combinatorics Volume 1* Ronald L. Graham,Martin Grötschel,László Lovász,1995-12-11 Handbook of Combinatorics Volume 1 focuses on basic methods paradigms results issues and trends across the broad spectrum of combinatorics The selection first elaborates on the basic graph theory connectivity and network flows and matchings and extensions Discussions focus on stable sets and claw free graphs nonbipartite matching multicommodity flows and disjoint paths minimum cost circulations and flows special proof techniques for paths and circuits and Hamilton paths and circuits in digraphs The manuscript then examines coloring stable sets and perfect graphs and embeddings and minors The book takes a look at random graphs hypergraphs partially ordered sets and matroids Topics include geometric lattices structural properties linear extensions and correlation dimension and posets of bounded degree hypergraphs and set systems stability transversals and matchings and phase transition The manuscript also reviews the combinatorial number theory point lattices convex polytopes and related complexes and extremal problems in combinatorial geometry The selection is a valuable reference for researchers interested in combinatorics **Power Algebras over Semirings** Jonathan S. Golan,1999-07-31 This research monograph investigates sets of the form RA where R is a semiring and A is a set with a certain structure Such constructs generalise fuzzy and toll algebraic structures which in recent years have shown themselves of importance in engineering and computer science as well as in new mathematical disciplines like idempotent analysis This volume puts much of the ad hoc work of the past decade on a firm mathematical foundation by creating a unified approach which has important implications in such diverse areas as formal language theory discrete dynamical systems models of optimal control and many others This book also seeks to address the fundamental question posed by Hhle and Sostak as to what extent basic fields of mathematics like algebra and topology are dependent on the underlying set theory Since the development of a new

mathematical theory is basically inductive this book begins with a large number of instances which appear in various mathematical contexts and then develops a general abstract framework with many examples which will encourage further study in greater depth Audience This work will be of interest to mathematicians whose work involves associative rings and algebras ordered algebraic structures optimal control graph theory fuzzy sets and fuzzy algebraic structures **Handbook of Combinatorics** Ronald L.
