**Conceptual Ecology and Invasion Biology: Reciprocal Approaches to Nature** Marc W. Cadotte, Sean M. McMahon, Tadashi Fukami, 2006-07-19 The conservation threat represented by invasive species is well known but the scientific opportunities are underappreciated Invasion studies have historically been largely directed at the important job of collecting case studies Invasion biology has matured to the point of being able to incorporating itself into the heart of ecology and should be viewed as extensions or critical experiments of ecological theory In this edited volume global experts in ecology and evolutionary biology explore how theories in ecology elucidate the invasion processes while also examining how specific invasions informs ecological theory This reciprocal benefit is highlighted in a number of scales of organization population community and biogeographic while employing example invaders in all major groups of organisms and from a number of regions around the globe The chapters in this volume utilize many of the cutting edge observational experimental analytical and computational methods used in modern ecology Through merging conceptual ecology and invasion biology we can obtain a better understanding of the invasion process while also developing a better understanding of how ecological systems function

**Alien Species and Evolution** George W. Cox, 2013-04-10 In Alien Species and Evolution biologist George W Cox reviews and synthesizes emerging information on the evolutionary changes that occur in plants animals and microbial organisms when they colonize new geographical areas and on the evolutionary responses of the native species with which alien species interact The book is broad in scope exploring information across a wide variety of taxonomic groups trophic levels and geographic areas It examines theoretical topics related to rapid evolutionary change and supports the emerging concept that species introduced to new physical and biotic environments are particularly prone to rapid evolution The author draws on examples from all parts of the world and all major ecosystem types and the variety of examples used gives considerable insight into the patterns of evolution that are likely to result from the massive introduction of species to new geographic regions that is currently occurring around the globe Alien Species and Evolution is the only state of the art review and synthesis available of this critically important topic and is an essential work for anyone concerned with the new science of invasion biology or the threats posed by invasive species

**Carnivores of Australia** Alistair Glen, Christopher Dickman, 2014-11-05 The Australian continent provides a unique perspective on the evolution and ecology of carnivorous animals In earlier ages Australia provided the arena for a spectacular radiation of marsupial and reptilian predators The causes of their extinctions are still the subject of debate Since European settlement Australia has seen the extinction of one large marsupial predator the thylacine another the Tasmanian devil is in danger of imminent extinction and still others have suffered dramatic declines By contrast two recently introduced predators the fox and cat have been spectacularly successful with devastating impacts on the Australian fauna Carnivores of Australia Past

Present and Future explores Australia's unique predator communities from pre-historic, historic and current perspectives. It covers mammalian, reptilian and avian carnivores both native and introduced to Australia. It also examines the debate surrounding how best to manage predators to protect livestock and native biodiversity. Readers will benefit from the most up-to-date synthesis by leading researchers and managers in the field of carnivore biology. By emphasising Australian carnivores as exemplars of flesh eaters in other parts of the world, this book will be an important reference for researchers, wildlife managers and students worldwide.

Bioinvasions is a current top research subject for natural sciences social sciences and humanities and a major concern for conservationists land managers and planners In the last decades new findings perspectives and practices have revealed the multifaceted challenges of preventing new introductions and dealing with those invasive species that harm natural ecosystems economy and human welfare This book brings together environmental historians and natural scientists to share their studies and experiences on the human dimensions of biological invasions from the ancient past to the current challenges The collection of papers focuses on the Mediterranean region and deals with aquatic and terrestrial ecosystems on the mainland and islands ranging from marine and freshwater environments to coastal marshlands and forests A wide diversity of animals and plants are featured from marine fishes to marine and freshwater crustaceans invertebrates reptiles and amphibians birds and mammals to grasses shrubs and trees This book is a contribution to the scientific debate on how to deal with the historical dimensions of biological invasions fostering dialogue between cultural and ecological explanations of environmental change to inform environmental policy and management It has been organized in three sections the first is the editors introduction in which they review the existing literature and highlight relevant concepts and ideas the second is about alien species in the Mediterranean region the third includes cases from other Mediterranean type regions **The**

**Mathematics Behind Biological Invasions** Mark A. Lewis, Sergei V. Petrovskii, Jonathan R. Potts, 2016-05-05 This book investigates the mathematical analysis of biological invasions Unlike purely qualitative treatments of ecology it draws on mathematical theory and methods equipping the reader with sharp tools and rigorous methodology Subjects include invasion dynamics species interactions population spread long distance dispersal stochastic effects risk analysis and optimal responses to invaders While based on the theory of dynamical systems including partial differential equations and integrodifference equations the book also draws on information theory machine learning Monte Carlo methods optimal control statistics and stochastic processes Applications to real biological invasions are included throughout Ultimately the book imparts a powerful principle that by bringing ecology and mathematics together researchers can uncover new understanding of and effective response strategies to biological invasions It is suitable for graduate students and established researchers in mathematical ecology

Mathematical model for the biocontrol of vector-borne viral diseases in solanaceous vegetable plants Timothy Ado Shamaki, 2023-03-03 Doctoral Thesis Dissertation from the year 2022 in the subject Mathematics Applied Mathematics Modibbo Adama University of Technology Yola language English abstract This thesis treats the issue of Vector Borne Virus Diseases VBVDs that are transmitted in solanaceous vegetable plants by incorporating three species of vectors aphids thrips and whiteflies A mathematical model was developed that used lady beetles as biological control agents for controlling the spread of diseases in solanaceous vegetable plants through predation The research adopted the linearization method This research is restricted to a biological control of VBVDs of solanaceous vegetable plants using

compartmental modeling approach The model is a system of first order nonlinear ODEs Additionally the study is limited to three solanaceous plants i.e tomato pepper and eggplant This is because solanaceous plants are among the world's most cultivated crops and given proper conditions and regular maintenance they are relatively easy to grow We focused on viral diseases that affect solanaceous vegetable plants especially Yellow Leaf Curl Virus YLCV Spotted Wilt Virus SWV and Cucumber Mosaic Virus CMV It is a common knowledge that these plant viruses also require some sort of carrier known as vectors to transmit the pathogen from plant to plant Therefore the study is demarcated to a class of aphids green peach aphids thrips *T. tabaci* and whiteflies *Bemisia tabaci* because these ones are reported as the common problem associated with solanaceous plants which can be controlled by natural predatory enemies ladybugs *hippodamia convergens* *New Zealand Journal of Zoology*, 1986

**Hidden Pathways to Extinction** Giovanni Strona, 2022-05-17 This book provides for the first time a comprehensive overview of the fundamental roles that ecological interactions play in extinction processes bringing to light an underground of hidden pathways leading to the same dark place biodiversity loss We are in the midst of the sixth mass extinction We see species declining and vanishing one after another Poached rhinos dolphins and whales slaughtered pandas surviving only in captivity are strong emotional testimonials of what is happening Yet the main threat to natural communities may be overshadowed by the disappearance of large species with most extinctions happening unnoticed and involving less eye catching organisms such as parasites and pollinators Ecosystems hide countless invisible wires connecting organisms in dense networks of ecological interactions Through these networks perturbations can propagate from one species to another producing unpredictable effects In worst case scenarios the loss of one species might doom many others to extinction Ecologists now consider such mechanisms as a fundamental and still poorly understood driver of the ongoing biodiversity crisis Hidden Pathways to Extinction makes the invisible links connecting the fates of species and organisms evident exploring why complexity can enhance ecosystem stability and yet accelerate species loss Page after page Strona provides convincing evidence that we are primarily responsible for the fall in biodiversity that we are falling too and that we need to redouble our conservation efforts now or it won't be long before we hit the ground [Saving the Tasmanian Devil](#)

Carolyn Hogg, Samantha Fox, David Pemberton, Katherine Belov, 2019-08-01 The Tasmanian devil is threatened by Devil Facial Tumour Disease DFTD a transmissible form of cancer that has reduced the population by over 80% Persecution extreme climate events vehicle collision and habitat destruction also put pressure on this endangered species The recovery effort to save the Tasmanian devil commenced over 15 years ago as a collaborative initiative between the Tasmanian government the Australian government the Zoo and Aquarium Association Australasia and many research institutions Saving the Tasmanian Devil documents the journey taken by partner organisations in discovering what DFTD is the effect it has on wild devil populations and the outcomes achieved through research and management actions Chapters describe all aspects of devil conservation including the captive devil populations applied pathology immunology and genetic research findings adaptive

management and the importance of advocacy and partnerships This book will provide management practitioners and conservation scientists with insight into the complexities of undertaking a program of this scale and will also be of value to researchers students and others interested in conservation      **Second Chance** R Richard,2008-02-01 A 71 year old man is living out the tag end of a rotten life in poverty in a futuristic world Glarney Fered is a systems analyst and a blackbelt in the self defence art of Loro He is a very good systems analyst and can defeat men half his age in hand combat However neither skill is much use to a 71 year old man However Glarney is hired as a bodyguard for a religious figure They search the West coast city of Alvero just two old men seeking a mysterious scroll As the search goes on Glarney thinks and fights his way through a gritty inner city environment As they close in on the location of the mysterious scroll Glarney comes to realize that his client will kill Glarney once the scroll has been obtained and Glarney is no longer needed Since his client knows where he lives Glarney has no choice but to lead the religious figure to the scroll He and his client unsuccessfully try to steal the scroll from the temple where it is hidden Glarney tries to escape but is caught and has to then kill his client in a fight of legend Glarney not only kills his client in self defence in the process he eats the client s life force He then thinks to just live out his life in a little bit of comfort However Glarney finds himself growing a bit younger He then has to again fight for his life against bandits and again becomes a bit younger He realizes that he can continue to grow younger if he can just obtain more life force Glarney has his second chance      **The Ultimate Collection on UFOs** compiled from Wikipedia entries and published by by Dr Googelberg,2012-06-11 Lots of information on sightings and everything from a scientific angle about them Compiled from Wikipediapages and published by DrGoogelberg      Hunted By the Alien Vampire: An Alien Abduction Romance (The Hunt Book 4) A.
