The Association Internationale de Recherche sur la Circulation Osseuse A R C O was founded in London in December 1989 by a small group of doctors surgeons and researchers in basic sciences who had been involved for many years in the study of bone circulation and its disorders They had met several times in Toulouse during the International Symposia on Bone Circulation held there since 1973 and they wished to carry their contacts further In founding A R C O they established as their primary aims the encouragement and furtherance of research organisation of meetings and promotion of knowledge on the subject At the present time the Association has over a hundred members from more than twenty countries in Europe America and Asia All have the conviction that and its pathology can only be truly known and studied if one has an understanding of its vascular system and the way its circulation functions This concept apparently beyond question has not yet been adopted by all physicians and scientists who are interested in bone From time to time one comes across teaching programmes on bone pathology which make no mention of bone circulation

Ebert,2012-12-06 Under an association contract linking the Commission of the European Communities and the Gesellschaft für Strahlen und Umweltforschung mbH a research programme on the pathogenesis of somatic radiation damage has been under way for a number of years Experimental research on long term radiation effects following the incorporation of bone seeking radionuclides and an epidemiological study of the consequences for patients treated with 224Ra for therapeutical reasons have been among the main features of the work The research carried out on tumor induction in the low dose range and for low dose rates is particularly important as regards assessing the radiation hazard to man The second Symposium on the biological effects of 224Ra held at Neuherberg provided a welcome opportunity to take stock of what has been achieved so far and to discuss the own research efforts in an international setting The discussions focussed on two topical aspects of radiation protection One aspect was the long term effects of high LET ionizing radiations on man and the quantitative data involved in risk assessment at low doses The epidemiological studies and experimental research carried out under the association contract should provide facts and figures for an objective assessment of the radiation hazards from incorporated radio nuclides which is one of the fundamental and controversial problems of the nuclear energy debate **National Library of Medicine Current Catalog** National Library of Medicine (U.S.),1971 **A Workshop on Policy and Technical Issues Pertinent to the Development of Environmental Protection Criteria for Radioactive Wastes** ,1977 **Proceedings** ,1977 Nuclear Science Abstracts ,1973
