Soldiers, 1986 *Go, See, and Do* W. Davis Hawkins, 2019-11-06 A lifelong adventurer shares his fascinating story in this memoir of travel life in Japan and special assignments from the White House. Davis Hawkins lives a life of adventure and travel, approaching each opportunity with the mantra to Go, See, and Do. He chronicles his life through this lens, starting with his southern California upbringing before moving to Japan at an impressionable age. He experienced a changing America and East Asia landscape in the mid twentieth century, living abroad. These moments impacted his life through his military service and directed him to a successful financial and consulting career overseas. Hawkins continued traveling, embracing any opportunity to visit different cultures. He visited more than eighty countries, spanning all seven continents, finding human shrunk heads in Borneo, trekking in the Himalayas and the Amazon jungle, camping in the Gobi Desert, dining at the US State Department, courting for the President of the United States, receiving a US congressional subpoena, surviving a military coup, and much more.

Fundamentals of Cognitive Science Thomas Hardy Leahey, 2022-07-19 Fundamentals of Cognitive Science draws on research from psychology, philosophy, artificial intelligence, linguistics, evolution, and neuroscience to provide an engaging and student-friendly introduction to this interdisciplinary field. While structured around traditional cognitive psychology topics from attention, learning, theory, and memory to information processing, thinking, and decision making, the book also looks at neural networks, cognitive neuroscience, embodied cognition, and magic to illustrate cognitive science principles. The book is organized around the history of thinking about the mind and its relation to the world. It considers the evolution of cognition and how it demonstrates how our current thinking about cognitive processes is derived from pre-scientific philosophies and common sense through psychologists' empirical inquiries into mind and behavior as they pursued a science of cognition and the construction of artificial intelligences. The architectures of cognition are also applied throughout, and the book proposes a synthesis of them from traditional symbol

system architectures to recent work in embodied cognition and Bayesian predictive processing Practical and policy implications are also considered but solutions are left for the readers to determine Using extended case studies to address the most important themes ideas and findings this book is suitable for upper level undergraduate and graduate courses in psychology and related fields It is also suitable for general readers interested in an accessible treatment of cognitive science and its practical implications Please visit www.fundamentalsofcognitivescience.com for further resources to accompany the book
