Balls And Ramps:

Project Zero Frameworks for Early Childhood Education: Project Spectrum : early learning activities Howard Gardner, David Henry Feldman, Mara Krechevsky, Jie-Qi Chen, 1998-11-13 The groundbreaking work of Harvard University psychologist Howard Gardner on multiple intelligences and Tufts University psychologist David Henry Feldman on nonuniversal development is fast becoming the standard by which children's intelligence and cognitive development is understood. In this landmark three volume set Mara Krechevsky and her colleagues at Project Zero make these insights available for both teachers and scholars alike. This curriculum resource provides enriching activities in a wide variety of disciplines including mechanics and construction, movement and music.

Insights, 2003 This module builds on children's prior experiences with balls and how they move. Children focus on two themes: the properties and characteristics of balls and some of the factors that affect the way balls behave. Children begin by comparing how a wide variety of balls roll and bounce; next they construct balls out of clay and many other materials; and then they explore the movement of different balls as the balls roll down ramps through tubes and around bends. Each Teacher Guide includes specific teaching and management strategies, detailed teaching sequences for teaching the first three phases of the Learning Experience (Getting Started, Exploring and Discovering, and Processing For Meaning), reproducible masters for Student Science Notebook pages, Group Recording Sheets, and Home School Worksheets. Extension activities in science, language arts, and social studies. Assessment materials: an introductory questionnaire, embedded assessments, and a final questionnaire consisting of performance and written components. Science Background provides general science concepts as they are introduced and developed in the module to help prepare teacher. Teacher and Student Resources section: annotated lists of children's books, teacher reference books, and technological aids. research and practice in this field is growing there remains a gap in the literature about clearly explicating the use of visual data in the science classroom A growing body of literature discusses what visual data are although this topic is still viewed as being at the beginning of its development in educators thinking and there are some scattered examples of studies exploring the use of visual data in science classrooms although those studies have not necessarily clearly identified their foci as visual data per se As interest and attention has become more focused on visual data a logical progression of questioning has been how visual data are actually applied in the science classroom whether it be early elementary college or somewhere in between Visual data applications of interest to the science education community include how it is identified how it can be used with students and how students can generate it themselves how it can be employed as a diagnostic tool in concept development and how it can be utilized as an assessment tool This book explores that as well as a variety of pragmatic ways to help science educators more effectively utilize visual data and representations in their instruction
