Albian Foraminifera Of The Yukon Territory:

Albian Foraminifera of the Yukon Territory Geological Survey of Canada, T. P. CHAMNEY, 1975 *Albian Foraminifera of the Yukon Territory* T. Potter Chamney, 1978 **Benthic Foraminiferal Biostratigraphy of the South Caribbean Region** Hans M. Bolli, J. P. Beckmann, J. B. Saunders, 1994-06-16 Benthic foraminifera from the classic southern Caribbean region are presented in this book to provide valuable information on ranges for biostratigraphers working in the region and beyond Around 1000 of the more important species are assembled from the Barremian early Cretaceous to the middle Miocene approximately 120 to 10 million years before the present The deeper water benthic species are tied in to the zonal scheme used in Plankton Stratigraphy published by Cambridge University Press in 1985 The taxa have been brought up to date generically and in many cases new comparisons between species have been made the late Cretaceous and early Paleogene are particularly detailed This information together with detailed illustrations will enable the taxa to be used stratigraphically *Sedimentary Cover of the Craton in Canada* D.F. Stott, J.D. Aitken, 1993 The early chapters of the volume present data and interpretations of the geophysics of the craton and summarise with sequential maps the tectonic evolution of the craton The main body of the text and accompanying plates and figures present the stratigraphy structural history and economic geology of specific sedimentary basins and regions The volume concludes with a summary chapter in which the currently popular theories of cratonal tectonics are discussed and the unresolved questions are identified *Foraminifera* J.R. Haynes, 1981-06-18 Paper - Geological Survey of Canada , 1976 Lower Cretaceous Fort St. John Group and Upper Cretaceous Dunvegan Formation of the Foothills and Plains of Alberta, British Columbia, District of Mackenzie and Yukon Territory Donald F. Stott, 1982 The Fort St John Group one of the oldest recognized stratigraphic intervals in western Canada has gained recent importance because of its substantial coal and hydrocarbon resources Regional stratigraphic studies carried out between 1957 and 1971 form the basis for this report in which the paleogeography of a major part of the Lower Cretaceous succession of western Canada is described The results of numerous petrologic studies are presented the application of studies in clay mineralogy to the solution of stratigraphic problems is summarized and the facies variations and depositional environment of the widespread assemblage of clastic marine rocks are outlined *The Mesozoic of Middle North America* Canadian Society of Petroleum Geologists, 1984 **Bulletin - Geological Survey of Canada** Geological Survey of Canada, 1983 **Current Research in the Geological Sciences in Canada, May 1975-April 1976** , 1976 **Geological Correlation** , 1980 **IGCP Catalogue** International Geological Correlation Programme, 1978 Plutonic Rocks in Ontario G. F. D. McCrank, J. D. Misiura, P. A. Brown, 1981 Plutonic rocks of the Canadian Shield are being assessed as a potential host medium for the storage of radioactive waste A study of the geological framework of three structural provinces Superior Southern and Grenville within Ontario has resulted in an inventory of 1365 plutons which are identified on Map 1533A at a scale of 1:1 000 000 The plutons have been classified by rock type granite sensu lato comprises 75% of

Paleoecology, Biostratigraphy, Paleoceanography and Taxonomy of Agglutinated Foraminifera Christoph
Hemleben, Michael A. Kaminski, Wolfgang Kuhnt, D.B. Scott, 2012-12-06 Agglutinated foraminifera are among the most widely
distributed and abundant groups of marine meiofauna in some environments e.g. marshes deep sea. They are tolerant of
environmental extremes, tending to live where the evolutionarily more advanced calcareous foraminifera cannot survive.
However, largely because of historical reasons, the amount of scientific effort invested in this group has been small in
comparison to studies of other marine organisms. The NATO Advanced Studies Institute conference on the paleoecology
biostratigraphy paleoceanography and taxonomy of agglutinated foraminifera in Tübingen, September 17-29, 1989, was a
direct outgrowth of two previous workshops on agglutinated foraminifera held in Amsterdam in September 1981 (IWAF I) and
in Vienna in June 1986 (IWAF II). As such, the Tübingen conference constitutes the Third International Workshop on
Agglutinated Foraminifera (IWAF III) and was organized to provide a platform for synthesizing the current state of knowledge
on this group of organisms and to strengthen interactions between basic research and applied micropaleontology. One of the
main underlying themes of the conference was to identify topics in the paleoecology, biostratigraphy, paleoceanography and
taxonomy of agglutinated foraminifera which are in urgent need of further research. About 80 scientists and students from 5
continents participated in the Tübingen conference, which is one measure of the growth in interest in agglutinated
foraminifera over the past decade. During four days of technical sessions, scientific results were communicated in the form of
34 oral presentations and 15 poster displays.
