The Architects: Bernard Maybeck

Richard Reinhardt, 2018-06-20 Bernard Maybeck's name may mean little to most Americans but to Californians his creations embody the eclectic spirit of its denizens and demonstrate a unique non style produced by a self-professed non architect a man in search only of beauty Here in this short form book by Richard Reinhardt is his remarkable story

The Progressive Architecture Of Frederick G. Scheibler, Jr Martin Aurand, 1994-04-15 Frederick G Scheibler Jr 1872-1958 was the rare turn of the century American architect who looked to progressive movements such as Art Nouveau and Arts and Crafts for inspiration rather than conventional styles His fresh house designs and plans for apartment buildings and multifamily group cottages feature dramatic massing rich detailing and a wide variety of materials Scheibler envisioned each building as a work of art integrating architecture and ornamentation Prized today his best works are scattered throughout Pittsburgh's East End and eastern suburbs This richly illustrated volume the first comprehensive study of Scheibler includes 125 historic and contemporary photographs and drawings a catalogue raisonné of all of his known projects including many not recorded in any other published source a list of books in his library and a selected bibliography

American Architecture: 1860-1976 Marcus Whiffen, Frederick Koeper, 1983 The second volume of a guide comprehensive guide to American Architecture covering developments between the years 1860 and 1976

American Architects and the Mechanics of Fame Roxanne Kuter Williamson, 2014-03-07 Why does one talented individual win lasting recognition in a particular field while another equally talented person does not While there are many possible reasons one obvious answer is that something more than talent is requisite to produce fame The something more in the field of architecture asserts Roxanne Williamson is the association with a famous architect at the moment he or she first receives major publicity or designs the building for which he or she will eventually be celebrated In this study of more than six hundred American architects who have achieved a place in architectural histories Williamson finds that only a small minority do not fit the right person right time pattern She traces the apprenticeship connection in case studies of Louis Sullivan Frank Lloyd Wright Henry Hobson Richardson the firm of McKim Mead White Latrobe and his descendants the Bulfinch and Renwick Lines the European immigrant masters and Louis Kahn Although she acknowledges and discusses the importance of family connections the right schools self promotion scholarships design competition awards and promotion by important journals Williamson maintains that the apprenticeship connection is the single most important predictor of architectural fame She offers the intriguing hypothesis that what is

transferred in the relationship is not a particular style or approach but rather the courage and self confidence to be true to one's own vision Perhaps she says this is the case in all the arts American Architects and the Mechanics of Fame is sure to provoke thought and comment in architecture and other creative fields *Marble Palaces, Temples of Art* Ingrid A. Steffensen-Bruce, 1998 The era from 1890 to 1930 constituted a building boom for American art museums designed in a monumental classical style both the proliferation of the buildings and the ubiquity of the style seem to indicate an architectural as well as a sociocultural phenomenon The present work is an attempt to place the American art museum building of this period into its historical milieu and employs over one hundred illustrations and sociocultural analysis to explain the significance of both the institutions and the structures housing them to those who came into regular contact with them including architects patrons journalists and museum personnel The American Architect from the Colonial Era to the Present Cecil D. Elliott, 2002-11-27 The later Colonial era saw a need to replace the buildings hurriedly assembled by earlier colonists but competent builders were difficult to find Capable housewrights were usually well paid and many became respected and prosperous members of their communities but craft apprenticeships and a gentlemanly taste were two of the primary requirements for becoming an architect As the profession developed architects in the Northeast initiated efforts to distinguish between their work and that of housewrights and builders This work is a history of the development of architecture as a profession in the United States It is divided into four chronological sections Section One covers the beginnings in Colonial times before 1800 when there were no identifiable professionals Section Two examines architecture from 1800 to the Civil War a period during which the first architects appeared Section Three considers the profession from the time of the Civil War to World War I and the strengthening of the profession's status Section Four covers architecture since World War I up to the present Each section discusses the training of architects standards of practice general management methods information sources minority participation and other aspects of professional operation with special attention given to the relationship between the profession's development and the social history of the periods **The Architectural Detail** Edward R.
