**Understanding the Military Design Movement** Ben Zweibelson, 2023-06-09 This book explains the history and development of the military design movement featuring case studies from key modern militaries Written by a practitioner the work shows how modern militaries think and arrange actions in time and space for security affairs and why designers are disrupting challenging and reconceptualizing everything previously upheld as sacred on the battlefield It is the first book to thoroughly explain what military design is where it came from and how it works at deep

philosophically grounded levels and why it is potentially the most controversial development in generations of war fighters The work explains the tangled origins of commercial design and that of designing modern warfare the rise of various design movements and how today s military forces largely hold to a Newtonian stylization built upon mimicry of natural science infused with earlier medieval and religious inspirations Why does our species conceptualize war as such and how do military institutions erect barriers that become so powerful that efforts to design further innovation require entirely novel constructs outside the orthodoxy The book explains design stories from the Israel Defense Force the US Army the US Marine Corps the Canadian Armed Forces and the Australian Defence Force for the first time and includes the theory doctrine organizational culture and key actors involved Ultimately this book is about how small communities of practice are challenging the foundations of modern defence thinking This book will be of much interest to students of military and strategic studies defence studies and security studies as well as design educators and military professionals

Complexity Thinking: Science in the Age of Alternative Truths Cornelis Pieter Pieters,2024-04-26 Many scholars agree that we are currently living in post ideological times and that the role of religion and social ideology has become increasingly limited as a means to organise society Some even talk of a post truth era as truth itself has become suspect and public debate has become infected with terms such as fake news and alternative truths In fact in many scientific areas the notions of truth objectivity and fact are being questioned and are often even considered instruments that aim to perpetuate relationships of power of elites This book aims to take a position in these debates by looking at the often implicit associations behind truth objectivity and fact By taking a complexity informed dialectical approach a more encompassing understanding of these concepts can be developed that both respects the formidable achievements of science while being sensitive to the critique that has been raised most notably by postmodern thought

**Taking Rites Seriously** Francis Beckwith,2015-11-18 This book is a critical look at how courts legal scholars and the

academic culture mischaracterize and misunderstand religious beliefs Imrie, Emma Street, 2011-01-21 From the earliest periods of architecture and building architects actions have been conditioned by rules regulations standards and governance practices These range from socio cultural and religious codes seeking to influence the formal structure of settlement patterns to prescriptive building regulations specifying detailed elements of design in relation to the safety of building structures In Architectural Design and Regulation the authors argue that the rule and regulatory basis of architecture is part of a broader field of socio institutional and political interventions in the design and development process that serve to delimit and define the scope of the activities of architects The book explores how the practices of architects are embedded in complex systems of rules and regulations The authors develop the understanding that the rules and regulations of building form and performance ought not to be counterpoised as external to creative processes and practices but as integral to the creation of well designed places The contribution of Architectural Design and Regulation is to show that far from the rule and regulatory basis of architecture undermining the capacities of architects to design they are the basis for new and challenging activities that open up possibilities for reinventing the actions of architects
