Art-Making as Problem-Solving Melvin Chen, 2025-09-19 What is art making What is it in virtue of which an artifact counts as a work of art In this book Melvin Chen contends that art making is best understood in the context of problem solving Works of art are various ways in which artists solve problems and overcome obstacles while typically exhibiting creative thinking Using the theory of problem solving its theoretical milieu and

various philosophical tools Chen builds a robust coherent and consistent computationalist approach to art making and the production of works of art This computationalist approach to art making and the production of works of art in turn is articulated against the backdrop of an information theoretic philosophy of art This computationalist approach takes discussions in the philosophy of art into the twenty first century **Knowledge Structures** Dietrich Albert,2013-06-29 This book is a sign of its times Each one of the chapters papers written by European authors of various backgrounds illustrates a departure from the style of theorizing that has been prominent in the behavioral and social sciences for most of the century Until very recently models for behavioral phenomena were chiefly based on numerical representations of the objects of concern e g the subjects and the stimuli under study This was due in large part to the influence of nineteenth century physics which played the role of the successful older sister the one that had to be imitated if one wished to be taken seriously in scientific circles The mystical belief that there could be science only when the objects of concern were susceptible of measurement in the sense of physics was a credo that could not be violated without risks Another more honorable justification was that the numerical models were the only ones capable of feasible calculations In fact these models were typically linear An early example of such theorizing in psychology is factor analysis which attempted to represent the results of mental tests in a real vector space of small dimensionality each subject being represented by a point in that space A dimension was interpreted as a scale measuring some mental ability The analysis was simple and only required an electrical desk calculator with spinning wheels and a suitable amount of determination Problems of Engineering Psychology ,1965
