Explainable Artificial Intelligence for Intelligent Transportation Systems Amina Adadi, Afaf Bouhoute, 2023-10-20 Artificial Intelligence (AI) and Machine Learning (ML) are set to revolutionize all industries and the Intelligent Transportation Systems (ITS) field is no exception. While ML, especially deep learning models, achieve great performance in terms of accuracy, the outcomes provided are not amenable to human scrutiny and can hardly be explained. This can be very problematic, especially for systems of a safety critical nature such as transportation systems. Explainable AI (XAI) methods have been proposed to tackle this issue by producing human interpretable representations of machine learning models while maintaining performance. These methods hold the potential to increase public acceptance and trust in AI based ITS. **FEATURES:** Provides the necessary background for newcomers to the field, both academics and interested practitioners. Presents a timely snapshot of explainable and interpretable models in ITS applications. Discusses ethical, societal and legal implications of adopting XAI in the context of ITS. Identifies future research directions and open problems.

Handbook on Artificial Intelligence and Transport Hussein Dia, 2023-10-06 With AI advancements eliciting imminent changes to our transport systems, this enlightening Handbook presents essential research on this evolution of the transportation sector. It focuses on not only urban planning but relevant themes in law and ethics to form a unified resource on the practicality of AI use.

Sensors Fault Diagnosis Trends and Applications Piotr Witczak, 2021-09-01 Fault diagnosis has always been a concern for industry. In general, diagnosis in complex systems requires the acquisition of information from sensors and the processing and extracting of required features for the classification or identification of faults. Therefore, fault diagnosis of sensors is clearly important as faulty information from a sensor may lead to misleading conclusions about the whole system. As engineering systems grow in size and complexity, it becomes more and more important to diagnose faulty behavior before it can lead to total failure. In the light of above issues, this book is dedicated to trends and applications in modern sensor fault diagnosis.

VANET Hannes Hartenstein, Kenneth Laberteaux, 2009-11-04 This book provides an invaluable introduction to inter-vehicular communications, demonstrating the networking and communication technologies for reducing fatalities, improving transportation efficiency and minimising environmental impact. Innovations in Multi-Agent Systems and Application - 1 Dipti Srinivasan, 2010-08-10. This book provides an overview of multi agent systems and several applications that have been developed for real world problems. Multi agent systems is an area of distributed artificial intelligence that emphasizes the joint behaviors of agents with some degree of autonomy and the complexities arising from their interactions. Multi agent systems allow the subproblems of a constraint satisfaction problem to be subcontracted to different problem solving agents with their own interest and goals. This increases the speed, creates parallelism, and reduces the risk of system

collapse on a single point of failure Different multi agent architectures that are tailor made for a specific application are possible They are able to synergistically combine the various computational intelligent techniques for attaining a superior performance This gives an opportunity for bringing the advantages of various techniques into a single framework It also provides the freedom to model the behavior of the system to be as competitive or coordinating each having its own advantages and disadvantages

Guide to Wireless Ad Hoc Networks Sudip Misra,Isaac Woungang,Subhas Chandra Misra,2009-03-02 Overview and Goals Wireless communication technologies are undergoing rapid advancements The past few years have experienced a steep growth in research in the area of wireless ad hoc networks The attractiveness of ad hoc networks in general is attributed to their characteristics features such as ability for infrastructure less setup minimal or no reliance on network planning and the ability of the nodes to self organize and self configure without the involvement of a centralized n work manager router access point or a switch These features help to set up a network fast in situations where there is no existing network setup or in times when setting up a fixed infrastructure network is considered infeasible for example in times of emergency or during relief operations Even though ad hoc networks have emerged to be attractive and they hold great promises for our future there are several challenges that need to be addressed Some of the well known challenges are attributed to issues relating to scalability quality of service energy efficiency and security
