Success Strategies and Knowledge Transfer in Cross-Border Consulting Operations Roger Svensson,2012-12-06
Success Strategies and Knowledge Transfer in Cross Border Consulting Operations analyzes the international operations of consulting firms Apart from developing a theoretical framework which differs from traditional theories about international trade the main issues analyzed in this book are 1 Success determinants when tendering for international consulting contracts 2 The choice between exports acquisition of a local firm or establishing a greenfield office when entering foreign markets 3 The extent and nature of knowledge transfer to emerging markets 4 The role of development agencies in international consulting projects 5 The trend towards and consequences of more management services included in international projects 6 The effects on competition when state owned consulting firms are allowed to operate in the international market The empirical analysis of these issues is based on a unique database of individual tender documents which Swedish consulting firms have submitted abroad **Characteristics, Causes, and Implications of the 1998 Wasatch Front Landslides, Utah**

Francis X. Ashland,2003 The majority of the 1998 Wasatch Front landslides were likely triggered following a cumulative rise in ground water levels resulting from four or more successive years of above normal precipitation Triggering of landslide movement likely coincided with a transient ground water level rise associated with the spring snowmelt and contemporaneous above normal precipitation In most Wasatch Front areas 1998 was the wettest as well as the last year of the precipitation period An increase in landslide activity began in 1997 following two to four successive years of above normal precipitation This study examines the relation between the 1998 landslides and the 1995 98 precipitation period 1993 98 in Spanish Fork Canyon Accordingly this study investigates the significance of the most recent precipitation period in relation to the historical precipitation record and compares it with the 1980 86 period In addition other causes of the 1998 landsliding are explored most importantly hillside modification related to residential development This study also examines several issues and their implications related to the 1998 Wasatch Front landslides including the susceptibility to reactivation of pre existing landslides consideration of the state of landslide activity and the possibility of developing landslide movement prediction tools based on an instability threshold concept The majority of the landslides discussed occurred near urbanized areas of the Wasatch Front and consisted of either translational or rotational earth slides in pre existing landslide areas The

discussion and conclusions are limited to these landslides and locations The case histories presented provide new data intended to further the understanding of landslide hazards in the Wasatch Front
