## 2008 Conference on Precision Electromagnetic Measurements (CPEM)

**T**HE 2008 Conference on Precision Electromagnetic Measurements (CPEM) was held in Broomfield, CO, near Boulder, from June 8 through June 13. Some 430 delegates from 43 countries registered for the 26th CPEM, although several delegates were unable to attend because of problems in obtaining entry visas. Three hundred seventy-two papers (about one-third oral) were presented at the conference, and of these, 113 were submitted as extended papers for inclusion in this CPEM 2008 Special Issue of the IEEE TRANSACTIONS ON INSTRUMENTATION AND MEASUREMENT. All submitted papers were reviewed by at least two experts in the appropriate field. As a result of these reviews, 88 papers were accepted for publication.

In the past, all extended papers were submitted in paper form, along with the necessary documentation; the papers were physically distributed to the session chairs and then to reviewers. After review, the paper copies were returned to the Editors, and comments were sent to the authors. After the reviewer's comments were incorporated into the manuscript, the paper was transmitted to the IEEE Editor either physically or electronically.

For CPEM 2008, all paper submission was electronic using the AllenTrack System from Allen Publishing. Authors were able to upload their manuscripts beginning the week before CPEM, and paper submission closed on the last day of the conference. Electronic copies of the papers were routed to prospective reviewers, whose comments were posted on secure websites for authors' reference. The revised manuscripts were available for the Guest Editors to comment on, accept, or reject. After acceptance, the papers were routed directly to the IEEE for prepublication posting on IEEE Xplore and for subsequent publication in the Transactions.

In addition to the electronic submission process, the maximum page length was expanded from four to six pages, and the Guest Editors demanded more substantial abstracts, conclusions, and literature reviews than for past issues. The intent was to increase the quality of the papers submitted to the Transactions by giving authors more space to describe their work, and it was largely successful, as the accepted papers were generally of very high quality.

As with any new venture, there were some growing pains with the new submission process. Some authors had apparently gotten too accustomed to the four-page limit, and as a result, their papers required significant expansion, particularly in the

literature review and abstracts. In addition, for future conferences, it would seem to be a good idea to require the extended papers to be submitted prior to the corresponding technical session so that session chairs know how many reviewers to find. Overall, however, the submission process went smoothly and was quite successful.

We would like to express our appreciation to the authors that submitted papers, particularly those who were prompt in revising their papers according to the suggestions of the reviewers and editors. The reviewers are also to be acknowledged for their uniformly excellent and timely reviews; in most cases, the Guest Editors had very few comments to add to those of the reviewers.

The session chairs are to be commended for finding expert reviewers, and we wish to thank them for their efforts in this critical step. The CPEM 2008 Session Chairs were

*Recent Advances in Metrology and Fundamental Constants* T.J. Quinn,S. Leschiutta,2001-12-18 The exchange between physics and metrology is always fascinating and exciting Many are the open problems in physics that call for extremely precise standards many are the advances in metrology made possible by a deep and assiduous study of the underlying physics One has just to think of the enormous sophistication required in the measurements of some absolute quantities such as the Avogadro the gas or the gravitational constants It is also worth noticing that not only the units of a metrological system are interrelated through the fundamental constants but also the latter find their full significance when they are determined through the most exacting metrological experiments Over the past decade many improvements took place and these are discussed in this book from one side the old caesium SI second definition has found a new realisation with the fountain approach replacing the classical thermal atomic beam The use of cold atom techniques in which bunches of inert atoms are collected slowed down and cooled has opened a number of new and unexpected avenues for metrology and fundamental constants one of these possibilities being the atom interferometry Another important quantum jump was the demonstration of the possibility of performing a direct frequency division in the visible using ultra short femtosecond pulses In addition the possibility of counting electrons or photons gave a fundamental support to the development of single electron capacitance standards and to new scenarios in the absolute calibration of photo detectors
