This conference was dedicated to the memory of Professor Esen Ozkaran. He was a great researcher who made an essential contribution to the development of information systems. This conference was organized by the Computer Engineering Department of Dokuz Eylul University of Izmir. This department was established in 1994 by the founding chairman Professor Ozkaran and there he worked for the last few years of his life. The main goal of the conference was to bring together researchers from all around the world working in different areas of information systems to share new ideas and to represent their latest results. We received 80 submissions from 30 countries. The Program Committee selected 44 papers for presentation at the conference. The invited and accepted contributions cover a large variety of topics: general aspects of information systems, data bases, data warehousing, computer networks, Internet technologies, content based image retrieval, information retrieval, constraint programming and artificial intelligence. The success of the conference was dependent upon the hard work of a large number of people. We gratefully acknowledge the members of the Program Committee who helped to coordinate the process of refereeing all submitted papers. We also thank all the other specialists who reviewed the papers.

Software Engineering, Artificial Intelligence, Networking and Parallel/Distributed Computing Roger

Lee, Naohiro Ishii, 2009-04-30 The purpose of the 10th ACIS International Conference on Software Engineering, Artificial Intelligence, Networking and Parallel Distributed Computing (SNPD) 2009 held in Daegu, Korea on May 27-29, 2009, the 3rd International Workshop on e-Activity (IWEA) 2009 and the 1st International Workshop on Enterprise Architecture Challenges and Responses (WEACR) 2009 is to aim at bringing together researchers and scientists, businessmen and entrepreneurs, teachers and students to discuss the numerous fields of computer science and to share ideas and information in a meaningful way. Our conference officers selected the best 24 papers from those papers accepted for presentation at the conference in order to publish them in this volume. The papers were chosen based on review scores submitted by members of the program committee and underwent further rounds of rigorous review. In chapter 1, Igor Crk and Chris Gniady propose a network aware energy management mechanism that provides a low cost solution that can significantly reduce energy consumption in the entire system while maintaining responsiveness of local interactive workloads. Their dynamic mechanisms reduce the decision delay before the disk is spun up, reduce the number of erroneous spin ups in local workstations, decrease the network bandwidth and reduce the energy consumption of individual drives. In chapter 2, Yoshihito Saito and Tokuro Matsuo describe

a task allocation mechanism and its performance concerning with software developing They run simulations and discuss the results in terms of effective strategies of task allocation
