American Synthetic Rubber Research Program:

The American Synthetic Rubber Research Program Peter J. T. Morris, 2017-01-30 This history of the government funded synthetic rubber research program 1942 1956 offers a rare analysis of a cooperative research program geared to the improvement of existing products and the creation of new ones The founders of the program believed the best way to further research in the new field was through collaboration among corporations universities and the federal government Morris concludes that in fact the effort was ultimately a failure and that vigorous competition proves the best way to stimulate innovation Government programs like the rubber research program are far better at improving existing products the author contends than creating wholly new ones The American Synthetic Organic Chemicals Industry Kathryn Steen, 2014 American Synthetic Organic Chemicals Industry War and Politics 1910 1930 **Chains of Opportunity** Mark D. Bowles, 2008 While plastics was a one word joke in the 1967 movie The Graduate plastics and other polymers have never been a laughing matter at the University of Akron with its world renowned College of Polymer Science and Polymer Engineering Chains of Opportunity The University of Akron and the Emergence of the Polymer Age 1909 2007 tells the story of the university's rise to prominence in the field beginning with the world's first academic course in rubber chemistry almost a century ago Chains of Opportunity explores the university's pioneering contributions to rubber chemistry polymer science and polymer engineering It traces the school's interaction with Akron rubber giants such as Goodyear and Firestone recounts its administration of the federal government's synthetic rubber program during World War II and describes its role in the development and professionalization of the academic discipline in polymers The University of Akron has been an essential force in establishing the polymer age that has become a pervasive part of our material lives in everything from toys to biotechnology BOOK JACKET *Technology and the American Economy* United States. and other biological compounds that have revolutionized western medicine For these reasons the history of the discipline tells an important story about how both our material and intellectual worlds have come to be as they are Yasu Furukawa explores that history by tracing the emergence of macromolecular chemistry the true beginning of modern polymer science It is a lively book given human interest through its focus on the work of two of the central figures in the development of macromolecular chemistry Hermann Staudinger and Wallace Carothers In *Inventing Polymer Science* Furukawa examines the origins and development of the scientific work of Staudinger and Carothers illuminates their different styles in research and professional activities and contrasts the peculiar institutional and social milieus in which they pursued their goals

Netherlands Norway Switzerland the United Kingdom the United States the volume addresses four successive themes The first one concerns the part played by the United States and that country's action on the international scene This in turn leads to the subsequent query Did the productivity missions constitute tools for modernisation or were they devices of domination The second part considers three national experiences the United Kingdom France and Japan The third part examines a number of branches iron and steel electrical engineering petrochemicals and the tyre industry The final part seeks to assess the impact of the missions Ultimately one needs must make a distinction between the rhetoric of productivity on the one hand and actual achievements on the other the missions were part of a wider process of Americanisation wherein lies one of the keys to the economic miracles of the post war era Page 4 of cover News Bulletin ,1960 **Miscellaneous**

Publication - National Bureau of Standards United States. National Bureau of Standards,1934 **National Bureau of Standards Miscellaneous Publication** ,1945 Arsenal of World War II Paul A. C. Koistinen,2004 Prolific munitions production keyed America's triumph in World War II but so did the complex economic controls needed to sustain that production Artillery tanks planes ships trucks and weaponry of every kind were constantly demanded by the military and readily supplied by American business While that relationship was remarkably successful in helping the U S win the war it also raised troubling issues about wartime economies that have never been fully resolved Paul Koistinen's fourth installment of a monumental five volume series on the political economy of American warfare focuses on the mobilization of national resources for a truly global war Koistinen comprehensively analyzes all relevant aspects of the World War II economy from 1940 through 1945 describing the nation's struggle to establish effective control over industrial supply and military demand and revealing the growing partnership between the corporate community and the armed services Koistinen traces the evolution of federal agencies mobilizing for war including the National Defense Advisory Commission the Office of Production Management and the Supply Priorities and Allocation Board and then focuses on the work of the War Production Board from 1942 1945 As the war progressed the WPB and related agencies oversaw the military's supply and procurement systems stabilized the economy while financing the war closely monitored labor relations and controlled the shipping and rationing of fuel and food In chronicling American mobilization Koistinen reveals how representatives of industry and the armed services expanded upon their growing prewar ties to shape policies for harnessing the economy and how federal agencies were subsequently riven with dissension as New Deal reformers and anti New Deal corporate elements battled for control over mobilization itself As the armed services emerged as the principal customers of a command economy the military industrial nexus consolidated its power and ultimately succeeded in bending the reformers to its will The product of exhaustive archival research Arsenal of World War II shows that mobilization meant more than simply harnessing the economy for war it also involved struggles for power and position among a great many interest groups and ideologies Nearly two decades in the making it provides an ambitious and enormously insightful overview of the emergence of the military industrial economy one

that still resonates today as America continues to wage wars around the globe **Determinants in the Evolution of the European Chemical Industry, 1900-1939** Anthony S. Travis, Harm G. Schröter, Ernst Homburg, Peter J.T.

Morris, 2013-04-17 The editors wish to thank the European Science Foundation for its support of the programme on the Evolution of Chemistry in Europe 1789 1939 as well as for sponsoring the publication of this volume Through the subdivision of this initiative that deals specifically with chemical industry it has been possible for historians of science technology business and economics to share often widely differing viewpoints and develop consensus across disciplinary and cultural boundaries The contents of this volume are based on the third of three workshops that have considered the emergence of the modern European chemical industry prior to 1939 the first held in Liege 1994 the second in Maastricht 1995 and the third in Strasbourg 1996 All contributors and participants are thanked for their participation in often lively and informative debates The generous hospitality of the European Science Foundation and its staff in Strasbourg is gratefully acknowledged

Introduction Emerging chemical knowledge and the development of chemical industry and particularly the interaction between them offer rich fields of study for the historian This is reflected in the contents of the three workshops dealing with the emergence of chemical industry held under the aegis of the European Science Foundation s Evolution of Chemistry in Europe 1789 1939 programme The first workshop focused mainly on science for industry 1789 1850 and the second on the two way traffic between science and industry 1850 1914 The third workshop dealing with the period 1900 1939 covers similar issues but within different and wider contexts *Encyclopedic Dictionary of Named Processes in Chemical*
