Past Climate Variability in South America and Surrounding Regions Francoise Vimeux, Florence Sylvestre, Myriam Khodri, 2009-08-04 South America is a unique place where a number of past climate archives are available from tropical to high latitude regions It thus offers a unique opportunity to explore past climate variability along a latitudinal transect from the Equator to Polar regions and to study climate teleconnections Most climate records from tropical and subtropical South America for the past 20 000 years have been interpreted as local responses to shift in the mean position and intensity of the InterTropical Convergence Zone due to tropical and extratropical forcings or to changes in the South American Summer Monsoon Further South the role of the Southern Hemisphere westerly winds on global climate has been highly investigated with both paleodata and coupled climate models However the regional response over South America during the last 20 000 years is much more variable from place to place than previously thought The factors that govern the spatial patterns of variability on millennial scale resolution are still to be understood The question of past natural rates and ranges of climate conditions over South America is therefore of special relevance in this context since today millions of people live under climates where any changes in monsoon rainfall can lead to catastrophic consequences

Climate and Culture Change in North America AD 900-1600 William C. Foster, 2012-05-15 Climate change is today's news but it isn't a new phenomenon Centuries long cycles of heating and cooling are well documented for Europe and the North Atlantic These variations in climate including the Medieval Warm Period MWP AD 900 to 1300 and the early centuries of the Little Ice Age LIA AD 1300 to 1600 had a substantial impact on the cultural history of Europe In this pathfinding volume William C Foster marshals extensive evidence that the heating and cooling of the MWP and LIA also occurred in North America and significantly affected the cultural history of Native peoples of the American Southwest Southern Plains and Southeast Correlating climate change data with studies of archaeological sites across the Southwest Southern Plains and Southeast Foster presents the first comprehensive overview of how Native American societies responded to climate variations over seven centuries He describes how as in Europe the MWP ushered in a cultural renaissance during which population levels surged and Native peoples substantially intensified agriculture constructed monumental architecture and produced sophisticated works of art Foster follows the rise of three dominant cultural centers Chaco Canyon in New Mexico Cahokia on the middle Mississippi River and Casas Grandes in northwestern Chihuahua Mexico that reached population levels comparable to those of London and Paris Then he shows how the LIA reversed the gains of the MWP as population levels and agricultural production sharply declined Chaco Canyon Cahokia and Casas Grandes collapsed and dozens of smaller villages also collapsed or became fortresses
