Block Errorcorrecting Codes A Computational Primer:

Block Error-Correcting Codes Sebastian Xambo-Descamps, 2012-12-06 Error correcting codes have been incorporated in numerous working communication and memory systems This book covers the mathematical aspects of the theory of block error correcting codes together in mutual reinforcement with computational discussions implementations and examples of all relevant concepts functions and algorithms This combined approach facilitates the reading and understanding of the subject The digital companion of the book is a non printable pdf document with hyperlinks The examples included in the book can be run with just a mouse click and modified and saved by users for their own purpose *Systems, Patterns and Data*

Engineering with Geometric Calculi Sebastià Xambó-Descamps, 2021-07-16 The intention of this collection agrees with the purposes of the homonymous mini symposium MS at ICIAM 2019 which were to overview the essentials of geometric calculus GC formalism to report on state of the art applications showcasing its advantages and to explore the bearing of GC in novel approaches to deep learning The first three contributions which correspond to lectures at the MS offer perspectives on recent advances in the application GC in the areas of robotics molecular geometry and medical imaging The next three especially invited hone the expressiveness of GC in orientation measurements under different metrics the treatment of contact elements and the investigation of efficient computational methodologies The last two which also correspond to lectures at the MS deal with two aspects of deep learning a presentation of a concrete quaternionic convolutional neural network layer for image classification that features contrast invariance and a general overview of automatic learning aimed at steering the development of neural networks whose units process elements of a suitable algebra such as a geometric algebra The book fits broadly speaking within the realm of mathematical engineering and consequently it is intended for a wide spectrum of research profiles In particular it should bring inspiration and guidance to those looking for materials and problems that bridge GC with applications of great current interest including the auspicious field of GC based deep neural networks

Critical Information Infrastructures Maitland Hyslop, 2007-09-05 Resilience is an increasingly important concept and quality in today's world It is particularly important in the area of Critical Infrastructures It is crucial in the area of Critical Information Infrastructure This is because since the year 2000 man has been dependent on information and telecommunications systems for survival particularly in the Organization for Economic Cooperation and Development OECD countries and because all other Critical Infrastructures depend upon to a greater or lesser extent Critical Information Infrastructure Until probably the late 1980s it would be fair to say that the defense of individual nation states depended upon a mixture of political will and armed might The fall of the Berlin Wall may have effectively ended the Cold War and with it a bipolar world but it brought globalization and a multipolar digital world in its wake Simply put a number of power vacuums were created and these have yet to be fully filled and settled In this New World many changes were afoot These changes include the increasing irrelevance of nation states in federated structures and the export of democracy on the back of

globalization One of the biggest changes though is the use of digital technology by the OECD countries This is on such a scale that these countries have become both dependent upon information technology and as individual states largely irrelevant to the new global electronic economy 1 This adaptation of Maslow's hierarchy of needs is attributed to KPMG
