You're Equal Samantha Standish, ARE YOU EQUAL A former attorney Samantha Standish discovered the answer to this question when she woke up one morning not attached to her body Her findings became the book You re Equal You re Equal is a unique perspective on equality because it's not political philosophical or religious The book is a description and interpretation of how equality works as a mechanic in the construction of reality Being out of body was like a physics field trip where I got to experience the structure of reality for a short while says Standish Imagine living the properties of an electromagnetic field That was what it was like Standish returned from that experience with the idea that the energy that composes matter exists in paradoxical undivided states and that this had significance for humans because it meant that nothing was divided To Standish everyone was equal because it wasn't possible to eliminate separate or leave out anything You re Equal is a balm to the soul and a must read for anyone that wants to understand the mechanics of equality from the ground up

manager's best friend is systems consolidation which is a euphemism for centralisation it may come somewhat as a surprise for you that this book investigates decentralisation in the context of content management systems It may seem quite obvious that content will and should be managed by the party who creates and owns the content and hence should be held in a somewhat centralised and managed location However over the past few years we have been witnesses of some important trends and developments which call for novel ways of thinking about content management and maybe even broader about computer systems in general First ongoing business globalization creates natural distribution of information at a corporate level as well as decentralization of control over business resources and business processes Changing alliances with partners require flexible architectures for content management that can adapt to changing constellations roles and access rights Second the need for outsourcing and resource efficiency has brought about concepts of virtualization recently culminating in the cloud computing buzzword Virtualization of content management services requires extremely scalable and flexible underlying information and communication architectures These kinds of solutions are theoretically and practically impossible to implement based on centralized client server architectures Third we are currently experiencing a dramatic shift in the roles of consumers in the Internet The times have gone when quality content was only delivered by publishers and news agencies Wikis and other Web 2.0 tools empower consumers to produce and publish their personal content
