Blood Relations Menstruation And The Origins Of Culture:

Blood Relations Christopher Knight, 1991 *Blood Relations* Chris Knight, 2013-10-15 The emergence of symbolic culture is generally linked with the development of the hunter-gatherer adaptation based on a sexual division of labor. This original and ingenious book presents a new theory of how this symbolic domain originated. Integrating perspectives of evolutionary biography and social anthropology within a Marxist framework, Chris Knight rejects the common assumption that human culture was a modified extension of primate behavior and argues instead that it was the product of an immense social, sexual, and political revolution initiated by women. Culture became established, says Knight, when evolving human females began to assert collective control over their own sexuality, refusing sex to all males except those who came to them with provisions. Women usually timed their ban on sexual relations with their periods of infertility while they were menstruating, and to the extent that their solidarity drew women together, these periods tended to occur in synchrony. The result was that every month, with the onset of menstruation, sexual relations were ruptured in a collective ritualistic way as the prelude to each successful hunting expedition. This ritual act was the means through which women motivated men not only to hunt but also to concentrate energies on bringing back the meat. Knight shows how this hypothesis sheds light on the roots of such cultural traditions as totemic rituals, incest, and menstrual taboos, blood sacrifice, and hunters' atonement rites. Providing detailed ethnographic documentation, he also explains how Native American, Australian Aboriginal, and other magico-religious myths can be read as derivatives of the same symbolic logic.

Menstruation and Procreation in Early Modern France Cathy McClive, 2016-03-03 Early modern bodies, particularly menstruating and pregnant bodies, were not stable signifiers. *Menstruation and Procreation in Early Modern France* presents the first full-length discussion of menstruation and its uncertain connections with embodied sex, gender, and reproduction in early modern France. Attitudes to menstruation are explored in three interlinked arenas: medicine, moral theology, and law, across the sixteenth to the eighteenth centuries. Drawing on a wide range of diverse sources, including court records and private documents, the author uses case studies to explore the relationship between the exceptional corporeality of individuals and attempts to construct menstrual norms, reflecting on how early modern individuals lay or otherwise grappled with the enigma of menstruation. She analyzes how early modern men and women accounted for the function, recurrence, and appearance of menstruation, from its role in maintaining health to the link between other physiological and bodily processes, including those found in both male and female bodies. She questions the assumption that menstruation was exclusively associated with women by the second half of the eighteenth century, arguing that whilst sex-related menstruation was not sex-specific even at the turn of the nineteenth century. Menstruation remains a contentious topic today. This book is not therefore simply a study of periods in early modern France but is also, of necessity, an exploration about the nature and constitution of historical evidence, particularly bodily evidence, and how historians use this evidence. It raises important questions about the concept of certainty and about the value of

observation testimony expertise the nature of language and the construction of bodily truths about the body as witness and the body as evidence *Jewish History and Jewish Memory* Yosef Hayim Yerushalmi, 1998 Publication of Yosef Yerushalmi's *Zakhor* in 1982 inspired a generation of scholarly inquiry into historical images and myths the construction of the Jewish past and the making and meaning of collective memory Here eminent scholars in their respective fields extend the lines of his seminal study into topics that range from medieval rabbinics homiletics kabbalah and Hasidism to antisemitism Zionism and the making of modern Jewish identity Essays are clustered around four central themes historical consciousness and the construction of memory the relationship between time and history in Jewish thought the demise of traditional forms of collective memory and the writing of Jewish history in modern times *Carl Jung and the Evolutionary Sciences* Gary Clark, 2024-10-22 This book reevaluates Carl Jung's ideas in the context of contemporary research in the evolutionary sciences Recent work in developmental biology as well as experimental and psychedelic neuroscience have provided empirical evidence that supports some of Jung's central claims about the nature and evolution of consciousness Beginning with a historical contextualisation of the genesis of Jung's evolutionary thought and its roots in the work of the 19th century Naturphilosophen the book then outlines a model of analytical psychology grounded in modern theories of brain development and life history theory The book also explores research on evolved sex based differences and their relevance to Jung's concept of the anima and animus Seeking to build bridges between analytical psychology and contemporary evolutionary studies and associated fields this book will appeal to scholars of analytical and depth psychology as well as researchers in the evolutionary and brain sciences *Everyday Discourses of Menstruation* Victoria Louise Newton, 2016-05-24 Menstruation is a topic which is both everyday and sensitive From Leviticus to Pliny to twentieth century debates around menotoxin to advertising and having the painters in Victoria Newton's book offers a lively and innovative exploration of the social and cultural dimensions of menstruation Through in depth interviews with men and women the book explores the many different ways in which this sensitive topic is spoken about in British culture Looking specifically at euphemism jokes popular knowledge everyday experience and folklore the book provides original insights into the different discourses acting on the menstruating body and encourages debate about how these help to shape our everyday attitudes towards menstruation

Origins of Psychopathology Horacio Fabrega (Jr.), 2002 What are the origins of human psychopathology Is mental illness a relatively recent phenomenon or has it been with us throughout evolution In *Origins of Psychopathology* Horacio Fabrega Jr employs principles of evolutionary biology to better understand the significance of mental illness He explores whether what psychiatry has categorized as mental disorders could have existed during earlier phases of human evolution Fabrega approaches the prominent features of mental disorders as adaptive responses to the environment and life's circumstances which in turn can only be understood in the context of our evolutionary past Taking his cue from theoretical issues raised by research into primate behavior and early hominid evolution he poses the question What if any aspects of mental illness are

rooted in our evolution Does mental illness occur in primates and other animals and if so what does this tell us about mental illness in human evolution How has mental illness played an adaptive role How has the development of language and higher cognitive functions affected characteristics of psychopathology F brega synthesizes insights from both the clinical and the evolutionary points of view This facet of psychopathology which involves its origins and manifestations viewed across the expanse of human evolution has until now been largely neglected in psychiatric education theory and practice History and Theory in Anthropology Alan Barnard,2000-06-15 Anthropology is a discipline very conscious of its history and Alan Barnard has written a clear balanced and judicious textbook that surveys the historical contexts of the great debates and traces the genealogies of theories and schools of thought It also considers the problems involved in assessing these theories The book covers the precursors of anthropology evolutionism in all its guises diffusionism and culture area theories functionalism and structural functionalism action centred theories processual and Marxist perspectives the many faces of relativism structuralism and post structuralism and recent interpretive and postmodernist viewpoints *Cultural Forests of the Amazon* William Balée,2013-08-20 Winner of the Society for Economic Botany s Mary W Klinger Book Award Cultural Forests of the Amazon is a comprehensive and diverse account of how indigenous people transformed landscapes and managed resources in the most extensive region of tropical forests in the world Until recently most scholars and scientists as well as the general public thought indigenous people had a minimal impact on Amazon forests once considered to be total wildernesses William Balée s research conducted over a span of three decades shows a more complicated truth In Cultural Forests of the Amazon he argues that indigenous people past and present have time and time again profoundly transformed nature into culture Moreover they have done so using their traditional knowledge and technology developed over thousands of years Balée demonstrates the inestimable value of indigenous knowledge in providing guideposts for a potentially less destructive future for environments and biota in the Amazon He shows that we can no longer think about species and landscape diversity in any tropical forest without taking into account the intricacies of human history and the impact of all forms of knowledge and technology Balée describes the development of his historical ecology approach in Amazonia along with important material on little known forest dwellers and their habitats current thinking in Amazonian historical ecology and a narrative of his own dialogue with the Amazon and its people Climate, Affluence, and Culture Evert Van de Vliert,2008-12-22 Everyone everyday everywhere has to cope with climatic cold or heat to satisfy survival needs using money This point of departure led to a decade of innovative research on the basis of the tenet that climate and affluence influence each other s impact on culture Evert Van de Vliert discovered survival cultures in poor countries with demanding cold or hot climates self expression cultures in rich countries with demanding cold or hot climates and easygoing cultures in poor and rich countries with temperate climates These findings have implications for the cultural consequences of global warming and local poverty Climate protection and poverty reduction are used in combination to sketch four scenarios for shaping cultures

Culture, Evolution, and Menopause Hippokratis Kiaris, 2024-10-01 The book *Culture Evolution and Menopause* focuses on the crossroads of anthropology the history of civilization and evolutionary biology Culture is usually seen as opposing biological imperatives Humans have always tried to overcome the burden of environmental and their own biological limits by developing science and technology and by building communities The culture of care that humanity established supersedes the biological costs and benefits that govern life for other species Thus humans have founded a new trajectory within which biology becomes of lesser significance This book re examines these perceptions to conclude that the traditional dichotomy between nature and nurture is a false one Nurture represents an indispensable component of human nature From a biological perspective this nurturing nature sets as its objective the elimination of the impact of natural selection aiming for the perseverance of our species against all forces that may instruct otherwise By canceling the translation of potential differences in biological performance or fitness into differences in reproductive success humans for the first time on earth have defeated the typical logic that guides evolution This disruption of the link between biology and fate results in an existentialist crisis to resolve it people must re examine their position in the world and their individual and collective goals The book starts with a discussion of the concept of randomness and how this applies to biology then it delves into a description of how the culture of care dominates the history of *H sapiens* Focusing on the West intrinsic controversies of modernity are discussed such as the concurrent pursuit of reason and individual advancement or the annulment of the interpretation of resource abundance into population growth The book concludes with some paradoxical consequences of the defeat of evolutionary logic and the emergence of biological existentialism as the overarching state of our being

Blood Matters Bonnie Lander, Eleanor Decamp, 2018-05-04 *Blood Matters* explores blood as a distinct category of inquiry in medieval and early modern Europe and draws together scholars who might not otherwise be in conversation

Sweetening the Pill Holy Grigg-Spall, 2013-10-07 Millions of healthy women take a powerful medication every day from their mid teens to menopause the Pill but few know how this drug works or the potential side effects Contrary to cultural myth the birth control pill impacts on every organ and function of the body and yet most women do not even think of it as a drug Depression anxiety

paranoia rage panic attacks just a few of the effects of the Pill on half of the over 80% of women who pop these tablets during their lifetimes When the Pill was released it was thought that women would not submit to taking a medication each day when they were not sick Now the Pill is making women sick However there are a growing number of women looking for non hormonal alternatives for preventing pregnancy In a bid to spark the backlash against hormonal contraceptives this book asks Why can't we criticize the Pill
