## **Blood Smears Reinterpreted:**

*Blood Smears Reinterpreted* Marcel Bessis, Maurice Gaillard, George Brecher, 1977-10-01      *Blood Smears Reinterpreted* Marcel Bessis, 2012-12-06 The translation of *Blood Smears Reinterpreted* was begun when the French original was still undergoing revisions I was accorded the opportunity to question any statement or turn of phrase that was unclear to me or appeared liable to misinterpretation It is my hope that as a result ambiguities particularly those inherent in differences between American and European usage have been removed and that I have at least approached the ultimate goal of any translation to reflect the author's intention accurately while remaining as readable as the original Beyond the role of translator I was encouraged to assume the role of critic As a result some pages or even single sentences were hotly debated sometimes for hours as Marcel Bessis insisted that any interpretations on which we could not agree should be so indicated In fact our discussion invariably ended in agreement though they led to changes of a sentence here or a word there and on occasion to the addition of a footnote or a brief paragraph

*The Development of the Red Pulp in the Spleen* V. Grouls, B. Helpap, 2012-12-06 In many aspects hematopoiesis in newborn rodents especially in rats resembles hematopoiesis in the human fetus in the 6th 7th month of gestation In man the transition from the stage of liver to bone marrow erythropoiesis takes place at this time Bessis 1973 In rodents however the liver is almost the only place where hematopoiesis occurs until birth Thereafter it is replaced to a growing extent by the bone marrow which so far consists mainly of immature mesenchymal cells Maximow 1910 Cuda 1970 Thus hematopoietic precursor cells appear in the sternum only around 30 h after birth Just as in premature human infants a macrocytic anemia can be demonstrated in normal neonatal rats Lucarelli et al 1964 1968 Beside liver fetal and bone marrow the spleen is involved in hematopoiesis In rodents like rats and mice splenic hematopoiesis persists more or less markedly until adulthood in man however it ceases after birth and reappears only under certain pathological conditions Fischer et al 1970 Hennekeuser et al 1967 Fresen 1960

*New Approaches to the Treatment of Leukemia* Emil J. Freireich, 2012-12-06 The

European School of Oncology came into existence to respond to a need for information education and training in the field of the diagnosis and treatment of cancer. There are two main reasons why such an initiative was considered necessary. Firstly, the teaching of oncology requires a rigorously multidisciplinary approach which is difficult for the Universities to put into practice since their system is mainly disciplinary orientated. Secondly, the rate of technological development that impinges on the diagnosis and treatment of cancer has been so rapid that it is not an easy task for medical faculties to adapt their curricula flexibly. With its residential courses for organ pathologies and the seminars on new techniques, laser monoclonal antibodies, imaging techniques etc, or on the principal therapeutic controversies, conservative or mutilating surgery, primary or adjuvant chemotherapy, radiotherapy alone or integrated, it is the ambition of the European School of Oncology to fill a cultural and scientific gap and thereby create a bridge between the University and Industry and between these two and daily medical practice.

*Molecular Biology of Hemopoiesis* Mehdi Tavassoli, 2012-12-06 Perhaps no scientific field in recent years has gained in techniques and applications as much as molecular biology and it is certainly no exaggeration to say that among all the applications of molecular biology hematology in general and hemopoiesis in particular have benefited most Owing to the applications of molecular biology we now live in a golden era of hemopoiesis Our understanding of the intricate regulatory system in hemopoiesis has vastly expanded The potential for future exploration is ever expanding and finally the possibility of gene manipulation has provided the promise of fundamental treatment and cure of many genetic disorders involving hemopoietic cells In the ambience of this rapidly moving scientific era the necessity for review of what is being accomplished and where the technical potential is taking us needs no argument This volume presents the proceedings of the third annual symposium on the Molecular Biology of Hemopoiesis held in the Rye Town Hilton New York November 6 and 7 1987 under the auspices of New York Medical College Valhalla New York The fact that this was the third regular symposium covering this area in itself testifies to a need for exchange of the rapidly developing knowledge in this area But this third symposium also coincided with the centennial of the National Institutes of Health and consequently the symposium was dedicated to this festive occasion

Red Cell Rheology M. Bessis, S.B. Shohet, N. Mohandas, 2012-12-06 Hemolysis during filtration through micropores studied by Chien et al I showed a dependence on pressure gradient and pore diameter that at the time of publication did not permit an easy interpretation of the hemolytic mechanism Acting on the assumption that thresholds of hemolysis are easier to correlate with physical forces than extents of hemolysis we performed a series of experiments repeating some of the conditions reported in I and then focusing on low L1P in order to define better the thresholds of hemolysis for several pore sizes Employing a model of a deformed red cell shape at the pore entrance based on micropipette observations we related the force field in the fluid to a biaxial tension in the membrane The threshold for lysis correlated with a membrane tension of 30 dynes/cm This quantity is in agreement with lysis data from a number of other investigators employing a variety of mechanisms for introducing membrane tension The sequence of events represented here is a Fluid forces and pressure gradients deform the cell into a new elongated shape b Extent of deformation becomes limited by the resistance of the cell membrane to undergo an increase in area c Fluid forces and pressure gradients acting on the deformed cell membrane cause an increase in biaxial tension in the membrane d When the strain caused by this

tension causes pores to open in the membrane the threshold for hemolysis has been reached 2

## **Experimental**

**Hematology Today 1979** S. J. Baum, G. D. Ledney, 2013-03-12

**Dynamic Morphology of Leukemia Cells** H. Felix, G.

Haemmerli, P. Sträuli, 2012-12-06 Dynamic Morphology is the attempt to correlate surface architecture and shape of fixed cells as visualized by scanning electron microscopy SEM with the behavior of living cells recorded by microcinematography MCM If SEM and MCM are used concurrently for the analysis of cell populations a dynamic interpretation of SEM photographs is only valid if the experimental conditions are identical for the two techniques This is achieved by allowing the cells to settle on a glass surface where they remain long enough to perform their various activities under conditions identical for both techniques for technical details see Methodology The analysis of a population necessitates the study of a large number of cells This prerequisite is met by operating the scanning electron microscope at low levels of magnification and by using culture chambers for cinematography It can be argued that the examination of attached cells excludes a complete SEM survey of a population as cells not adhering from the outset or becoming detached during the different preparatory steps are lost For this cinematography proved to be a reliable control All cell types recognized in time lapse films were also seen in scanning electron SE micrographs Another and more general objection to a dynamic interpretation concerns the artificiality of cellular behavior on glass This is true but does not invalidate comparative studies making use of this substrate

Greene, 2015-12-23 Erythrocytes of the Rhesus and Cynomolgus Monkeys addresses the morphologic quantitative and generative aspects of the erythrocytes of the rhesus monkey *Macaca mulatta* and the cynomolgus monkey *Macaca fascicularis* long tailed macaque crab eating monkey These two species are the most commonly selected nonhuman primates for basic science and clinical *Pathophysiology* Alois A.A. Bühlmann, Ernst R. Froesch, 2012-12-06 No doubt there are many ways to practice good medicine whatever this may be Forty years ago the history observation and clinical examination of a patient led to diagnosis and therapy Since then we have learned a great deal about the biochemical and physiologic processes in the human body and about the pathogenetic mechanisms by which they are disturbed and lead to disease Today the basis of clinical judgment and patient management is the understanding of pathogenetic mechanisms of disease This concise and basic text of pathophysiology introduces the medical student to the basic pathophysiologic mechanisms Each chapter begins with a short outline of the general physiologic and biochemical principles of an organ a system or a metabolic process their possible derangements are described with emphasis on the more important and more frequently occurring diseases Although the primary purpose is to convey a basic understanding of clinical medicine to first year medical students many students have used this book as a convenient reference up to and after graduation *Platelet Heterogeneity* John Martin, Anthony Trowbridge, 2012-12-06 Battle is a practical and sometimes lasting way of solving man's problems It relies on the strength of the combatants and ignores the truth of the dispute Discussion face to face can dissolve attitudes which have incorrectly determined judgements The most striking example of this that I know is a Battle in Ireland in the eleventh century where the king of Leinster fought a Viking prince The Icelanders had raided Ireland for several generations in search of women which they lacked since most of the population of Iceland were men who had arrived there by rowing long boats from Norway The prince was leading such a raid for the first time Standing in the prow of the leading boat he saw Irish cavalry galloping along the beach to meet them As they approached the shore the Irish king rode out of the band to challenge single combat The Iclander jumped into the surf to meet him As they raised their swords each realized that the other's face was like his own When the Irish king spoke the other recognized the language It had been spoken in Iceland by his grandmother who had been captured and taken there from Ireland Swords were dropped and replaced by drinking horns It was soon established that they were cousins The battle gave way to a life time of close cooperation **Freeze-Etch Histology** L. Orci, A. Perrelet, 2012-12-06 The development of the electron microscope brought one to the other The purpose of this book is to in a new era in which cell structures could be provide a bridge to help those who are familiar visualized down to a macromolecular level It is of with conventional electron microscopy to cross course well recognized that some cell components into the less familiar freeze etching This has been can be modified or even completely lost during the done by providing paired photographs wherever complex sequence of fixation dehydration staining possible one showing the thin section of a tissue or and plastic embedding which is essential before a

cell the other a freeze etch replica of a similar thin section can be obtained Further only these cell material At the same time we have tried to provide components which can be made electron opaque a basis for interpretation of freeze etched structures can be visualized For these reasons the morpho and we hope the reader will find the first 23 Plates logist and cell biologist alike have to explore alter especially useful in this respect Because there are native techniques of specimen preparation which many excellent atlases of cell structure available at may avoid some of the artefacts inherent in con the present time we felt there was no need to ventional thin section electron microscopy and at provide lengthy discussions of each plate

Normal, Transformed and Leukemic Leukocytes A. Polliack, 2012-12-06 The scanning electron microscope SEM has been used with increasing frequency in recent years to study the surface mor phology of normal transformed and malignant leukocytes Since the original reports on critical point dried lymphocytes published in 1973 results of other studies using improved methods have been reported giving rise to some controversy in this field and this is discussed in the text of the atlas Advances in preparatory techniques recorded during the past 3 years have also contributed much to a better understanding of cell surface phenomena as seen under the SEM The text of the atlas traces the developments in this field chronologically summarizes the available literature and presents the current situation in the light of the most recent studies in this field The photographs were selected to illustrate the spectrum of surface morphology of the different cell types obtained from normal individuals and patients with disease states Hopefully the atlas will serve as a guide for future studies and as an illustration of what SEM has to offer in providing details of surface architecture
