*Biomedical Index to PHS-supported Research*, 1987 *Biomaterials in Regenerative Medicine and the Immune System* Laura Santambrogio, 2015-09-04 The generation of tridimensional tissues assembled from scaffolding materials populated with biologically functional cells is the great challenge and hope of tissue bioengineering and regenerative medicine. The generation of biomaterials capable of harnessing the immune system has been particularly successful. This book provides a comprehensive view of how immune cells can be manipulated to suppress inflammation, deliver vaccines, fight cancer cells, promote tissue regeneration, or inhibit blood clotting and bacterial infections by functionally engineered biomaterials. However, long lived polymers such as those employed in orthopedic surgery or vascular stents can often induce an immune reaction to their basic components. As a result, this book is also an important step towards coming to understand how to manipulate biomaterials to optimize their beneficial effects and downplay detrimental immune responses. *The Medical Department of the United States Army in World War II*.
