Allied Aircraft Piston Engines of World War II now in its second edition coalesces multiple aspects of war driven aviation and its amazing technical accomplishments leading to the allied victory during the second world war. Not by chance the air battles that took place then defined much of the outcome of one of the bloodiest conflicts in modern history. Forward thinking airplane design had to be developed quickly as the war raged on and the engines that propelled them were indeed the focus of intense cutting edge engineering efforts. Flying higher faster and taking the enemy down before they even noticed your presence became a matter of life or death for the allied forces. Allied Aircraft Piston Engines of World War II Second Edition addresses British and American developed engines. It looks at the piston engines in detail as they supported amazing wins both in the heat of the air battles and on the ground supplying and giving cover to the troops. This new edition fully revised by the original author Graham White offers new images and information in addition to expanded specifications on the Rolls Royce Packard Merlin and the Pratt Whitney R 2800 engines.  Verbeek,2015-05-20 *Postphenomenological Investigations* Essays on Human Technology Relations provides an introduction
 to the school of thought called postphenomenology and showcases projects at the cutting edge of this perspective

Postphenomenology presents a unique blend of insights from the philosophical traditions of phenomenology and American pragmatism and applies them to studies of user relations to technologies. These studies provide deep descriptions of the ways technologies transform our abilities, augment our experience, and shape the world around us. This book proceeds with a preface by Don Ihde, postphenomenology's founder, and a detailed review of the main ideas of this perspective by the editors, Robert Rosenberger and Peter Paul Verbeek. The body of this volume is composed of twelve postphenomenological essays which reflect the expansive range, detail, orientation, and interdisciplinarity of this school of thought. These essays confront a broad assortment of topics, both abstract and concrete. Abstract topics addressed include metaphysics, ethics, methodology, and analysis of the notions of selfhood, skill, training, speed, and political activism. Just a few of the concrete topics studied include human-like interactive robots, ethics education, image interpretation in radiology, science fiction tropes, transportation history, wearable computing, and organ donation protocols for brain-dead bodies. The volume concludes with constructive critiques of postphenomenology by Andrew Feenberg, Diane Michelfelder, and Albert Borgmann, all figures whose work is relevant to postphenomenological projects.
