[Psychopharmacology in British Literature and Culture, 1780-1900](#) Natalie Roxburgh, Jennifer S. Henke, 2020-09-29 This collection of essays examines the way psychoactive substances are described and discussed within late eighteenth and nineteenth-century British literary and cultural texts. Covering several genres such as novels, poetry, autobiography, and non-fiction, individual essays provide insights on eighteenth and nineteenth-century understandings of drug effects of opium, alcohol, and many other plant-based substances. Contributors consider both contemporary and recent medical knowledge in order to contextualise and illuminate understandings of how drugs were utilised as stimulants, as relaxants for pleasure, as pain relievers, and for other purposes. Chapters also examine the novelty of experimentations of drugs in conversation with the way literary texts incorporate them, highlighting the importance of literary and cultural texts for addressing ethical questions.

**Madness in Plural Contexts: Crossing Borders, Linking Knowledge**, 2020-04-14 This volume was first published by Interdisciplinary Press in 2012. What are we to make of madness in contemporary times? Are we to study its various facets following the traditional path? Or should we turn towards a less explored territory? *Madness in Plural Contexts: Crossing Borders, Linking Knowledge* represents a decisive turn towards the

social and cultural in contemporary understandings of madness While it retains a focus on the diagnosis and interpretation of madness it focuses on mad identities in literature and the media It shows that the boundaries between the psychiatric psychological and the social cultural are blurred Madness appears on stage fuelled by absinthe across pages of novels detective TV shows and philosophical and theoretical dialogues It continues to be haunted by religious connotations while becoming a subtext of social exclusion in contested cultural geographies Madness becomes the rhythm of human life in the face of late modernity's unquenchable thirst for perfection success and progress **Tasty** John McQuaid, 2016-01-12 A fascinating and deeply researched investigation into the mysteries of flavor from our ancestors' first bites to ongoing scientific advances in taste and today's foodie revolution Performing Memory in Art and Popular Culture Liedeke Plate, Anneke Smelik, 2013 This volume pursues a new line of research in cultural memory studies by understanding memory as a performative act in art and popular culture The authors take their cue from the observation that art and popular culture enact memory and generate processes of memory They do memory and in this doing of memory new questions about the cultural dimensions of memory arise How do art objects and artistic practices perform the past in the present What is their relationship to the archive Does the past speak in the performed past or do we speak to it To what purpose do objects recall And for whom do they recollect Here authors combine a methodological focus on memory as performance with a theoretical focus on art and popular culture as practices of remembrance The essays in the book thus analyze what is at stake in the complex processes of remembering and forgetting of recollecting and disremembering of amnesia and anamnesis that make up cultural memory **Europe 1789 to 1914** John M. Merriman, J. M. Winter, 2006 A five volume survey of European history from the onset of the French Revolution to the outbreak of World War I Alphabetically arranged entries cover the period's most significant personalities and meaningful developments in the arts religion politics exploration and warfare For students scholars and general readers **Plant and Human Health, Volume 3** Munir Ozturk, Khalid Rehman Hakeem, 2019-02-11 Early anthropological evidence for plant use as medicine is 60 000 years old as reported from the Neanderthal grave in Iraq The importance of plants as medicine is further supported by archeological evidence from Asia and the Middle East Today around 1.4 billion people in South Asia alone have no access to modern health care and rely instead on traditional medicine to alleviate various symptoms On a global basis approximately 50 to 80 thousand plant species are used either natively or as pharmaceutical derivatives for life threatening conditions that include diabetes hypertension and cancers As the demand for plant based medicine rises there is an unmet need to investigate the quality safety and efficacy of these herbals by the scientific methods Current research on drug discovery from medicinal plants involves a multifaceted approach combining botanical phytochemical analytical and molecular techniques For instance high throughput robotic screens have been developed by industry it is now possible to carry out 50 000 tests per day in the search for compounds which act on a key enzyme or a subset of receptors This and other bioassays thus offer hope that one may eventually identify

compounds for treating a variety of diseases or conditions. However, drug development from natural products is not without its problems. Frequent challenges encountered include the procurement of raw materials, the selection and implementation of appropriate high throughput bioassays and the scaling up of preparative procedures. Research scientists should therefore arm themselves with the right tools and knowledge in order to harness the vast potentials of plant based therapeutics. The main objective of *Plant and Human Health* is to serve as a comprehensive guide for this endeavor. Volume 1 highlights how humans from specific areas or cultures use indigenous plants. Despite technological developments, herbal drugs still occupy a preferential place in a majority of the population in the third world and have slowly taken roots as alternative medicine in the West. The integration of modern science with traditional uses of herbal drugs is important for our understanding of this ethnobotanical relationship. Volume 2 deals with the phytochemical and molecular characterization of herbal medicine. Specifically, it will focus on the secondary metabolic compounds which afford protection against diseases. Lastly, Volume 3 focuses on the physiological mechanisms by which the active ingredients of medicinal plants serve to improve human health. Together, this three volume collection intends to bridge the gap for herbalists, traditional and modern medical practitioners and students and researchers in botany and horticulture.
