Vandamme,2012-12-06 Vitamins and related growth factors belong to the few chemicals with a positive appeal to most people the name evokes health vitality fitness strength each one of us indeed needs his daily intake of vitamins which should normally be provided via a balanced and varied diet However current food habits or preferences or food processing and preservation methods do not always assure a sufficient natural daily vitamin supply even for a healthy human being this is all the more true for stressed or sick individuals Although modern society is seldom confronted with the notorious avitaminoses of the past they do still occur frequently in overpopulated and poverty and famine struck regions in many parts of the world Apart from their in vivo nutritional physiological roles as growth factors for man animals plants and micro organisms vitamin compounds are now being introduced increasingly as food feed additives as medical therapeutical agents as health aids and also as technical aids Indeed today an impressive number of processed foods feeds cosmetics pharmaceuticals and chemicals contain extra added vitamins or vitamin related compounds and single or multivitamin preparations are commonly taken or prescribed These reflections do indicate that there is an extra need for vitamin supply other than that provided from plant and animal food resources Most added vitamins are indeed now prepared chemically and or biotechnologically via fermentation bioconversion processes Similarly other related growth factors provitamins vitamin like compounds i e **Modern Chromatographic Analysis Of Vitamins** Andre P. Taylor,2012-12-06 The Kellogg Company ranks

among the world's leading food manufacturers and it follows therefore that our corporate policies are important to human health. Indeed, food manufacturers as a combined industrial force must bear a major responsibility for the health of mankind because commercially processed foods are increasingly an indispensable part of the mosaic of human nutrition. This is particularly true in advanced industrialised societies. Here in Great Britain 40% of the people live in major conurbations and 41 % of the food they eat is either pre cooked or preserved, compounded or frozen, dehydrated or concentrated or modified in some other way to satisfy a consumer need or preference. These preferences are communicated to the manufacturer through the competitive forces of the market and are then translated into products in their most attractive and saleable form. However, it is questionable how far consumer choice depending largely on sight and taste can be relied upon to ensure a correctly balanced and nutritionally adequate diet. The probable answer is that if we all relied solely on our senses and our appetites many of us would be suffering from some form of nutritional imbalance. A serious nutritional responsibility therefore rests with the modern food manufacturer. We at Kellogg's are conscious of the need not only to make the foods we produce attractive to the purse and palate but to ensure that they make a sound contribution in nutritional terms.
