Collinearity-Preserving Functions between Desarguesian Planes David S. Carter, Andrew Vogt, 1980 Using concepts from valuation theory we obtain a characterization of all collinearity preserving functions from one affine or projective Desarguesian plane into another The case in which the planes are projective and the range contains a quadrangle has been treated previously in the literature Our results permit one or both planes to be affine and include cases where the range contains a triangle but no quadrangle A key theorem is that with the exception of certain embeddings defined on planes of order 2 and 3 every collinearity preserving function from one affine Desarguesian plane into another can be extended to a collinearity preserving function between enveloping projective planes
