The Book of Constellations Robin Kerrod, 2002 **Book of Constellations** Robin Kerrod, 2002-02-01 This fascinating narrative recounts the history of astronomy and with more than 100 full color illustrations it shows readers how to find the planets and constellations in the night sky In ancient times people thought that the Sun Moon and stars were gods They recorded their movements and imagined that the stars made pictures in the sky The Greeks and the Romans related these pictures of animals and men or constellations to their legends They also identified planets and named them for their gods Venus Mars Saturn and Jupiter Their observations marked the first step in the development of astronomy which today is a sophisticated science Modern astronomers have followed the tradition of naming heavenly bodies after ancient gods For instance the solar system's outer planets weren't identified until after the telescope's invention but with their discoveries they were named after Uranus a Greek god of the sky Neptune the Roman god of the sea and Pluto the Roman god of the underworld The author recounts the legends connected with many constellations including Aquarius Aries Cancer Orion and others This beautifully illustrated book helps readers navigate their way around the night sky as they learn the significance of heavenly bodies names Color photos and illustrations throughout **Mapping the Ocean of Stars: A Celestial**

MUNDANE STELLAR ASTROLOGY: The ancient science of Hermes on the secret connections between the stars and their reflections on earthly beings and events GIACOMO ALBANO,2021-08-25 The techniques of mundane astrology inherited from tradition are not the most suitable for explaining and predicting events as in reality they only capture the last links in the chain of celestial causes that underlie them In fact the primary causes of all events always and only reside in the Eighth Sphere that is in the sky of the constellations and fixed stars In this book the Stellar Astrology techniques are developed and applied to the real prediction of world events but also to natal charts Heaven and the stars that populate it are living beings The various parts of the starry sky constellations parts of constellations asterisms and single stars are not isolated but communicate with each other and therefore must be conceived as parts of a community similarly to the relations between men who live on this earth Indeed our communities and our earthly bonds are nothing but the reflection and manifestation of these celestial bonds And just as happens between men and between specific groups of men between some of these parts of the sky there are privileged relationships This book explains which are the astronomical and astrological factors that highlight these ties of kinship thus also indicating the existence of similar relations existing between the things of the world linked to those stars It is a real science based on rigorous criteria and in this book it is illustrated by providing the student with a general method that he can then apply to any person thing or event he intends to study in depth It will be seen how the identification of these stellar links is also essential for correctly interpreting a birth chart Only in this way astrology becomes what it should always be that is the sapiential matter par excellence as the only one capable of explaining and demonstrating the true nature and origin of earthly reality
