Of Light:

The Basics of Light John O. E. Clark, 2014-07-15 Though we take light for granted the world's greatest scientists have long puzzled over its nature properties and behavior Its incredible speed mysterious frequency relationship to color form of travel and uncanny ability to reflect refract diffract and be absorbed altogether make light the ever elusive quarry of science's greatest hunters of knowledge and understanding This is the enthralling account of their investigations and discoveries their conclusive insights and ongoing questions enhanced by full color photographs and explanatory visual aids If you thought you knew everything there is to know about light think again and read on **Beings of Light - We are All ONE**

Layne Layton, 2009-04-02 This is the story of Jonathan Smith an average guy who spent the majority of his life trying to find purpose and reason The only real quest he had was for truth He wanted more than anything to know who he really was where he came from and what would happen to him when he died Jonathan had all but abandoned any hope of knowing such things when through an unexplained occurrence he found himself outside of time and space in a Realm of Thought and Light Through his experience Jonathan came to understand who he was He once again was brought back into the knowledge of all the things he had forgotten He saw and experienced the Entities of Light the Beings of Light the Light World the World of Matter the Entities of Self and so on He learned the nature of good and evil and he came to understand why things appear the way they do Jonathan knowing he could stay in the World of Light came back to share his story with us that we might remember who and what we are Please visit www.laynelayton.com **An Introduction to Microscopy by Means of**

Light, Electrons, X-Rays, or Ultrasound Eugene Rochow, 2012-12-06 Many people look upon a microscope as a mere instrument to them microscopy is instrumentation Other people consider a microscope to be simply an aid to the eye to them microscopy is primarily an expansion of macroscopy In actuality microscopy is both objective and subjective it is seeing through an instrument by means of the eye and more importantly the brain The function of the brain is to interpret the eye's image in terms of the object's structure Thought and experience are required to distinguish structure from artifact It is said that Galileo 1564-1642 had his associates first look through his telescope microscope at very familiar objects to convince them that the image was a true representation of the object Then he would have them proceed to hitherto unknown worlds too far or too small to be seen with the unaided eye Since Galileo's time light microscopes have been improved so much that performance is now very close to theoretical limits Electron microscopes have been developed in the last four decades to exhibit thousands of times the resolving power of the light microscope Through the news media everyone is made aware of the marvelous microscopical accomplishments in imagery However little or no hint is given as to what parts of the image are derived from the specimen itself and what parts are from the instrumentation to say nothing of the changes made during preparation of the specimen **Transcending the Speed of Light** Marc Seifer, 2008-08-13 A study of the new scientific understanding of consciousness and the mind as a fifth dimension of reality Introduces the existence of a fifth

dimension one of mind an inner or hyperspace where time is transcended Shows how the barrier of the speed of light is actually a gateway demarking the fifth dimension Since the introduction of Descartes dualism in the seventeenth century the mind and the physical world have been viewed as disconnected entities Yet qualities of mind such as awareness purposeful action organization design and even decision making are present within the structure of matter and within the dimensions of space and time The space time continuum of scientists generally ignores the realm of the mind though phenomena such as imaginary numbers used by Einstein to combine space with time are concepts that only exist in the mind Marc Seifer contends that the inadequacy of four dimensional models to account for our experience of mental phenomena points to the consciousness of the mind as a higher organizing principle a fifth dimension where thoughts are as real and quantifiable as our familiar physical world He shows that because thought enables us to move backward and forward through time reflecting on the past and making plans for the future this fifth dimension of mind breaks the laws of relativity thereby transcending the speed of light His extensive study of this fifth dimension ranges from relativity and ether theory to precognition telepathy and synchronicity all from the perspective of the conscious universe
