Blowup Inflatable Art Architecture And Design:

Blowup Sean Topham,2002 A technological and philosophical history of inflatable art architecture and design in all aspects of life from children s toys to military craft *Blow-up: Inflatable art, architecture and design* Sean Topham,2002

The Moving Eye Edward Dimendberg,2019 Once the province of film and media scholars today the moving image is of broad concern to historians of art and architecture and designers of everything from websites to cities As museums and galleries devote increasing space to video installations which no longer presuppose a fixed viewer urban space becomes envisioned and planned through fly throughs and technologies such as GPS add data to the experience of travel moving images have captured the attention of geographers and scholars across the humanities and social sciences Their practice of mobility studies is remaking how we understand a contemporary world in relentless motion Media theorist and historian Anne Friedberg 1952 2009 was among the first practitioners of visual studies to theorize the experience of vision in motion Her books have become key points of reference in the discussion of the windows that frame images and the viewers in motion who perceive them Although widely influential beyond her own discipline Friedberg s work has never been the subject of an extended study *The Moving Eye* Film Television Architecture Visual Art and the Modern gathers together essays by renowned thinkers in media studies art history architecture and museum studies to consider the rich implications of her work for understanding film and video new media visual art architecture exhibition design urban space and virtual reality Ranging from early cinema to works by Le Corbusier Sergei Eisenstein Gordon Matta Clark and Pierre Huyghe to theories of the image in motion informed by psychoanalysis theories of the public sphere and animal studies each of the nine essays in the book advances the lines of inquiry commenced by Friedberg **Design: The Key Concepts** Catherine

McDermott,2007-10-30 This is the essential student s guide to Design its practice its theory and its history Respected design writer Catherine McDermott draws from a wide range of international examples Perspective, Projections and Design

Mario Carpo,Frédérique Lemerle,2013-04-15 The essays selected for this book presented in chronological order discuss various aspects of image making technologies geometrical knowledge and tools for architectural design focusing in particular on two historical periods marked by comparable patterns of technological and cultural change The first is the Renaissance characterized by the rediscovery of linear perspectives and the simultaneous rise of new formats for architectural drawing and design on paper the second the contemporary rise of digital technologies and the simultaneous rise of virtual reality and computer based design and manufacturing Many of the contributing authors explore the parallel between the invention of the perspectival paradigm in early modern Europe and the recent development of digitized virtual reality This issue in turn bears on the specific purposes of architectural design where various representational tools and devices are used to visualize bi dimensional aspects of objects that must be measured and eventually built in three dimensional space Portable

Architecture Robert Kronenburg,2007-06-07 Ideal for those who have been commissioned or are in competition who want to

learn about the very latest developments and trends in the area New introductions to each section focus the remit of the book and make it a complete and comprehensive guide to the topic **Dwell**, 2002-08 At Dwell we re staging a minor revolution We think that it s possible to live in a house or apartment by a bold modern architect to own furniture and products that are exceptionally well designed and still be a regular human being We think that good design is an integral part of real life And that real life has been conspicuous by its absence in most design and architecture magazines The Oxford Dictionary of Architecture James Stevens Curl, Susan Wilson, 2015 With over 6 000 entries this is the most authoritative dictionary of architectural history available *Material Architecture* John Fernandez, 2012-08-21 Composed of a series of essays this book deals with the broad issues affecting the nature of architectural materials and provides a focused review of the state of the art materials It also provides designers with the tools they need to evaluate and select from the thousands of different materials that are available to them The book is organized into three sections Time looks at how the materials used in architectural design have changed over the years showing how we have come to use the materials we do in contemporary design Materials covers all five material families metals polymers ceramics composites and natural materials giving in depth information on their properties behavior origins and uses in design It also introduces a review of the cutting edge research for each family Systems outlines the technical design orientated research that uncovers how new architectural assemblies can be designed and engineered All of this practical advice is given along with many real case examples illustrating how this knowledge and information has been and can be used in architectural design **Transportable Environments 3** Robert Kronenburg, Filiz Klassen, 2006 An overview of structures designed to be mobile their uses and the principles involved in their design including a consideration of the wide range of applications in which they can be found **A Topology of Everyday Constellations** Georges Teyssot, 2013-02-22 The threshold as both boundary and bridge investigations of spaces public and private local and global Today spaces no longer represent a bourgeois haven nor are they the sites of a classical harmony between work and leisure private and public the local and the global The house is not merely a home but a position for negotiations with multiple spheres the technological as well as the physical and the psychological In A Topology of Everyday Constellations Georges Teyssot considers the intrusion of the public sphere into private space and the blurring of notions of interior privacy and intimacy in our societies He proposes that we rethink design in terms of a new definition of the practices of everyday life Teyssot considers the door the window the mirror and the screen as thresholds or interstitial spaces that divide the world in two the outside and the inside Thresholds he suggests work both as markers of boundaries and as bridges to the exterior The stark choice between boundary and bridge creates a middle space an in between that holds the possibility of exchanges and encounters If the threshold no longer separates public from private and if we can no longer think of the house as a bastion of privacy Teyssot asks does the body still inhabit the house or does the house evolving into a series of microdevices inhabit the body *Joan Littlewood's Theatre* Nadine Holdsworth, 2011-04-14 This book investigates Joan

Littlewood's theatre productions and her community based projects and activism drawing upon extensive primary archival material

Summer of Love Christoph Grunenberg, Jonathan Harris, Jonathan P. Harris, 2005-01-01 Though more than a generation has passed since the revolutionary fervor of the Summer of Love of 1967 the 1960s in many ways seem with us still From recurring debates over the war in Vietnam to the perpetually appealing music of the Beatles and the Rolling Stone to the concern about youth drug use the legacy of the 1960s is ubiquitous in contemporary life The Summer of Love brings together an impressive group of historians artists and cultural critics to present a rich and varied interpretation of this seminal decade and its continuing influence on politics society and culture The Summer of Love which accompanies an exhibition at Tate Liverpool pays particular attention to the wildly creative psychedelic art of the era Perceptive essays on psychedelic comics graphic design and typography light shows and film successfully rescue psychedelic art from the fog of nostalgia and unjust critical neglect Distinguished contributors also explore the role of 1960s fashion and architecture and they consider anew the central influence of hallucinogenic drugs on the art of the era Running throughout the essays are the elements of epochal change from sexual liberation to student revolutions that still form the backdrop of our collective consciousness of the 1960s An incisive collection of writings on all aspects of 1960s art and culture tempered by time and critical distance The Summer of Love will be indispensable for those who wish they had been there or for those who were but can't remember it

Ordnance Gary A. Boyd, Denis John Linehan, 2013-01-01 Ordnance War Architecture Space investigates how strategies of warfare occupy and alter built and other landscapes Ranging across the modern period from the eighteenth century to the present day the book presents a series of case studies which operate in and between a number of settings and scales from the infrastructures of the battlefield to the logistics of the domestic realm The book explores the patterns forms and systems that articulate militarised spaces excavates how these become re-circulated and reconfigured within other domains and discusses the often ephemeral legacies and residues of these architectures

Dwell, 2002-08 At Dwell we're re-staging a minor revolution We think that it's possible to live in a house or apartment by a bold modern architect to own furniture and products that are exceptionally well designed and still be a regular human being We think that good design is an integral part of real life And that real life has been conspicuous by its absence in most design and architecture magazines

Art in America Frank Jewett Mather, Frederic Fairchild Sherman, 2002 Non-Representational Methodologies Phillip Vannini, 2015-02-11 Non-representational theory is one of the contemporary moment's most influential theoretical perspectives within social and cultural theory It is now widely considered to be the logical successor of postmodern theory the logical development of post-structuralist thought and the most notable intellectual force behind the turn across the social and cultural sciences away from cognition meaning and textuality And yet it is often poorly understood This is in part because of its complexity but also because of its limited treatment in the few volumes chiefly dedicated to it Theories must be

useful to researchers keen on utilizing concepts and analytical frames for their personal interpretive purposes How useful non representational theory is in this sense is yet to be understood This book outlines a variety of ways in which non representational ideas can influence the research process the very value of empirical research the nature of data the political value of data and evidence the methods of research the very notion of method and the styles genres and media of research
