Bone Marrow Failure Syndromes:

Aplastic Anemia and Other Bone Marrow Failure Syndromes Nasrollah T. Shahidi, 2012-12-06 During the past decade there have been numerous direct and indirect scientific contributions to both the etiology and therapy of aplastic anemia and related bone marrow failure syndromes Clinical observations such as autologous bone marrow recovery after conditioning with immunosuppressive agents for bone marrow transplantation failure to achieve engraftment in some identical twins without prior immunosuppressive therapy and hematologic response to immunosuppressive agents have led to the concept of immune mediated etiology of acquired aplastic anemia Such a concept was further strengthened by laboratory findings implicating the role of activated cytotoxic T lymphocytes and abnormal production of inhibitory lymphokines The immunologic mechanisms may also apply to the idiosyncratic bone marrow aplasias associated with drugs toxic chemicals and viruses These agents may alter normal cellular recognition sites by interacting with cellular components and result in loss of self tolerance Immunologic mechanisms have long been advocated in many other organ failures and the hemopoietic organ is no exception It is of interest that parallel clinical and laboratory investigations in juvenile diabetes mellitus type I and in rodent models of this disease have yielded results compatible with the same pathogenic mechanisms The infiltration of pancreatic islets by activated T lymphocytes functional and morphological alterations of islet cells upon incubation with lymphokines such as gamma interferon and tumor necrosis factor and clinical response to cyclosporine are a few examples

Bone Marrow Failure Gary M. Kupfer, Gregory H. Reaman, Franklin O. Smith, 2018-09-29 This book presents the latest scientific knowledge on inherited and acquired bone marrow failure syndromes describing the advances in understanding of genetics and pathophysiology that have been achieved as a result of high throughput DNA sequencing RNA expression studies and modern biochemistry techniques The full range of relevant conditions is covered including acquired aplastic anemia Fanconi anemia ribosomopathies telomeropathies dyskeratosis congenita Shwachman Diamond syndrome Diamond Blackfan anemia and congenital neutropenias and thrombocytopenias In addition it is explained how the study of these rare diseases has uncovered important new science and elucidated the pathophysiology of more common hematological and oncological diseases A treatment specific chapter describes options ranging from the conventional to the cutting edge
