Alcohol Abuse Geographical Perspectives:

Alcohol Abuse Christopher J. Smith, Robert Q. Hanham, 1982 Intended for geography professors students and researchers this publication explores some topics in the area of alcohol use and abuse that are potentially suited for geographical research There are four chapters Chapter 1 introduces some of the more familiar arguments for and against alcohol consumption The second chapter deals with the cultural context in which drinking occurs and reviews some of the geographical variations in drinking practices from both a global and a national perspective Chapter 3 discusses why people drink heavily and what happens when they drink to excess Also reviewed in this chapter are some attempts to estimate the spatial prevalence of alcoholism and other alcohol related problems in the United States The concluding chapter reviews some of the theories of alcohol use and abuse and examines options available for prevention and control A bibliography concludes the publication RM

Geography and Drug Addiction Yonette F. Thomas, Douglas Richardson, Ivan Cheung, 2008-09-24 Making Connections Geography and Drug Addiction Geography involves making connections connections in our world among people and places cultures human activities and natural processes It involves understanding the relationships and connections between seemingly disparate or unrelated ideas and between what is and what might be Geography also involves connecting with people When I first encountered an extraordinarily vibrant intelligent and socially engaged scientist at a private dinner several years ago I was immediately captivated by the intensity of her passion to understand how and why people become addicted to drugs and what could be done to treat or prevent drug addiction Fortunately she was willing to think beyond the bounds of her own discipline in her search for answers Our conversation that evening which began with her research on fundamental biochemical processes of drug addiction in the human body evolved inevitably to an exploration of the ways in which research on the geographical context of drug addiction might contribute to the better understanding of etiology of addiction its diffusion its interaction with geographically variable environmental social and economic factors and the strategies for its treatment and prevention This fascinating woman I soon learned was Nora Volkow the Director of the National Institute on Drug Abuse as well as the granddaughter of Leon Trotsky

Substance Use in a Comparative Perspective Arnošt Veselý ,Dagmar Dzúrová,2013-10-01 The book follows two main objectives First it aims at putting together different pieces of evidence on developments of substance use and risk behavior in five post communist countries over time Thus first objective is to build a complex and reliable empirical evidence base for empirical comparison and identify evidence gaps Second we try to analyze and interpret such developments using both quantitative and qualitative analysis and to relate them to the formulated theoretical framework Since available empirical evidence is often far from conclusive the findings presented are sometimes rather exploratory and should be tested by further and more detailed research The book is structured as follows At the beginning we review various factors that have been found to be associated with substance use We try to present them in a complex and systematic way and create a conceptual framework for understanding and explaining substance use in a comparative way Next chapter describes the developments of substance use over time in five countries analyzed This description is based upon publicly available WHO data along with supplementary comments and interpretations by national experts Next chapter is devoted to country profiles of all five countries involved in the project and in depth overviews of developments in their respective substance use situations All reviews are written according to the same structure thus facilitating comparison The last chapter presents a multilevel analysis of substance use in the Czech Republic combining data for individuals and regions **Examining the COVID Crisis from a Geographical Perspective** Sara Beth Keough,David H. Kaplan,2023-03-31 This book presents several perspectives on the COVID 19 crisis as it impacted the United States focusing on policies practices and patterns It considers the relationship between government policies and neo liberalism anti federalism economies of scale and material culture The COVID 19 crisis became the primary current event in the United States in March 2020 and continued for several years In the early days of the crisis the United States lacked a cohesive comprehensive approach to combating its spread As a result the pandemic was experienced differently in different parts of the United States and at different scales The chapters in this volume include both quantitative and qualitative explorations of the pandemic as it occurred in the United States Collectively they help the reader to better understand this geographically salient issue and provide lessons to learn from so as to improve upon responses to crises in the future This book will be of interest to students and researchers of Geography Sociology Political Science and Economics with an interest in United States and the socio political effects of the COVID 19 pandemic The chapters in this book were originally published as a special issue of *Geographical Review* COVID-19 and Similar Futures Gavin J. Andrews,Valorie A. Crooks,Jamie R. Pearce,Jane P. Messina,2021-06-19 This volume provides a critical

response to the COVID 19 pandemic showcasing the full range of issues and perspectives that the discipline of geography can expose and bring to the table not only to this specific event but to others like it that might occur in future Comprised of almost 60 short 2500 word easy to read chapters the collection provides numerous theoretical empirical and methodological entry points to understanding the ways in which space place and other geographical phenomenon are implicated in the crisis Although falling under a health geography book series the book explores the centrality and importance of a full range of biological material social cultural economic urban rural and other geographies Hence the book bridges fields of study and sub disciplines that are often regarded as separate worlds demonstrating the potential for future collaboration and cross disciplinary inquiry Indeed book articulates a diverse but ultimately fulsome and multiscalar geographical approach to the major health challenge of our time bringing different types of scholarship together with common purpose The intended audience ranges from senior undergraduate students and graduate students to professional academics in geography and a host of related disciplines These scholars might be interested in COVID 19 specifically or in the book s broad disciplinary approach to infectious disease more generally The book will also be helpful to policy makers at various levels in formulating responses and to general readers interested in learning about the COVID 19 crisis
