In Synchrony with the Heavens, Volume 2 Instruments of Mass Calculation David King,2005-06-01 This is the first investigation of one of the main interests of astronomy in Islamic civilization namely timekeeping by the sun and stars and the regulation of the astronomically defined times of Muslim prayer The study is based on over 500 medieval astronomical manuscripts first identified by the author now preserved in libraries all over the world and originally from the entire Islamic world from the Maghrib to Central Asia and the Yemen The materials presented provide new insights into the early development of the prayer ritual in Islam They also call into question the popular notion that religion could not inspire serious scientific activity Only one of the hundreds of astronomical tables discussed here was known in medieval Europe which is one reason why the entire corpus has remained unknown until the present A second volume also to be published by Brill deals with astronomical instruments for timekeeping and other computing devices **Astronomy in the Service of Islam** David A. King,2024-12-11 Based on a wide variety of previously unstudied sources these articles explain how science was applied to three aspects of Islamic ritual in the Middle Ages the regulation of the lunar calendar the organisation of the times of the five daily prayers and the determination of the sacred direction qibla towards the Kaaba in Mecca Simple procedures of folk astronomy were used by the scholars of religious law who determined popular practice more complicated mathematical methods were provided by the scientists and this proved a powerful incentive for the development of scientific analysis and research Some of these procedures were to have far reaching consequences For example the astronomical alignment of the Kaaba known to various medieval writers but long forgotten led to the adoption of similar alignments for the qibla and the final articles show how these were calculated whether from astronomical observation or geographical computation and their impact on the orientation of religious and secular architecture across the Islamic world C est partir d une grande diversit de sources inexplor es que ces articles expliquent comment la science avait t appliqu e a trois aspects du rituel islamique au Moyen Age la r gulation du calendrier lunaire l organisation des heures assign es aux cinq pri res quotidiennes et l tablissement de la direction sacr e qibla vers la Kaaba de la Mecque Des proc d s simples d astronomie populaire taient utilis s par les rudits en droit religieux qui d cidaient de la pratique populaire des m thodes math matiques plus complexes taient offertes par les hommes de science ce qui en effet s av ra tre une motivation puissante dans le d veloppement de l analyse et de la recherche scientifique Certains de ces proc d s eurent des consequences d une grande port e par la suite L alignement astronomique de la Kaaba pour ne reprendre qu un exemple connu **The Formation of al-Andalus, Part 2** Julio Samsó,Maribel Fierro,2019-10-23 These two volumes present a conspectus of current research on the history and culture of early medieval Spain and Portugal from the time of the Arab conquest in 711 up to the fall of the

caliphate They trace the impact of Islamisation on the pre existing Roman and Visigothic political and social structures the continuing interaction between Christian and Muslim and describe the particular development and characteristics of Muslim Spain al Andalus Together they comprise 38 articles of which 32 have been translated into English specially for this publication The first volume focuses on political and social history and looks in detail at settlement patterns and urbanisation the second examines questions of language and covers the brilliant cultural and intellectual history of the period **A Survey of Islamic Astronomical Tables** Edward Stewart Kennedy,1956 The source material for the study of medieval oriental astronomy consists of Byzantine Greek Sanscrit Hebrew Arabic Persian and Turkish astronomical and astrological manuscripts If one desires to build up a detailed picture of Islamic astronomy one can choose material from these available manuscripts Of these manuscripts it is possible to isolate a group of works the zijes A zij consists of the numerical tables and accompanying explanation sufficient to measure time and to compute planetary and stellar positions appearance and eclipses This paper is a survey of the number distribution contents and relations between zijes written in Arabic or Persian during the period from the 8th through the 15th centuries Illustrations Oversize *Recent Publications in Natural History*,1987

focuses on a curious astrological table for calculating the length of life of any individual The notion of the world centred on the sacred Kaaba in Mecca inspired both astronomers and proponents of folk astronomy to propose methods for finding the qibla or sacred direction towards the Kaaba their activities are surveyed here The interaction between the mathematical and folk traditions in astronomy is then illustrated by an 11th century text on the qibla in Transoxania The last three studies deal with an account of the geodetic measurements sponsored by the Caliph al Ma'mun in the 9th century a world map in the tradition of the 11th century polymath al Biruni alas corrupted by careless copying and a table of geographical coordinates from 15th century Egypt
