Alcohol And Hormones:

Alcohol and Hormones Ronald R. Watson, 2012-12-06 Alcoholism the oldest addictive illness remains a serious problem because of its major modifications of many physiological systems The genetic and neurological origins and mechanisms are complex and only partly understood However it is clear that alcohol use modifies the production of most hormones directly and indirectly modulating the systems that hormones regulate Acute and chronic alcohol consumption affects virtually all cellular functions of tissues like brain liver immune system and reproductive and endocrine organs The latter have major regulatory roles affecting many functions from development to reproduction Although stress can further modify alcohol's effects on hormone production it significantly causes most of alcohol's modifications of the body to occur via changes in hormone production and secretion Ronald R Watson vii Contributors Michael L Adams Department of Psychiatry Washington University School of Medicine St Louis MO Robert A Anderson Jr Ob Gyn Research Rush Presbyterian St Luke's Medical Center Chicago IL Kasibhatla Bhavani Molecular Hepatology Laboratory Massachusetts General Hospital Cancer Center Harvard Medical School Charlestown MA Theodore J Cicero Department of Psychiatry Washington University School of Medicine St

Welsh,1998-12 Presents a selection of articles on the effect of alcohol use on organ function Topics include alcohol s effects on liver function alcohol related pancreatic damage alcohol and the cardiovascular system alcohol s contribution to compromised immunity the hemotological complications of alcoholism the endocrine system and alcohol related hormonal imbalances impairments of brain and behavior alcohol s role in gastrointestinal tract disorders and alcohol s impact on kidney function Diagrams The Alcohol and Other Drug Thesaurus: Alphabetical index National Institute on Alcohol Abuse and Alcoholism (U.S.),2000 *Diet, Energy, and Hormone Regulation* Elaine J. Santino,2007-05-19 Past studies have been done on the effects specific foods have on the adrenal glands and other hormones This study is concerned with the combined effect that a well rounded healthy nutrient dense food program while eliminating the use of selected substances known to alter hormones such as alcohol caffeine soy hormone laced meat common allergy foods would have on the adrenal glands and specific hormones The

investigator studied six individuals that had never been on hormone replacement therapy and were on a less than optimal diet. One postmenopausal woman, four menstruating women, and one male volunteered to be test subjects. A salivary assay baseline was taken of the hormones cortisol, dehydroepiandrosterone sulfate (DHEA-S), testosterone, progesterone, and estradiol before they began the eight-week dietary change. Participants were given a list of approved foods and a list of foods during the eight-week program. They kept a detailed list of foods they consumed on a daily basis during the eight-week program as well as the week prior to the study when they consumed their usual foods. They reported in a detailed journal any changes in their energy, drive, bowel habits, and mood changes. At the end of eight weeks, the same salivary assay was taken of the five hormones, and the pre and post lab reports were evaluated. There was an increase in testosterone for five of the subjects and a slight decrease in the one test subject that was not 100% compliant. The male test subject was the only one that noted a substantial increase in drive in his journal. Even though four of the women test participants also had a rise in testosterone levels, they did not note an increase in their libido. Fifty percent showed a healthy increase in 8:00 a.m. cortisol. Four test participants began with erratic circadian cortisol rhythms. Of those four, three showed a return to normal circadian rhythms on the post-test. With respect to weight and body mass index (BMI), 100% lost weight and had a drop in BMI. There was no significant shift in DHEA-S, progesterone, and estradiol in all six of the test participants. Although the study period was short and there were only six participants, there was an improvement in adrenal function, an increase in testosterone, and a positive shift in weight and body mass index. A healthy, well-rounded, nutrient-dense food program can have a positive effect on the adrenal glands and the hormones they produce. Further investigation needs to be done in this area to see the effects a nutrient-dense diet would have on adrenal function and hormone production over a longer period of time and with a larger participant base.

Alcohol and Hormones, 1994. Discusses how alcohol can interfere with hormone actions and alter blood sugar levels, impair reproductive functions, and interfere with calcium metabolism.

Principles of Gender-Specific Medicine, 2004-07-02. Principles of Gender-Specific Medicine examines how normal human biology differs between men and women and how the diagnosis and treatment of disease differs as a function of gender. This revealing research covers various conditions that predominantly occur in men and as well conditions that predominantly occur in women. Among the subjects covered are cardiovascular disease, mood disorders, the immune system, lung cancer as a consequence of smoking, osteoporosis, diabetes, obesity, and infectious diseases. Gathers important information in the field of gender-based biology and clinical medicine, proving that a patient's sex is increasingly important in preventing illness, making an accurate diagnosis, and choosing safe and effective treatment of disease. Addresses gender-specific areas ranging from organ transplantation, gall bladder and biliary diseases to the epidemiology of osteoporosis and fractures in men and women. Many chapters present questions about future directions of investigations.
